What is needed is a spirit of defense that is not afraid of an offensive concept and, above all, a spirit that does not adopt the cringing mood of the appeaser.

Grimes Golden Apple

EXTENSION OF REMARKS OF

HON. ROBERT L. RAMSAY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. RAMSAY. Mr. Speaker, under general leave to extend my remarks, I include an article about that most de-

licious of all fruits, West Virginia's famed Grimes Golden apple. The article, prepared by my old friend, Samuel Jacob, whose farm is located near the site where the first Grimes Golden apple tree grew, was published by the Wellsburg Daily Herald, one of West Virginia's oldest newspapers. It follows:

GRIMES GOLDEN APPLE

The writer has looked over his scrapbooks and consulted several persons, among them Capt. William D. Grimes, a great grandson of T. P. Grimes, in regard to information asked by R. A. W. Sager, of Petersburg, W. Va., in a letter that came to your desk and was referred to me. Mr. Sager would like to know who the judge at Martinsburg was and when and by whom he was presented a gavel made from the trunk of a tree from which the Grimes Golden apple started on its way to fame. I am unable to answer other than to say that when the tree fell in the year 1900, after a known history of 100 years, gavels were made from its wood for the West Virginia Horticultural Society. Possibly the commissioner of agriculture at Charleston could find some record of the matter if addressed.

A column article clipped about 1900 from a Pittsburgh paper regarding the display of apples at the Land Show, Duquesne Garden, Pittsburgh, has a subheading "Grimes Golden a monument to Brooke County." The clipping is preserved by Miss Martha Hervey in memory of her father, Henry C. Hervey, who is quoted at some length. An extract is "I remember the tree for at least 50 years. When I was a boy the apples were prized and my recollection is that about 50 or 60 years ago people in this section began to plant grafted trees." He goes on to say that his father planted such an orchard and that people of the neighborhood would drive to the Wood's Nursery in Ohio for stock. If Mr. Sager will write to some descendant of Alex. Clohan he might get some light on whether a Martinsburg judge got a gavel at the time Mr. Clohan did. Here is a further quotation: "A few days ago at the meeting in Martinsburg of the West Virginia Horticultural Society H. W. Collingwood, of New York City, presented to the president of the society, Alex. Clohan, a gavel made from a piece of the original Grimes Golden apple tree."

Mayhaps some of the many people who have picnicked at the Grimes Golden wayside stop-off on Washington Pike would like to know more of its history that they might express a kindly thank you to the Franklin County Women's Club for its monument to an apple tree and to the State road commission for a good public service. Autolists from Cleveland, Detroit, and other far-off places have also thought well of the wayside cool spring water, benches, fireplaces, and majestic trees as they stopped on their way to or from Washington and Baltimore.

The appropriateness of a monument to the Grimes Golden apple tree appears to have been suggested by Mr. Fred Sanders to his daughter, Miss Margaret, as they stopped to water their horses at the old trough on the edge of the pike near the home at that time of Dr. J. W. Gist. Miss Sanders placed the matter before the Women's Club of Franklin. The ladies raised \$600 in a country community and prevailed upon the county court to appropriate \$600 more for a new trough and a modest monument which were put in place by a contractor from Washington, Pa. Mrs. Love Douglas presided at the public dedication September 27, 1922. Nat T. Frame, of Morgantown, was the guest speaker and little Betty Fowler sang a ballad composed by Mrs. F. E. Chapman about the apple. The program and a picture of the old tree are in a small box in the corner of the monument. Mrs. E. H. Fowler has the key. The

location is on a farm once the property of Thomas Peter Grimes and now owned by Mrs. Harry Kauffman and children.

When in the possession of Mr. Grimes there grew on the place a tree that bore luscious yellow apples. Prior to 1872 when the property was bought by Dr. J. W. Gist a seedling or a graft from this tree was carried by Mr. Grimes to the A. W. Wood farm nursery near Smithfield, Ohio. Mr. Wood developed and marketed the progeny from Mr. Grimes' tree and its fine flavor became so popular that other nursery men soon took up its production and made it probably the most widely known variety of apple in existence. Transplanting has been reported from Europe and South America, and the apple has long been a very considerable article of export to foreign lands.

The first mention I find of Mr. Grimes is that he was one of the incorporators of the Wellsburg and Washington Turnpike Co., when it met on September 22, 1821. One of the interesting resolutions adopted was that subscribers could pay for their stock in farm produce. Prices were fixed as follows: "Flour per barrel, \$8; whisky, from home stills, per gallon, 33¼ cents; fresh pork, per pound, 4 cents; oats per bushel, 25 cents; bacon per pound, 8 cents; wheat per bushel, 50 cents; corn per bushel, 33¼ cents; rye per bushel, 33¼ cents; potatoes per bushel, 33¼ cents; country linen or flax or tow, linsie and country-made cloth of every description at cash prices in Wellsburg when delivered." Throughout the secretary's book are records of payments in livestock, grain, whisky, etc., which in turn were paid to the contractors and they in turn paid their men in kind. My information is from an address by W. C. Gist on November 5, 1939, at the centennial celebration of the completion of the road. Mr. Gist's great-grandfather, Cornelius H. Gist, was the first president of the company and William Patton its secretary.

In decreasing purchasing power of money, increasing taxation, large additions to the stupendous public debt, and the threat of four more to the 20 years of rule by socialistic-minded politicians at Washington, can there be found a portent of going back to some kind of bartering as of old?

SAMUEL JACOB.

Broadcasters Vigorously Oppose Presidential Board for Review of Radio and Television Programs

EXTENSION OF REMARKS OF

HON. GEORGE B. SCHWABE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SCHWABE. Mr. Speaker, I am just in receipt of a letter from Mr. Jack Todd, director of the Twelfth District National Association of Radio and Television Broadcasters, in which he enclosed a copy of the resolution adopted by his organization in Wichita, Kans., September 28, 1951. In this resolution, the broadcasters vigorously oppose the presidential board for review of radio and television programs.

The resolution follows:

Whereas proposed Senate bill 1579 and the companion resolution, Senate Joint Resolution 76—the so-called Benton bills, authored and initiated by Senator WILLIAM BENTON, of Connecticut—would establish a presidentially appointed board of review

charged with reviewing the program performance of radio and television stations and reporting conclusions to Congress and the Federal Communications Commission annually, and

Whereas such procedure, in the view of the broadcasters of the twelfth district of the National Association of Radio and Television Broadcasters, would be contrary to guarantees expressed in the Bill of Rights, insofar as the proposed board would have the implicit power of censorship, and

Whereas the legislation, if adopted, would impose even further regulation upon a medium that stands as one of the important national guardians of free speech; and

Whereas such proposals are in contradiction of the rights of the people to a broadcast medium free of Government program surveillance; Be it

Resolved, That the members of the twelfth district of NARTE, in convention assembled, unanimously and vigorously oppose this legislation, and be it further

Resolved, That the NARTE president and staff continue their efforts to keep all broadcasters, members and nonmembers of the association, fully informed on this subject, and be it finally

Resolved, That copies of this resolution be sent to the chairmen of the Senate and House Interstate and Foreign Commerce Committees, to the chairman of such subcommittees as may be designated to hear testimony on these legislative proposals, and to the Senators and Congressmen of Kansas and Oklahoma.

"The Government Goes on TV—With a Vast Television Network Audience Including President Truman, Dr. John R. Steelman, the Assistant to the President, Each Sunday Presents His Battle Report, Washington, Program"—Arkansas Gazette, the Washington (D. C.) Post

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, I have been reporting, for more than a year, the National Broadcasting Co.'s telecast presented each Sunday by Dr. John R. Steelman, the assistant to the President.

This is the teledocumentary whereon John Steelman causes a report to be made to the American people on the most important news items of that particular week—and by the particular officials of Government most intimately and directly concerned with the subjects which they discuss.

Battle Report, Washington, is now recognized to be one of the most important and anxiously awaited television programs of the week. I have personally received thousands of letters from all parts of these United States telling me of the great appreciation which the writers have for the remarkable sacrifice which John Steelman makes in assuming this extra task in order to inform the American people with direct

and authoritative report on Government activities of the day.

Prior to the recess of Congress, I was called to my home in Mobile, due to the death of my brother Charles. While attending to that and related matters the House took a recess, and I remained in Mobile and thus skipped inserting into the CONGRESSIONAL RECORD the editorial scripts of the Battle Report, Washington, program for some 2 or 3 weeks.

In consequence thereof I received several scores of letters asking why I had discontinued making these insertions and their attending comments. Many wrote that they regarded John Steelman's activities and the statements of his guests on Sunday afternoons as the finest summary of news available to them from Washington, D. C. Practically all letters received made plea that I continue to extend my remarks and include therein each Sunday's telecast as I had been doing in the past.

In the course of the past 2 weeks, I have received a number of clippings from papers located in Arkansas, Oklahoma, Texas, and elsewhere throughout the Southwest, carrying a news item written by our friend and well-known member of the Press Gallery, Elizabeth Carpenter. Mrs. Carpenter and her husband, Leslie, serve as special Washington correspondents for a number of papers located in the southwestern section of the United States.

Her article on John Steelman—intimately and pithily written—disclosed the fact that—

The No. 1 fan of the program Battle Report, Washington—and a booster from the moment the idea was suggested at the White House—is President Truman himself. Each Sunday afternoon when he is at the Blair House or on the *Williamsburg*, the presidential yacht, the President switches the dial of his television set to hear the announcer say, "And first—the assistant to the President, Dr. John R. Steelman."

The President more than likely is apt to hear a last-minute fill-in on some important international development which he gave to Steelman a few hours before the program went on.

Mr. Speaker, it is altogether appropriate for me to tell you that this splendid telecast of Battle Report, Washington, is presented at one of the all-important hours on Sunday afternoon—by the National Broadcasting Co.—and without cost to any department of the United States Government. In the language of the day, "It's for free."

Dr. Steelman has delegated the liaison and managerial work of presenting this program to his able and capable assistant, Mr. Charles W. Jackson, while the National Broadcasting Co. has assigned to its production one of its topflight producers, Mr. Ted Ayers. The commentaries are by David Brinkley, an NBC television nationally known newscaster; its inimitable script is written by Lou Hazam, and the technicians assigned to the staff are the best electronics engineers available in the Nation's Capital, long noted throughout the world for their superior technical and scientific abilities.

In order that the millions of Americans that hear John Steelman each Sun-

day continue his personal global fight against the vicious forces of communism—and his friends elsewhere—presenting what has virtually become a veritable catalog of "Who's Who in Government" to his television audience—under unanimous consent to extend my remarks, I include therein two articles written by Mrs. Elizabeth Carpenter—one clipped from the Arkansas Gazette of Sunday, October 7, and the other from the Washington Post of October 11.

The articles read as follows:

[From the Arkansas Gazette of October 7, 1951]

THE GOVERNMENT GOES ON TV—GLOBAL FIGHT AGAINST COMMUNISM SHOWN THE NATION ON VIDEO BY ARKANSAS-BORN DR. JOHN STEELMAN, PRESIDENT'S ASSISTANT

(By Elizabeth Carpenter)

WASHINGTON—Howdy Doody has millions of kids watching him perform on television each weekday afternoon. Kukla, Fran, and Ollie relax the tired businessman each evening. But Dr. John Steelman, who becomes a television star on Sunday afternoons, has an audience that includes his boss, President Truman, many members of the Cabinet and other top Government officials, plus the great mass of people who want to see the latest "Battle Report, Washington."

The one-time sociology professor from Thornton who now is assistant to the President of the United States, corrals an array of topflight Government talent each week to give his audience an unbiased straight-from-the-horse's-mouth report on this Nation's fight for freedom.

But while Howdy Doody's annual salary is said to run into six figures and Kukla, Fran, and Ollie make approximately the same, TV Commentator Steelman's salary, for his performance, is \$0. He looks on it, he says, as a personal contribution to good government designed to let the people know, in a 30-minute briefing, what is going on.

"People are hungry for information," Dr. Steelman explains, "and it's a great thing to let them see the men who are running the Government and hear them tell in their own words the significant developments of the past week. It does a great deal to inspire confidence in the Government."

So, while Steelman and other Government officials perform free, the National Broadcasting Co. puts up \$1,000 to \$6,000 each week to pay the cost of producing a professional show. Some 50 technicians, artists, writers, and stage hands turn their talents to production of this 30-minute briefing.

In the gymnasium-sized studio, half a dozen television cameras wheel from one set to another while Gen. Omar Bradley tells the people why it costs so much to arm the country; Special Assistant Averell Harriman explains there are no easy answers to the Iranian oil difficulties; and such newsworthy guests as Robert A. Vogeler explain, in his hesitant, prison-marked manner, his treatment by Russians who kept him jailed in Hungary for many months.

The program has been on the air for 56 weeks. A list of the guests who have appeared on the show is virtually a "Who's Who of Government": Secretary of State Dean Acheson, Secretary of the Army Frank Pace, Publisher Oveta Culp Hobby, Gen. Jean de Latre de Tassigny, are typical of the guest artists.

No. 1 fan of the show and a booster from the moment the idea was suggested at the White House is President Truman himself. Each Sunday afternoon when he is at the Blair House or on the *Williamsburg*, the presidential yacht, the President switches the dial of his television set to hear the an-

nouncer say, "And first, the assistant to the President, Dr. John R. Steelman."

The President is apt to hear a last-minute fill-in on some important international development which he gave to Steelman a few hours before the show goes on.

This joint venture of Government and NBC into a television show was prompted by the enthusiastic response Dr. Steelman drew from a group of forums he held in Washington. In groups of 100, Steelman called business, labor, and civic leaders to the Capital to give them a briefing on what goes on here in the "citadel of confusion." This had been going on for 6 years and gaining momentum. Steelman served as moderator and coordinator. He gathered together the men from Government familiar with the big problems of the hour.

NBC came up with the suggestion that such a briefing could reach an even greater audience through television. Network officials approached Steelman and his assistant, Charles Jackson, who has had long experience in the big-time advertising field. Would Dr. Steelman undertake a similar Nation-wide briefing period each Sunday afternoon if given 30 minutes time on television by NBC?

Dr. Steelman liked the idea. So he carried the suggestion from his office in the south wing of the White House across to the Cabinet room and laid it on the table. The Cabinet liked it, too, but the warmest response came from the Chief Executive himself.

Being a man who has had first-hand experience in sending his popularity rating skyward through face-to-face contacts with people, President Truman recognized the value of showing the people the story of their country's problems and solutions over television.

Ted Ayres, a top production man for NBC, set about working out the format. He took 2 days off for thinking it out, and came back with the plan that the program still follows: a 5-minute introduction by Dr. Steelman, reports from the man handling the problem of the week in the Departments of Defense and State, newsworthy visitors, and films flown in from the Korean battle front. Throughout the reports, viewers are flashed mobile maps and other artwork illustrating the point under discussion.

Just how closely the TV audience watches the show was illustrated recently when Steelman wore a necktie with a picture of the United States Capitol on it. A raft of letters poured in commenting on "your new necktie."

In the 1 year that Dr. Steelman has been moderating the show, the number of television stations carrying it has increased from 7 to 13, and the audience has stretched from Maine to Florida, as far as Omaha, and is seen in the eastern area of Arkansas.

"The more the people know about their Government, the safer democracy is," Steelman says.

[From the Washington Post of October 11, 1951]

BATTLE REPORT—His AUDIENCE INCLUDES
MR. H. S. T.

(By Elizabeth Carpenter)

Howdy Doody has millions of kids watching him perform on television each weekday afternoon, Kukla, Fran, and Ollie get the tired businessman each evening. But Dr. John Steelman, a television star each Sunday (WNEB) at 3 p. m., has an audience including President Truman, members of the Cabinet and top officials, plus the great mass of people, who want to see the latest Battle Report, Washington.

The one-time sociology professor from Arkansas, now assistant to the President, corals an array of topflight Government officials each week to give the people an un-

biased straight-from-the-horse's-mouth report on the Nation's fight for freedom.

But while Howdy Doody and Kukla, Fran, and Ollie draw down a big salary, TV commentator Steelman's intake for the show is \$0. He counts it a personal contribution to good Government by helping let the people know, in a 30-minute briefing, what goes on.

"People are hungry for information," Steelman explains. "It's a great thing to let them see the men who are running the Government and hear them tell, in their own words, the significant developments of the past week. It does a great deal to inspire confidence in the Government."

While Steelman and other Government officials perform free, the National Broadcasting Co. puts up \$1,000 to \$6,000 each week to pay the cost of producing a professional show. Some 50 technicians, artists, writers, and stage hands turn their talents to this program.

In the studio at the Wardman Park Hotel half a dozen television cameras wheel from one set to another where Gen. Omar Bradley tells the people why it costs so much to arm the country; where special assistant Averell Harriman explains there are no easy answers to the Iranian oil difficulties, and where such newsworthy guests as Robert A. Vogeler explain in his hesitant, prison-marked manner his treatment by Russians.

The program, now under way for more than a year, has a list of guests which is virtually a who's who of Government. All Cabinet members have appeared at least once.

No 1 fan of the show and a booster from the moment the idea was suggested at the White House is President Truman. He looks in at the program whenever he's at Blair House, on the Williamsburg, or near a television set.

This venture of Government and NBC into a television show was prompted by the enthusiastic response Steelman had been getting from a group of forums of business, labor, and civic leaders, for whom he had been serving as moderator.

American Legion Votes No Confidence in State Department

EXTENSION OF REMARKS OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

MR. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an editorial that appeared in the Washington Evening Star on the subject of the resolutions adopted by the American Legion at its last convention in Miami, Fla. These resolutions condemned the State Department for its inefficiency and incompetency:

VOTE OF NO CONFIDENCE

There are two deeply disturbing aspects of the American Legion resolution condemning the State Department—the nature of the resolution itself and the lopsided majority by which it was adopted.

The resolution was a wild verbal shot in the dark. It called for the immediate removal of the present corps of State Department leaders whose "every action" has reflected incompetency, indecision, and defeatism. And it said that "they must be replaced and the State Department reconstituted with men of unquestioned loyalty and

high purpose . . . to the end that the confidence of all Americans in the conduct of our foreign affairs may be fully restored."

Here is the most sweeping kind of blanket indictment and condemnation. Instead of imputing particular failures to named individuals in the State Department, the entire "corps of leaders" is directly condemned as incompetent, and indirectly challenged on grounds of loyalty. Furthermore, a minority resolution deleting the criticism of the department was defeated, 2,881 to 131, and when District Commissioner Donohue tried to speak in defense of Secretary Acheson, his words were drowned out by boos.

It can be said that this is grossly unfair to the State Department leaders. They have made their mistakes, and it is proper that they should be charged with responsibility for those mistakes. But to denounce the entire departmental performance without any bill of particulars and without any specific identification of the alleged offenders borders on the fantastic.

Saying this, however, does not answer the more fundamental question of why the Legion so overwhelmingly approved such an extravagant denunciation of the Department. If delegates to the Legion meeting represented no one but themselves, the matter could be brushed aside. But that can hardly be the case. The attitude of the Legion delegates must be at least approximately in harmony with the attitude of Legion membership, and the members can hardly be wholly out of tune with sentiment in the communities in which they live.

If this is correct, then it follows that the delegates, in their expression of no confidence in the Department, spoke for a very substantial number of people in the country. The only other reasonable assumption would be that the Legion convention was stampeded by irresponsible leaders. That has happened before and it may have happened at Miami. In the absence of proof of that, however, it is difficult to avoid the conclusion that the persistent undermining of the State Department has been much more effective throughout the country than in Washington.

Moscow, the United States Air Force
Is Doing Things That Uncle Joe Stalin
Really Ought to See—There's a Lot to
Look at, if He Could Spare About 2
Weeks From His Job at the Kremlin"—
Howard M. Norton, London Bureau,
Baltimore Sun**

EXTENSION OF REMARKS OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

MR. BOYKIN. Mr. Speaker, as time goes on, more than ever I am convinced that the greatest single thing that this Congress ever did to insure the defense and security of this country was to create and establish the United States Air Force as a separate branch of our armed services.

While there seems to be a sort of self-imposed censorship effective insofar as factual information with respect to the accomplishments of the Air Force in the

United States is concerned, there certainly is no dearth of good news with respect to what we learn from foreign sources.

Mr. Speaker, I remember the time that Rear Adm. Robert Edwin Peary made his trip to the North Pole, and how, for months, the newspapers were filled with the stories of his exploration. To get from America to the North Pole has long been regarded as a feat comparable to getting to the moon, and yet, Mr. Speaker, but recently I read a little news item telling of how men of the United States Air Force now make three or four training flights each week over the North Pole. Landing their ships on the Arctic ice caps, they go through their Arctic survival exercises, get into their sleeping bags and spend the night in the open at temperatures which range from 75° to 80° below zero. Their training practice completed, they get back into their airplanes and return to home bases somewhere in Alaska, or even, per chance, to air fields in the continental United States itself.

Last night while scanning my New York Times, I noticed an article telling of how United States airplanes are already utilizing two bases in Africa, from which our long-range bombers, our heaviest transports, and the hottest jet fighters in the world will operate.

That article went on to say that from these bases the Air Force bombers will be able to strike at targets spread over half of the globe, and that the transports will be able to supply Army and Navy installations thousands of miles away. Six months ago, these bases were being planned. A few months later, construction was begun, and, now, they are being operated.

Mr. Speaker, these are but some of the exploits of men who believe that our land should be defended from the skies, and from skies over areas far removed from the habitable portions of the earth.

I have now come upon another article, by Howard M. Norton, of the London Bureau of the Baltimore Sun. This tells of United States Air Force bases in England—bases which range from tremendous bomber fields to compact ammunition storage dumps and radio stations—a great string of fighter and bomber bases which our men are keeping open day and night on the alert to accommodate a tremendous air armada in a matter of but a few hours should the need arise.

If war should come to Europe—

Mr. Norton reports—

huge bases in England are ready to serve as home to air units fighting all over the continent—four of them with landing strips and runways built to take the shock of our B-36's. Each is designed to accommodate comfortably a medium bombardment wing—45 to 50 planes (B-50's and B-29's) and 2,000 men.

Mr. Speaker, it is no wonder that Mr. Norton stated that if Joe Stalin should come to England—he would find a lot to look at because the B-50—our 1951 version of the B-29—is a ship which can make almost two round trips from England to Moscow and back without land-

ing and carry with them the biggest complement of atom bombs both ways.

When we think of the ring of air bases now built or being built around Russia and the satellite countries, we come to some real appreciation of what the Air Force has done to protect these United States, not alone at our coast lines and land borders but at all borders of our one great potential enemy.

It is in this manner that the infant service of the armed services of these United States is now carrying out the purposes which actuated the Congress to set up the United States Air Force to defend the peace and security of the Nation.

Mr. Speaker, in order that the Members of this Congress may have opportunity of reading this, the first of a series of air articles by Howard M. Norton, written in England, on The Growing Might of the United States Air Force in England, under unanimous consent to extend my remarks, I include the same in the RECORD.

Mr. Norton's first article reads as follows:

(By Howard M. Norton)

(This is the first of a special series of six articles by Mr. Norton on the growing might of the United States Air Force in England. Succeeding articles will run in the Sun this week.)

LONDON.—Here in England—just 1,500 miles from Moscow—is something that Uncle Joe Stalin really ought to see.

If he could spare about 2 weeks from his job at the Kremlin, and keep going 12 to 15 hours a day, he would have time enough for a quick look at most of the vast installations which the United States Air Force has quietly built up on this island in the last 3 years.

There is a lot to look at.

There are, for example, 26 bases and stations scattered over the length and breadth of England.

They range from tremendous bomber fields to compact ammunition storage dumps and radio stations.

Manning them today are well over 20,000 Americans in uniform, hundreds of civilian Americans and many thousands of Britons.

JUST A SKELETON FORCE

But even this huge chunk of manpower is only a skeleton force.

The string of great bomber and fighter bases which most of these men are engaged in building or keeping open, is designed to accommodate a huge air armada in a matter of hours if war should come.

Among these bases is one that covers 25 square miles—a base so big it would take several atom bombs to put it out of commission.

Stored at bases and stations in England are nearly a billion dollars worth of American supplies—everything from baked beans to bullets—enough to keep an air force fighting for many weeks without further help from home.

And the build-up of supplies is continuing as fast as storage space can be constructed.

Also set up and still expanding are great shops for the repair of damaged aircraft and engines.

If war comes to Europe, the bases in England are ready to serve as home to air units fighting all over the Continent.

Eight of the stations in England are now being used for operational flying.

And four big new ones are being built near the old university city of Oxford, with runways to take the landing shock of the B-36.

At each of these four new fields enough concrete is being poured to build an 18-foot road from Washington to Baltimore. And enough asphalt is being laid at each of them to carry the same 18-foot road on from Baltimore to Philadelphia.

Each is designed to accommodate, comfortably, a medium bombardment wing—45 to 50 planes (B-50's and B-29's), and 2,000 men.

When these bases were started, the plan was to close down most or all of the five old RAF bomber fields in East Anglia which the USAF is now using.

But that idea was quietly dropped; quietly because the left wing of the British Labor Party is getting extremely sensitive to further expansion of the American bases in England.

KEEPING SOME EAST ANGLIA BASES

Now, with the hearty consent of the RAF, the American Strategic Air Command intends to keep at least three of its East Anglia bases, and possibly all of them, even after the Oxford area bases are ready.

The Air Force isn't willing to pinpoint all the installations it has in England, but it admits to having, in addition to the five bomber stations in East Anglia and the four being built near Oxford, the following:

Two fighter interceptor stations permanently manned by the Eighty-first Fighter Interceptor Wing, flying the latest model F-86 Sabre jet fighters. These are at Bentwater and Shephards Grove, both in Suffolk.

One fighter escort station at Manston, near the mouth of the Thames, temporarily manned by the Twelfth Fighter Escort Wing, flying F-84 Thunderjets.

Two supply and maintenance depots (at Burtonwood and Sealand) near Liverpool.

One administrative flying station at Bovingdon, near London.

Two headquarters sites: the main one at Ruislip, about 12 miles from London, the other at Bushy Park, General Eisenhower's old headquarters in Teddington, on the Thames.

One personnel processing camp at Shaftesbury, 100 miles southwest of London.

One reconnaissance squadron, flying a half dozen four-jet RB-45's from fields in the north of England.

Three hospitals.

Roaring through the British skies on training missions this month are about 200 United States Air Force planes.

They are here as a result of one of the most important lessons learned in World War II—that air force units get rapidly more efficient after they have settled down at their overseas bases and adjusted themselves to conditions under which they have to fly.

UNITED STATES CREWS LEARNING TERRITORY

Thus, for the last 3 years, the Strategic Air Command has been familiarizing its crews with areas where they might have to operate.

The Pacific, Alaska, the Caribbean, Labrador, and England are the main regions this rotational training program has been concentrating on.

Forty-five of the latest model B-50 atom bombers are now in England as part of this training program.

These faster, higher-flying version of the old B-29 are flying practice missions that run as long as 23 hours (they could fly to Moscow and back in well under 12 hours). And from their British bases they are ranging as far afield as the Middle East.

Twenty-one of them have flown from England nonstop to Savannah, Ga. (4,240 miles) in the last 3 months—just for practice.

Working with the B-50's are 20 tanker planes, remodeled B-29's known technically as type KB-29P.

TANKER PLANES CARRY 6,000 GALLONS

These flying gas stations, their bomb bays bulging with nylon gasoline tanks, can make

a 5-hour hop, transfer 6,000 gallons of gasoline, then turn around and fly back again. They've given the bomber almost unlimited range. And to many Air Force leaders, they're the biggest thing that's happened since the development of jet power.

It is particularly important for these flying tankers to know their way around the skies over England and vicinity, for this island would be a big refueling base if war came to the European Continent.

Bombers flying from the United States might refuel over England and fly on to their advance bases—or to their targets—without having to land.

England is the only theater in the world where American forces of all services operate under the over-all command of the United States Air Force.

BURTONWOOD DEPOT SUPPLIES ALL

The big Air Force depot at Burtonwood is central supply headquarters for all American forces in uniform in the United Kingdom. It even provisions three United States Navy destroyers which call regularly at the port of Liverpool.

Top commander of the theater since the Air Force operations began in July 1948, has been Maj Gen. Leon W. Johnson, hero of the Ploesti oil field raids of 1943, and holder of the Congressional Medal of Honor.

When Johnson and his advance party of Air Force men came to England in 1948 his command was known as the Third Air Division.

But by May of this year, it had grown so big that the Third Air Division was elevated to the status of the Third Air Force.

At the same time a new air division, the Seventh, was created to help with the increasingly complex operation.

HOW DUTIES ARE ALLOCATED

Today the organization set-up is this:

Third Air Force, under General Johnson, does all the "housekeeping," supervises the construction work, supports the Air Force groups training in England, and keeps the bases in readiness for instant use in case of emergency.

Seventh Air Division, now commanded by Gen John P. McConnell, supervises the Strategic Air Command's training program and has operational control of all units sent to England temporarily for training.

The only combat air units directly under General Johnson's Third Air Force are the F-86 Sabre jets which arrived toward the end for August for "permanent" duty in England.

BATTALIONS FROM FORT MEADE

Also under Johnson's command is the Thirty-second Antiaircraft Artillery Brigade—an Army outfit—which was sent to England early in the summer to ease the strain of British antiaircraft forces which had been guarding all American stations here.

But all the materials they use are furnished and paid for by the British.

"This is the kind of cooperation that the North Atlantic Treaty Organization dreams about," one high-ranking American officer said recently.

COOPERATION BETWEEN FRIENDS

"If we hadn't had British help in the last 3 years, I don't know what we would have done. Of course, we're helping to protect them, but they've gone a lot further than their agreement in helping us, even when it meant sharing materials and facilities that were insufficient even for their own needs."

If old Joe Stalin could come over here and have a look around, one officer suggested, it might make some difference in his plans.

"And of all the things he'd see, probably nothing would impress him more than the open-handed, open-hearted, friendly cooperation between the RAF and the United States Air Force."

"He Went About Doing Good"

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KLEIN. Mr. Speaker, under leave of the House I am inserting as an extension of my own remarks an address delivered by the Honorable Oscar Ewing, of New York, Administrator of the Federal Security Agency, before a dinner meeting of commissioners of local housing authorities, National Association of Housing Officials in Washington October 10, 1951.

I particularly like the Administrator's quotation from the Bible—"He went about doing good"—for it gives scriptural authority for being a little less than our brother's keeper and a little more than a cold and selfish seeker after personal advantage.

SOCIAL ASPECTS OF HOUSING

(By Oscar R. Ewing, Federal Security Administrator)

A few days ago I came across some lines written a generation back by a great American named Jacob Riis. His words are probably familiar to all of you who are here tonight, but they seem to me to be so apt that they bear repeating. What Jacob Riis said was this:

"The most pitiful victim of city life is not the slum child who dies, but the slum child who lives. Every time a child dies, the Nation loses a prospective citizen, but in every slum child the Nation has a probable consumptive and a possible criminal."

Times have changed since that statement was made. We are beginning to make a real dent in the slums of America—partly because the people of this country have awakened to the essential truth of the warnings about the menace of bad housing, and largely because of the hard work and businesslike approach of citizens like yourselves. You as commissioners of local housing authorities have gladly accepted the responsibilities thrust upon you by your neighbors. You have taken on the job of making the way our people live better tomorrow than it was yesterday. You have a right to be proud of the progress you have made; and you, more than anyone else, have a right to point to the progress we must yet make. In a time of national emergency, you have an intimate knowledge of the way in which the pressures of international tension are already slowing up the steady American advance toward the goal of a decent housing for every family in the United States.

The complexities of our time have not yet made it possible for us to say that Jacob Riis' comments are merely ancient history—that they have no connection with 1951. They do have a very real connection, all too often. And Riis was very modern in his insistence on the intimate relationship between housing, health, and social behavior. We all recognize today that you cannot separate any one of these things from the others. We know there is not merely a relationship among them, but that they are all part of the same thing—that a nation cannot be free and prosperous and happy unless three-fourths of its people are well-housed, well-clothed, well-nourished, and, in the medical sense, just plain well.

The Federal Security Agency is the arm of the Federal Government responsible for carrying out laws affecting the health, the education, and the family security of the American people. Sometimes our critics describe our staff as do-gooders. I do not know

the origin of this phrase, as it applies to people who want to make America fulfill the great promise of its wealth and freedom; but I do know that one of the greatest single sentences in the Bible is this: "He went about doing good." I have enough religious feeling to believe that this simple description is worthy of emulation by lesser mortals.

Yet the curious fact is that doing good, in this sense, always means something more than doing the right thing, which, God knows, is a worthy end in itself. We have long since discovered that doing good means doing something which, in the long run, benefits ourselves. Sometimes the benefit merely rests in the satisfaction we may feel. There is a story about Abraham Lincoln, walking along a dusty country road in Illinois, arguing with a friend that no human being ever does anything except for selfish motives. As they were walking, they noticed a pig caught in a fence, squealing loudly, unable to move backward or forward. Lincoln glanced at the pig, walked on a few steps, and then suddenly broke away and freed the trapped animal. His friend was victorious. He asked Lincoln whether there was any conceivable selfish reason for having helped the animal. But Abe Lincoln had an answer for that. He said that if he had not done so, he would not have been able to sleep that night, and what could be more selfish than his desire for a good night's sleep?

We want decent housing for Americans, not only because the lack of such housing makes it hard for us to sleep at night, but also because we know that the safety, the security, the health, the prosperity, the very happiness of the entire Nation depends upon decent housing. Two years ago, in the 1949 Housing Act, Congress stated the basic aims of our national housing policy. Congress declared "that the general welfare and security of the Nation and the health and living standards of its people require . . . the realization, as soon as feasible, of the goal of a decent home and a suitable living environment for every American family."

I go along with that. I am sure you do, too.

Right now too many people in this country still cannot afford satisfactory housing. In spite of the prior demands of military defense, we must continue to recognize that the housing program is important, that, in the long pull, it is essential to our survival as a Nation.

Every health official in America, or anywhere else, knows that good housing and good health go hand in hand. For slums are not merely places where unfortunate people find themselves compelled to live. They are also the homes of the germ and the virus, of the disease-carrying insect, of the unsanitary conditions that breed ill health. They are the homes of preventable disease, of preventable death, of human suffering. And they are centers from which spread out the health threats to the rest of the community as well. I do not need to tell you, who are experts in housing, that there is a vicious cycle that must be broken—the cycle of poverty, of malnutrition, of ill health, of inadequate education, of low living standards, of crime and delinquency. This is where most of our greatest social dangers arise. You may have heard a good deal in recent months about the terrible dangers of narcotics addiction among young people. But you should never forget that the overwhelming majority of adolescents who become addicts are products of this very vicious cycle.

A striking example of how all these forces tie together—and of how the Federal Security Agency is concerned in them—has just reached the point of public attention. It involves not only housing and health, but also mental stability and even our national defenses. This is a research study in mental health for which I announced just yesterday a Public Health Service research grant of \$27,850. The problem which

this study will investigate is how the overcrowded living quarters in a boom town, and the lack of community health and education facilities and recreation outlets affect workers' emotional stability and productive output.

That is certainly a timely and most urgent question. But there is no novelty in what I am saying now. A man could sit in an ivory tower, surrounded only by books and papers, and arrive at these conclusions by the simple processes of elementary logic. But in our Agency we see the theory borne out by the realistic requirements of our work. We know from practical experience that—although poor housing itself is not solely to blame—it is the residents of poor housing who most need the assistance of the health, welfare, and education activities of the Federal Security Agency. As local housing experts, I am sure you will corroborate my statement that a disproportionately large amount of your local welfare and health services, along with the fire and police services of your communities, are expended in the areas of substandard housing.

You know, better than I, how the rates of crime and juvenile delinquency and disease go down among the residents of your low-income housing projects after they have moved out of slum dwellings. That is why the low-income housing projects that you operate, and the slum clearance and urban redevelopment projects which are under way, are stepping stones in our American drive to raise the living standards of the people of this country. Without this essential fulfillment of their need for a decent home which they can afford, it is hardly possible to see how people with low incomes could go ahead and improve their health, pay their debts, open a savings account at the bank, and become self-respecting, self-supporting citizens.

Since 1949 we have had an agreement between the Housing and Home Finance Agency and our Public Health Service, formalizing the working relationship that has existed between them for many years. This agreement defines the basic principles of collaboration between housing and health authorities all over the country. It says, "Appreciation of housing and environmental conditions is fundamental to a full understanding of the problem of community health, likewise, an appreciation of public health is fundamental to an intelligent and informed approach to the problems of housing and community development."

Let's translate that into facts and figures. Somewhere between thirty and forty million Americans are living, at this very moment, in the kind of homes that endanger their health. The 1950 housing census shows that we have 6,800,000 overcrowded dwellings and 3,400,000 dwellings that are both dilapidated and lacking in hot water, private toilet, or private bath. We have 5,300,000 dwellings, not recorded as dilapidated, but without private bath or toilet. We have 6,900,000 that have no piped running water. Then there are over twelve million dwelling units with no bathtub or shower, and nearly two million where the bath or shower facilities are shared.

These places are seedbeds of preventable disease, crime, juvenile delinquency—and, I may add, of possible dissatisfaction with the American way of life. They are also a drain on our national finances.

I think you may know that I have for some years been expressing my concern over the high cost of medical and hospital care in this country. I believe that the President's health program would go very far in solving the problems raised by these high costs. But I think there are other ways that will help solve those problems, too.

Let me give you an example. We all know how expensive hospital care becomes for

patients with prolonged or chronic illnesses. Even if these persons have money of their own, they must often go into debt to pay their hospital bills. If they cannot afford to pay the bills, then the community must do so for them. Either way, the cost is tremendous. Now, one reason for these great costs is that many people are compelled to stay in hospitals for long periods simply because they do not have decent homes to go back to. In the slums you hardly find a suitable environment for recovery and treatment. Without toilet facilities, without adequate heat in the cold months, without the chance for elementary cleanliness at home, they would be returning, not to good health but, in all likelihood, to worse health than before. So they must stay on in the hospitals until their doctors are ready to take the risk of saying that they are strong enough to withstand the dangers of substandard housing. Recent studies in home care for prolonged illness show that if we had decent housing the cost of hospitalization would be cut down immeasurably.

In the same way, better housing for less money will free a portion of limited incomes for better medical care, education, and food. Careful planning and site selection will strengthen the stability of the neighborhood, will reduce traffic hazards and accidents, will make possible better recreational facilities, and will improve facilities for water supply, sewage, and refuse disposal. All these are needed for an improvement in public health. And I have not even mentioned what may well be one of the most important health considerations of all—the advantages of security, of physical health, of well-being, of dignity and pride in establishing of conditions making for better mental health.

I notice that recent studies seem to indicate that one of the reasons for the increase of mental illness has been the steady increase in the number and proportion of older people among our population. One does not have to be a psychiatrist to understand why this may be so. The blunt truth is that we have only begun to understand how badly prepared we are for the revolutionary change that has occurred in the make-up of our population in America. More and more Americans are living longer. The implications of that simple fact are well nigh staggering. For it means that we are going to have to adjust our national habits to the census statistics. Today, without meaning to be cruel or unfair, we are still too prone to reject the older people among us. There is too often no place for them in our crowded lives.

I think that, in the next few years, you will find yourselves spending more and more time on the problems of housing for older people. Already it is rare to find families living in houses or apartments large enough to make room for the old folks. When you combine this with the fact that older people are three to five times more likely to suffer from long-term illness, and with the further fact that more than half the women over 65 are widowed and alone, and with the additional fact that advancing years usually mean a reduction in income, you can understand the scope of this growing problem.

I think most older couples want to live in homes of their own. I do not believe they want to be segregated in villages for older people exclusively. They prefer to live in neighborhoods familiar to them. In Denver, units for older people are scattered through apartment buildings and public housing projects. I think this is a good pattern.

But I believe we have much research to do, beyond this. We need dwelling places especially designed for the needs of our older people—places that will satisfy their need for higher temperatures, that will give adequate light for failing eyesight, that will

make it easy for them to get around without staircases and high thresholds, that will have floors which are smooth but not slippery, that will afford easy access to warm water, that will be especially fire-resistant, that will guarantee special safety for gas appliances when people begin to lose their sense of smell. These and a thousand other considerations will be needed by older people, and in the next few years it seems to me that we must speed up our planning to satisfy such needs.

By 1980 we may expect to have twice as many men and women 65 and over as we have today. We cannot wait for 1980 to be upon us before we start to adapt our housing to their requirements.

One thing you may well want to consider right now. Last year, at the request of President Truman, I called the first National Conference on Aging. At the conference we discussed the housing problems inherent in the aging population of the United States. We recognized the growing pressure on local housing authorities to provide for older people who are physically capable of maintaining homes of their own but cannot pay an economic rent. We also recognized that public housing accommodates a certain number of older persons in the natural course of providing housing for low-income families. But, as families mature and children leave, as a husband or wife dies, many authorities feel that a single person who is left should move out and make room for larger families.

The conference felt that public housing ought to include accommodations for all kinds of people within the accepted income limits. To make this possible, it was suggested that the term "family" might well be redefined so as to include single individuals as well as couples among the aging. I think this is going to be increasingly important as time passes. Changing a definition will not accomplish very much by itself, but as additional funds become available in the future it will be possible for local housing authorities to make use of the changed definition by making room for these people who are now being left out.

As a matter of fact, many States and local communities all over the country are setting up committees to study older people's needs, including housing, and to help them solve their problems. I would like to urge you, as housing specialists, to join these groups whenever you can. You have a great deal to offer them, and by working with these people from the public health, education, social welfare, nursing, and other fields, you can make real progress even though you are waiting for funds.

And what about the other end of the scale of years the children of America? Surely I do not have to ring the changes on importance of decent housing for the future of our children. Jacob Rlis said that the slum child who lived was worse off than the one who died. Well, I have been reading the recent study of infant mortality in Chicago's public-housing projects, published in our Children's Bureau magazine, *The Child*. The survey showed that babies living in these communities had a better chance for surviving that first and most dangerous year of life than did those in neighborhoods surrounding the projects. As a matter of fact, they had a better chance than all babies in Chicago, and a better chance than all babies in the 106 largest cities in America considered as a whole. The reason was not only good housing but good health facilities as well. The study described the adequate living space, better light and ventilation, daily garbage disposal, complete sanitary facilities, central heating, screens to keep out the summer flies. It talked about one project, Altgeld Gardens, with 4,000 children, where you will find a nursery school, an elementary school, a high school, a prenatal clinic and

an infant-welfare station operated by the city board of health, a branch of the public library, a church, a consumer cooperative, a community-activities building, and many playgrounds.

You know as well as I do that a community like this is not only going to have good housing and good health, but also happy, well-adjusted self-supporting residents. You know as well as I do that the child who lives there not only has a chance to stay alive, but also a chance to make something out of his life. When Jacob Riis made his dour comment, he was propagandizing for just this kind of progress. Our job, it seems to me, is to carry this progress forward. And I commend to you the suggestions in this field that were made last December at the 1950 White House Conference on Children and Youth.

Many of our aspirations as a nation have to make way temporarily for the pressures of the times. We aspire to a decent home for every American family. We aspire to adequate public housing that will meet the needs of all low-income families in America. We seek these things because they are good in themselves, and because they will strengthen the Nation as a whole.

But it is obvious that we are not going to be able to move ahead as rapidly as we would like. The shortages of materials, the diversion of funds for military and foreign-aid programs, the concentration on the very essentials of national defense—these take top priority. We can place the first blame on the men in the Kremlin for having slowed us up in our drive for a better life for the American people.

Yet, we shall have only ourselves to blame if we make the mistake of transforming temporary delays into permanent inactivity. Even yet we cannot tell whether we shall have to live through, not a year or 2 years, but a generation of emergency. If that happens, the needs that we recognize in housing, in public education, in public health, in social security, become themselves a key to the Nation's survival. We cannot fall into the trap, over the next 20 years, of dealing only with superemergency situations.

Recently we have had legislation for defense housing and community facilities and services, providing financial assistance for communities with critical needs created by the new situation. The job of administering this act has been given to the Housing and Home Finance Agency, along with the Federal Security Agency. This is important. But we would make a disastrous error if we thought it covered the whole job.

Over the long pull, the essential strengths of America will tell the tale of the ultimate victory of the free world. What are these strengths? Our devotion to freedom and democracy and the rule of law. Our religious faith. Our respect for the individual. These are spiritual things. Along with them, we have the physical strengths: Our capacity to work, and our great productive might. Our homes. Our health. Our knowledge. Our family security. Our readiness to accept responsibility for one another.

These are all abiding strengths. They can be the weapons which may very well win the world-wide struggle of ideologies for us without the need for unlimbering the terrible new weapons of our military arsenals. And what greater strength is there among these, except our faith in God, than the promise to every American, whoever he is, whatever he is, that his home will indeed be his castle, that it will be a good home, a safe home, a healthy home, a happy home, a home that stands as the very symbol of America? This is the promise you hold in your hands, as housing commissioners. You are to be congratulated for having a job that is so important, so good, and so right.

Utilization of Federal Employees

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. REES of Kansas. Mr. Speaker, I am advised at the present time there are over 2,500,000 employees working for the Federal Government. Although our country is at peace, this is an all-time high in the history of this country. It is estimated that the annual payroll for civilian employees during the next year will be more than \$10,000,000,000. It is equal to 16 percent of the total Federal revenues during the same year. In other words, with our revenues at the highest peak, one-sixth of the total amount is required to pay the employees in Federal service.

It is my view that if the Civil Service Commission, together with the heads of the agencies, would make a real effort to utilize its services and employment, the cost of civilian employment could be reduced as much as \$2,000,000,000.

For many years I have urged the Civil Service Commission to assume what I believe to be its rightful obligation under the Civil Service Act of 1893 and adopt an aggressive, forceful attitude in dealing with the personnel activities of the Federal Government. During the past several years, however, the Civil Service Commission has delegated many of what I believe to be its duties and responsibilities to the departments and agencies of the Government. This has had a serious effect upon Federal personnel administration and has produced inequities, violations of the Veterans' Preference Act and, in many instances, a complete disregard of the merit system. This neglect by the Commission has resulted in waste and inefficiency and is contributing to low morale among the rank and file of Federal employees in the Government service.

It is my opinion that in view of the salaries and wages now being paid to Federal employees, the public is entitled to the best of service. It is my belief that nothing should stand in the way of greater efficiency and economy in the Federal Government. I believe also that most employees want to render that service.

I am concerned with respect to the increased Federal employment that is presently planned for the remainder of the fiscal year. One agency alone, I am advised, wants to add 10,000 more employees to its payroll. By wise and judicious spending, I believe that the additional cost for salary increases can be absorbed by the departments and agencies of Government without additional appropriations. I also believe that with proper utilization of employment, additional workers are not necessary.

Many Federal employees have complained to me recently concerning the lack of a uniform personnel policy in the Government service. Personnel offices

are engaged in recruiting key personnel from other departments and agencies and this pirating is causing confusion and is producing inefficiency. The turnover by reason of the transfers between agencies is at an all-time high. This chaotic state exists because the Civil Service Commission lacks the courage and foresight to deal with the problem adequately. The Commission should be more than merely a policeman. It should prevent personnel abuses and require the departments and agencies to adhere to a uniform, consistent and basic personnel policy which recognizes the Government as a single employer. As matters now stand, certain departments and agencies make raids on the personnel of other departments and agencies.

If the heads of these agencies and bureaus would look around and alert themselves to their responsibilities as I think they should, they would find that in many places there is a duplication and multiplication of effort that is unnecessary, and they would also find that there is a considerable amount of overemployment in many places. Another thing they will find if they look around into the matter is that in many places employees are devoting a lot of time writing up job sheets in efforts to be put in higher grades, rather than follow the procedure of acquiring these positions in regular order. Along with that, they will find a lack of uniformity in job descriptions which causes one agency to employ persons at higher salaries than they would receive in other agencies performing the same work.

The numerous boards of examiners which have been created in the departments and agencies are further examples of waste of Federal funds. This practice should be eliminated and the Civil Service Commission should conduct examinations for most positions in the Government as it was originally intended to do. Continual violations of the Veterans' Preference Act must be stopped. An effective Government-wide promotional policy should be developed.

The Federal Government pays salaries equal to or in excess of those paid for similar work in private industry. It becomes the obligation of the executive branch to improve Federal personnel policies within the framework of civil-service law. Although the present national emergency has made it necessary to employ persons on an indefinite basis, there is no reason why the merit civil service must be scrapped. I believe that in times of national emergency, as well as in normal times, it is important to observe basic principles. These principles have not been followed for the past 10 years in the Federal civil service. I am hopeful that immediate action will be taken by the Civil Service Commission and the President to correct this situation.

I also call upon the heads of the various agencies, bureaus, and commissions to see to it that the personnel in Government service is utilized in every way possible, and that improvements for the betterment and for the efficiency of our

Government are made effective everywhere it can be done, and in addition thereto, see to it that the best possible service by all employees is rendered to the American people of this country. The public is entitled to it.

**Statement of Hon. Harry P. Cain, of
Washington**

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement relating to Senate bill 458, introduced by me on January 15, 1951.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Mr. President, on January 15, 1951, I introduced Senate bill 458, directing the Secretary of the Interior to issue a patent-in-fee to Marie James Wilson, of Tacoma, Wash., to lands allotted to her on the Quinalt Indian Reservation in the State of Washington. Before introducing this bill, I made an exhaustive investigation into the matter as to whether or not this Indian is qualified to handle her own affairs and if it would be for her best interest and all concerned that a patent-in-fee should be issued. As a result of my investigation into this case, I am firmly convinced that the Bureau of Indian Affairs, by refusing to issue to her a patent-in-fee to her allotment so that she would be able to negotiate for herself a sale for her land and timber, has caused her grievous injury to body and mind, and is, by such action by the Indian Bureau, deprived of proper medical care and proper food and clothing.

Mrs. Wilson has not at any time lived under the Indian Bureau. She is an educated woman of the age of 42 years, she has been married, but is divorced from her husband and is now being dependent upon the State of Washington for relief assistance and is living with her relatives. She was educated in the public schools and business colleges in the State of Washington, and after graduation was employed for many years as a stenographer and bookkeeper. Mrs. Wilson is now in such a physical condition that she is unable to work for her livelihood and is compelled to depend on State relief and live with her sister who is 64 years old and who subsists on a Spanish War widow's pension of \$40 per month. Such a condition exists because of Indian Bureau policies. Although Mrs. Wilson is possessed of property valued at approximately \$30,000, the Indian Bureau, by its policies and its bureaucratic schemes, are cheating this woman out of thousands of dollars, and defrauding the State of Washington out of large sums of money by reason of the fact that this Indian woman is compelled to keep her land in a trust status so that the State of Washington cannot collect or be reimbursed for relief money paid to this Indian citizen, either during her lifetime or from her estate in case of her death.

Surely the Indian Bureau will permit Mrs. Wilson to sell her land to another Indian, by doing so, this land would remain in a trust status, and if this land is sold to another

Indian, Mrs. Wilson would be compelled to sell her allotment for a price far less than its worth. The price of \$10,000 has been declared as its value by the Indian Bureau and that is the price which another Indian would pay, which is an approximate loss of \$20,000 to Mrs. Wilson. If this land is owned in fee by Mrs. Wilson, which is her wish, she would be able to negotiate for herself for the sale of the timber on her allotment. She states that she now has an offer for her timber, which offer would realize to her from \$25,000 to \$30,000. She also states that if she is permitted to handle such transaction herself, she would not be compelled to pay out of the proceeds received from such sale 8 or 10 percent to the Indian Bureau for its alleged administration costs for handling such sale for her. If the fee title of this land is in Mrs. Wilson or disposed of by her, this land would go onto the tax rolls of the county and State, and the State of Washington would be reimbursed for the relief money which it has expended for and on behalf of this citizen.

In a recent letter which I have received from Mrs. Wilson, among other things she states:

"For the past year, I have been and am now destitute. I have been unable to work because of my physical condition. I have used up all my savings. I made application for relief in Tacoma, Wash., and for 2 months received food vouchers of \$20.95 per month and no other assistance. The welfare office wrote to Taholah Indian office in regard to me, and the Indian office advised the welfare office that they were trying to sell my allotment and that I was a ward of the Government of the United States. For these reasons, the welfare office cut off all assistance to me and said that I must look to the United States for assistance since I was a ward of the Government.

"I have been trying to get help from the United States through the Taholah Indian office since February 1947, without any success whatever. Three and one-half months ago, I was advised by the Indian office that I could sell my allotment to another Indian. I offered to sell the same at a sacrifice to Frank W. Law of Taholah, who is an Indian. Mr. Law obtained a description of my land from the office, but has never tried to make a deal with me for the purchase of my land, although I have contacted him many times. Mr. Law is not interested in buying my allotment, nor am I able to sell it to any other Indian that I know of.

"At the present time I am staying with my widowed sister, Mrs. Yerkes, who is 64 years of age and is the widow of a Spanish War veteran, and subsists on a Spanish War veteran widow's pension of \$40 per month. I have no place to stay except with Mrs. Yerkes and she has no home of her own. We are living with her son, Chester Millett, in Tacoma, Wash., and there are six of us in the household, and we are really imposing on Chester Millett to be staying with him. There are many times when we do not have enough or anything to eat, and I am supposed to be on a special diet of fruits and juices because of my kidney operation.

"I have made application to private charities, such as the Red Cross, for assistance, but I am always given the same answer, that since I am a ward of the United States, and have lands of my own, I should get my help from the United States.

"At the present time I am absolutely destitute, I have no money to buy food; I have no property except my Indian allotment, I have no clothes except the clothes that I am wearing. I am sick and unable to work and I will not be able to get well unless I can have money to buy proper food.

"I earnestly and respectfully request the Government of the United States to fulfill its duty to me as my guardian, and issue a fee patent to me for my land."

Mrs. Wilson first applied to the Indian Office for a patent in fee to her land in September 1947, but ever since that time, through its devious New Deal and Fair Deal methods, the Indian Bureau has continued to refuse to afford her relief. Mrs. Wilson is now destitute and living in poverty, although she is possessed of property which she can, if permitted to sell, realize from \$25,000 to \$30,000, which amount would be sufficient to care for her during the balance of her life.

The claim of the Secretary of the Interior and his Indian Bureau that this land is situated so that it must be operated as a unit with other allotments is indefensible. This 80-acre tract of land is situated one-fourth of a mile from a State highway and Mrs. Wilson has a 40-foot road right-of-way from the State highway to her allotment. Two Indian allotments adjoining Mrs. Wilson's allotment are being, or have been, logged off by the Indian owners so the contention of the Indian Bureau that the issuance of a patent in fee to Mrs. Wilson's allotment would be detrimental to all Indian owners within the unit is fallacious, and such a statement by high officials of our Government has no place in the dealings with our Indian citizens or any other citizens. It shows lack of candor, lack of honorable and fair dealing. It is a case of deliberate action on the part of the Indian Bureau to distort the facts and conceal the true facts from the Congress, it shows an utter disregard for duty and reflects a contempt for the legislative branch of the Government.

I am among many who believe that the Indian Bureau has outlived its usefulness and should be abolished, but how can we get rid of this cancerous octopus? Demands for the abolishment of the Indian Bureau have been made in the past decade and longer, but the Indian Bureau seems to thrive on such demands, it seems to get stronger and more entrenched.

The declared policy and goal of the present Department of the Interior is "to bring about acceptance and full recognition of the Indian as a citizen of the State in which he resides with all the rights and privileges extended to other citizens, and also with the responsibility and duties of such citizenship."

Such a declaration, in my judgment, is simply some more lip service.

The investigating staff of the House Committee on Appropriations recently asserted:

"In general terms the effectiveness of the management of the Bureau (Indian Bureau) may be evaluated from the single statement that although the Bureau has, for many years, given lip service to the principle that its activities were pointed toward the eventual withdrawal of Federal supervision over Indian activities, the accomplishments have been nil."

The House Committee on Appropriations, in its recent report dated April 20, 1951 (H. Rept. 339, 82d Cong.), made the following declaration:

"The committee feels that increasing emphasis must be placed on active, tangible progress toward the assimilation of Indians into the general population. Unless this is done, the Indians will inevitably continue in their dependent status and will never be able fully to enjoy the privileges and opportunities of American citizenship."

Similar declarations of this House committee have been made practically annually for the past several years, however, such declarations apparently have left no impressions upon the Indian Bureau.

Perhaps the Indian Bureau regard such declarations by the House Appropriations Committee as "lip service" as that committee adopted a certain proviso contained in the appropriations bill on which it is said

report (H. Rept. 339, 82d Cong.) was made, the proviso reads:

"Provided, That in addition to the amount appropriated herein, tribal funds may be advanced to Indian tribes during current fiscal year for such purposes as may be designated by the governing body of the particular tribe involved and approved by the Secretary."

This language has the effect of transferring the authority of the Congress to disburse such tribal funds to the Indian Bureau and its puppet tribal councils.

I shall cite you a case which happened to meet my constituents and the State of Washington.

Mrs. Lola M. Kiralfy of Spokane, Wash., a member of the Colville tribe owned an allotment situated within the boundaries of the Colville Indian Reservation, consisting of approximately 110 acres of land, which land is surrounded by white-owned land and no Indians living within several miles of it. Mrs. Kiralfy made application to the Indian Office for a patent-in-fee so that she could dispose of same. The Indian Office refused to issue to her a patent-in-fee claiming that the land was situated in an area which consisted of Indian-owned lands, which statement I am reliably informed is not true. However, on March 15, 1951, I introduced a bill, S 1153, directing the Secretary of the Interior to issue to Mrs. Kiralfy a patent-in-fee to her allotment. Presumably, the Indian Bureau could not make their claim good that this land was not an isolated parcel of land, and since the Indian Bureau, together with its puppet tribal council, have control over the tribal funds of the Colville Indians, amounting to the sum in excess of \$1,000,000, the Indian Bureau and its puppet tribal council, I am reliably informed, doubled the price which was offered by the white man, and refused to accept the white man's bid, even though the white man was willing to meet the higher bid, and now this land will remain in tribal ownership and non-taxable, thereby the bureaucrats continue to entrench themselves at the expense of the Indians and the taxpayers, and this was done without the consent or the knowledge of the Congress.

Such a provision as the Appropriations Committees of the House and Senate have permitted to become a law is detrimental to the welfare of the Indians and the taxpayers. If such a change in the policy in the use of tribal funds was contemplated, I submit that such proposed legislation should at least have been considered by a legislative committee. I am convinced that a legislative committee, where such proposed legislation could have been given full and proper consideration, would not have approved of such a policy.

The Indian Bureau continually comes before the committees of Congress with pleas for money and authority to use tribal funds to purchase additional lands so as to square up or block up the lands it now controls in order to make these landholdings simpler to administer. These bureaucrats always profess they can simplify their management problems if they could only get more land under their control. They never can see that their problems would be lessened and simplified if they disgorged themselves of part of the vast land holdings over which they now hold dominion.

Mrs. Wilson is an intelligent, educated woman and has not overlooked any effort to obtain relief from her present situation, such as appealing to the National Congress of American Indians, through Mr. Frank George of the Colville tribe, Nespelem, Wash., and appearing in person at its annual convention held at Bellingham, Wash., in the month of August 1950, but such efforts were

to no avail. I am informed that the Congress of American Indians is supposed to have for one of its objects to assist Indians with their problems. However, I am also informed that this organization was organized by Indian Bureau employees and ex-employees, and is practically an adjunct of the Indian Bureau, like Mr. Frank George, one of its vice presidents, is an Indian Bureau employee at the Colville Indian Agency of Colville, Wash., and one who does things for it. I fear this intelligent woman was ill-advised when she appealed to Mr. George and the Congress of American Indians for help.

Personally, I see no hope for the Indians nor the taxpayers so long as the present administration is in power with its impractical, visionary and socialistic planners, with the Ickes, Colliers, Cohus, Bronsons, James E. Currys, National Congress of American Indians, and other such Indian Bureau infused organizations, dictating the administration's policies. But, what do you expect when Mr. Truman refused to turn his back on such people. What we need is a Republican administration which will turn the rascals out.

I mailed a copy of the report of the Secretary of the Interior dated April 2, 1951, on Senate bill 458 to Mrs. Wilson with the request that she fully state the true facts concerning this matter, and I submit for the Record a copy of said Secretary of the Interior's report and the letter addressed to me from Mrs. Wilson dated May 26, 1951. The letters are as follows:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C. April 2, 1951.

Hon. JOSEPH C. O'MAHONEY,
Chairman, Committee on Interior and
Insular Affairs, United States Senate.

MY DEAR SENATOR O'MAHONEY: Reference is made to your request for a report on S. 458, a bill providing for the issuance of a patent in fee to Marie James Wilson.

I recommend that the bill be not enacted. The bill authorizes and directs the Secretary of the Interior to issue to Marie James Wilson, Quinalt allottee No. 1339, patent in fee to her 80-acre allotment on the Quinalt Indian Reservation, described as the east half northeast quarter section 15, township 23 north, range 11 west, Willamette meridian, Washington. This tract of land has valuable timber on it, appraised at about \$10,000, and is located within the Crane Creek timber sale unit. This unit was recently offered for sale, but the successful bidder failed to execute the contract and his deposit was forfeited and distributed among the allottees, Mrs. Wilson receiving \$274.13. Plans are under way to readvertise the entire unit, and if it is sold, Mrs. Wilson will be paid a part of the purchase price immediately and the balance in accordance with the terms of the sale.

Timbered lands must be administered, logged, and operated as a unit in order to make them attractive to the lumber companies and to bring the best prices for the owners. The issuance of fee patents to scattered tracts throughout a unit would be detrimental to all Indian owners within the unit and might result in sales at prices below the appraised values.

In the interest of Mrs. Wilson, of other members of the tribe who have holdings within the sale unit, and of the tribe it is not advisable to issue patents to individual tracts within the timber sale unit.

The Bureau of the Budget has advised that there is no objection to the submission of this report to your committee.

Sincerely yours,
DALE E. DOTY,
Assistant Secretary of the Interior.

TACOMA, WASH., May 26, 1951.
Hon. HARRY P. CAIN,
United States Senate,
Committee on Armed Services,
Washington, D. C.

MY DEAR MR. CAIN: Am replying to the adverse report made by the Secretary of the Interior to the Senate Committee on Interior and Insular Affairs in regard to my Senate bill 458, providing for the issuance of a patent in fee to lands allotted to me on the Quinalt Indian Reservation. I hope to prove in the following paragraphs that such a report from the Secretary of the Interior is erroneous, and I can easily prove my statements.

To begin with, I, Marie J. Wilson, am 42 years old, a member of the Quinalt Tribe, three-fourths degree Indian blood, and having an allotment (No. 1339) consisting of 80 acres of timber on the Quinalt Indian Reservation, situated at location as follows: The east half of the northeast quarter of section 15, in township 23, north of range 11, west of the Willamette meridian, Washington. The land described is one-fourth mile off State highway and is in what the Indian Bureau calls the Crane Creek unit.

I am a divorcee; I attended public school 9 years. I graduated from the eighth grade at Park Avenue School in Tacoma, Wash. I completed ninth grade at Weatherwax High School, Aberdeen, and an 8-month business course at the Grays Harbor Business College in Aberdeen, Wash. In 1928 you didn't have to be a high-school graduate in order to go to business college. I worked as a bookkeeper and typist for a number of years, during the Second World War, I was a shipping clerk in a furniture factory in Tacoma, Wash., and up to the day I was stricken on my way to work I had been a floorlady at a large frozen-food plant at the port of Tacoma, at Tacoma, Wash., having under my jurisdiction approximately 54 women.

June of 1946 I was struck ill with tuberculosis of the left kidney which I had removed at the Tacoma Indian Hospital. I have had an additional three more operations to date. When I was stricken ill I had a savings account and a number of war bonds saved. I lived off my savings until they were exhausted, thus forcing me to apply to the Pierce County welfare for aid. After 3 years, the Tacoma Indian Hospital advised me that they could not help me further, as in my case I needed specialists. I went to the welfare and they gave me my doctoring and medication to a certain extent, until May 1, 1951, when they discontinued it due to lack of funds. I am being cut 25 percent of my check the 1st of June 1951, leaving me a balance of \$51 a month for room, food, doctoring, and medication, which simply can't be done. I first wrote to the Taholah Indian Agency, February 1947, and stated my circumstances and asked for assistance of some kind. I have appealed to the Department of the Interior directly in Washington, D. C., to the Commissioner of Indian Affairs, and the Secretary of the Interior, but all the assistance I received was a promise to help me in the near future.

I first wrote you, Mr. CAIN, January 1949, asking for help in my case. In June 1950, I wrote to the Governor of our State and asked him to intercede for me to the Bureau of Indian Affairs, being I was taken care of by the State. Governor Langlie then appointed Mr. William K. Moores, Assistant Director of Social Security to help me in any way or form. I was granted an audience at the State capitol July 1950, and stated my case.

Mr. Moores and I attended the National Congress of American Indians at Bellingham, Wash., August 1950, and met Justice N. B. Johnson of Oklahoma City. I also met D. S. Myer, Commissioner of Indian Affairs, and

I stated my case to him, but as usual I received no help.

The Secretary of the Interior, in his adverse report, states that the Crane Creek unit was recently offered for sale, but failed to execute its contract, thus forfeiting the deposit money and paying me a sum of \$274.13. The unit was sold September 23, 1949, to Rayonier, Inc., at Hoquiam, Wash., the deposit was \$163,000. Two extensions of time were granted to Rayonier, Inc., by the Secretary of the Interior, the second extension expiring April 12, 1950. On November 16, 1950, I received \$274.13 from the forfeiture money, but what the Secretary of the Interior failed to add to his report was that I owed the United States Treasury the sum of \$180 for a reimbursable loan, and which the Indian Bureau so generously held out of the said \$274.13 (U S Treasury check No 41,276, November 16, 1950, symbol 892,224), leaving me a balance of \$94.13. How long does the Secretary of the Interior think this will last?

The Secretary of the Interior also reports that plans are under way to readvertise the entire Crane Creek unit and, if sold, I would receive a part of the purchase price immediately and the balance in accordance with the terms of the sale. In my case, I don't agree with a unit sale, and here are my reasons: The Secretary stated my tract of land was appraised at \$10,000. I have a buyer in Seattle, Wash., who has had his cruisers up on my claim and stated that I could easily get between \$25,000 and \$30,000 for my timber, and have offered me the same, if I were granted a patent in fee. My buyer would advance me \$10,000 and pay me as they cut the rest out. They are ready to move in just as soon as I get my fee patent. Can the Indian Bureau do as well for me and not keep me waiting? The cruise on a large-unit sale is based on standing timber, and a 1917 cruise at that. My allotment is half wind-blown; therefore, the cruise on the remaining standing timber wouldn't warrant a very large down payment. Indian Bureau advocates 25 percent down payment, which, in my case, would be approximately \$2,500, at the Secretary's own figure as to the valuation of my allotment. Then the forestry department in the Hoquiam office would then take out 8 or 10 percent for expenditures of handling contracts, cruisers, etc. Time the Indian Bureau deducted everything, I wouldn't have enough left to buy me a one-room house. If I did find one that cheap, then I'd be forced to go back on the Welfare for another 6 years until I received another payment on my claim. I'd be right back where I started, only difference would be I'd have a home to mortgage to the Welfare while they took care of me. I have a permanent disability and cannot work.

The Secretary of the Interior also stated that an issuance of fee patents to scattered tracts throughout a unit would be detrimental to all Indian owners within the unit. Again I disagree with the Secretary in regard to my own allotment. My allotment is situated one-fourth mile off the State highway. I have a lifetime 40-foot right-of-way directly to my claim. The right-of-way contract is held at the Hoquiam office, it goes through two of my nephews' allotments or parts of it. I started building a road in 1934 and my nephews have finished it practically to my southwest quarter of my land. One of my nephews, Censur J. Yerkes, has logged most of his own claim and part of his brother's, which is next to mine. The allotments I would have to go through are nearly logged or salvaged. The allotment on the southwest side of my claim has been salvaged, so therefore I wouldn't be breaking up forest lands, in fact the Indian Bureau has let three allotments joining mine to log and salvage, there if it's so detrimental to all Indian owners, to use the Secretary's own statement, why did the Indian Bureau let the three owners log? Two of the owners

being my own nephews? My nephews didn't just salvage, they took out green timber, over \$8,000 worth, and the Indian Bureau didn't stop them. What's more, the Indian Bureau didn't receive one cent for stumpage, but the owner kept same. How about those same three claims, aren't they being detrimental to my own allotment? Surely the Secretary of the Interior should have received more information on my case before committing himself as I don't make an accusation unless I can prove my point.

How about the order No. 420, which was approved August 14, 1933, by Harold L. Ickes, then Secretary of the Interior, precluding further sales of Indian allotments, issuance of fee patents, etc. I will quote from that bill "that no more trust or restricted Indian lands, allotted or inherited, shall be offered for sale, nor certificates of competency, a patent in fee, or removal of restrictions be submitted to the Indian Office for approval, except in individual cases of great distress or other emergency where it appears absolutely necessary that a restricted Indian tract of land be offered for sale for relief purposes." Doesn't the Secretary of the Interior think my case comes under this ruling? What more do I have to do to prove my case?

The Indian Bureau is always stating to the public at large that they want the Indian to be self-supporting and develop their natural resources. Well, my natural resources is my timber, and I'm qualified to handle my own affairs. I never bothered the Indian Bureau until my health broke and was forced to go on relief. Then I only asked to sell what is rightly mine. I wasn't begging, but wanted to sell my land and make a home for myself in my ailing years and to invest in a little business that would give me financial security the balance of my life. Is that asking too much of the Secretary of the Interior? Isn't that the American way of life that the Government officials in Washington are always talking about or does that rule only apply to foreigners and not to the American Indian?

I earnestly and respectfully request the Government of the United States to fulfill its duty to me as my guardian and issue a fee in patent to me for my land.

Sincerely,

MARIE J. WILSON.

Address of State Senator Russell Bontrager, of Indiana, Before Indiana Republican Editorial Association

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAPEHART. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by State Senator Russell Bontrager, of Indiana, before a luncheon of the Indiana Republican Editorial Association at Indianapolis, Ind.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, ladies and gentlemen of Indiana's Republican press, I deem it a privilege to be permitted to address a group of people who have long been numbered among those who can be depended upon to fight for the cause of liberty and freedom. Many have been the times

during the last two decades when you, as the representatives of one of America's few remaining completely free institutions, have gone to battle against the encroachment of those things which would destroy the fabric of our American way of life.

You have asked me to tell you about Indiana's historic fight with the fourth branch of our Federal Government—bureaucracy. I welcome the opportunity to do that because I consider the issues at stake to be fundamental, and the outcome of that struggle may well affect every American citizen. I say that because, in my humble opinion, the volley which we fired out here on the banks of the Wabash may well be recorded in history as the opening round in a crucial battle for the preservation of constitutional government.

As a preface to the story, permit me to draw upon a personal experience which was mine some 5 years ago. I will do so solely for the purpose of pointing up some observations which I will want to leave with you.

Five years ago this last spring, I discovered that a considerable area right in the middle of an otherwise lovely lawn surrounding my home had become infested with buckhorn. All of you know what the weed is and what it can do to a lawn. So numerous were the plants that it almost appeared as though the patch in question had resulted from a deliberate sowing of noxious seeds.

Of course I was concerned and immediately set about trying to do something about the situation. I started in the the only way I knew how. Sitting flat on the ground I began, with a long-bladed knife, to dig out that buckhorn, one plant at a time. All summer long I kept the situation under control. As each weed seedling appeared it was promptly destroyed and the plant from which it sprang was dug out of the ground. When fall arrived I felt sure the problem was licked.

You can well imagine my consternation when it was discovered, the following spring, that not only had my efforts to eradicate the original patch failed, but the area infested had actually increased in size.

You see, I had failed to get all of the roots.

During three consecutive summers the process of watchful waiting and digging was repeated. Each succeeding spring it became more and more apparent that no real progress was being made. While the lawn was kept in fairly good condition on the surface the roots kept right on growing and expanding down underneath where they couldn't be reached.

And then someone told me about one of the then comparatively new weed killing preparations. With considerable skepticism, and yet with renewed hope, I began the spray treatment. In its insatiable quest for more substance to feed upon, those little plants drank up every drop of the lethal doses administered. Sucking the stuff into its veins one plant after another carried the poison to the remotest molecule of its deepest root. And then it died.

Today, scarcely a scar remains on that lawn and when a new buckhorn dares to rear its head, one good shot of toxin does the job.

Somewhere along the path of America's history, my friends, someone has been guilty of sowing seeds of cockle. For a long time, now, patches of weed called socialism have been growing in America's fertile fields of liberty. In every patch that has appeared, the grasses of freedom are slowly but surely being choked out.

Last January, a majority of the legislators in your assembly came upon a patch of buckhorn; only it was called by a different name. In fact, the name was rather appealing. It was "public welfare." Even more deceiving than the name was the appearance. On the surface it blended well in color and texture with the surrounding grasses. But the cloak of secrecy which separated the foliage from the roots was so opaque as to

deny Indiana's citizenry an opportunity to see what was going on underneath. Some of us who thought we knew something about the hidden springs upon which the roots were feeding, decided to do something about it.

And so it was that Senator Wesley Malone and I fashioned for ourselves a knife with which to dig down beneath the surface. We wanted to get some of the roots for examination. We felt that maybe some of the pretty foliage that appeared on the surface had been grafted onto the roots of a more sinister plant.

We called our knife Senate bill 86.

As originally introduced, Senate bill 86 did no more than mandate county welfare departments to place quarterly reports into the hands of the county council, the prosecuting attorney, and the county auditor. Each of those officials was already entitled, under the law, to access to welfare records, but only for purposes directly connected with the administration of public welfare. We had information that those officials were, in many instances, being denied access to the records. We felt that county councils should have the information so that they could intelligently process allegations and complaints concerning frauds. And, we felt that the records should be on file in the auditor's office so that all public officials could have access to them.

Let me make it clear that Senate bill 86 was not an "anti-secrecy" bill, insofar as permitting public inspection was concerned.

When the bill was called for second reading, Senator Judson West, a Democrat from Indianapolis, offered an amendment which threw all welfare records open to full public inspection. That amendment was adopted without a single dissenting vote—either Republican or Democrat.

On the day before the bill was scheduled for third reading, the Indianapolis Star published a letter from Oscar Ewing, in which he threatened to withhold Federal funds if we passed the bill.

The following morning the Democratic Members of the Senate had a several hour caucus in the Governor's office, following which they voted against the bill to a man—including Judson West, whose amendment had a few days previously been unanimously accepted. The bill was passed on strictly party lines. As passed, in the Senate, it would have opened all welfare records to full public inspection.

The bill was sent on to the House for legislative processing. Before final passage in the House, the bill was again amended, putting it back into substantially the same form as originally introduced excepting that township trustees were added to the list of officials with whom the reports must be filed. Again the reason for including trustees is obvious. They, as you know, are charged by law with the administration of direct relief apart from the welfare program. We felt that they should have the lists as a means of guarding against duplication of assistance awards.

By the time the bill was passed by the house time was running out. There was danger of losing the bill entirely if it should be referred to a conference committee, so a motion was offered in the senate to concur with the house amendments. The motion prevailed, and the bill was enrolled and sent to the Governor for action.

As you know, the Governor vetoed the bill. In his veto message he stated that he had been informed by competent legal authority that the act violated the Federal statute, and to permit it to become law would result in losing Indiana's Federal funds. Significantly, I think, he failed to identify the "competent legal authority." It is custom-

ary for the Governor to base a veto upon the advice of his attorney general. We have every reason to believe that that was not true in this case.

Well, the Governor's veto was overridden, and senate bill 86 went into the statute books. Since it contained no emergency clause, it did not become effective until the acts were promulgated on July 20, 1951.

In the meantime, Governor Schricker, according to his own statement in his address to the special session of the assembly, given on September 24, directed the State department of public welfare to request a ruling from Oscar Ewing as to whether or not we were in conflict. He has never taken the trouble to explain to any of us just why he took the initiative in bringing about a hearing which ultimately resulted in a temporary loss of Federal funds. Nor has he told us why, after the withdrawal of funds, his appointee, Maurice O. Hunt, State director of public welfare, asked Oscar Ewing whether or not we could spend something in excess of \$1,000,000 of Federal funds already in our possession. That actually happened, and as one would naturally surmise, Ewing said "No." Some of us entertain a sneaking suspicion that maybe Henry had his ears trained toward Ewing while his eyes were focused on a seat in the United States Senate. To be blunt—we think he was playing politics. Events of the special session would seem to confirm that suspicion. Further support is lent to our suspicion by the quotation of Oscar Ewing, carried in the public press, to the effect that he had, at all times, had the cooperation of Gov. Henry F. Schricker and Lieutenant Governor Watkins.

A hearing was held before Oscar Ewing in Washington on May 15, 1951. I will not dwell upon that hearing, but I do suggest that as many of you as can find it convenient to do so, stop by the attorney general's office and spend an hour or two reading the transcript of that hearing. You will get at least a glimpse of how a power-drunk little man with dictatorial ambitions operates.

On July 31, Ewing booted Indiana off the gravy plane of Federal funds for welfare purposes. But he didn't realize that we had a parachute strapped to our back when he kicked us out. He forgot that Congress was still in session, and that we had BILL JENNER and CHARLEY HALLECK on our team. He underestimated the spirit possessed by president pro tempore of the senate, John W. Van Ness, and speaker of the house, W. O. Hughes. He didn't know the stuff of which the Republican members of the legislature were composed.

Equally important, he failed to properly measure the temper of the American people as expressed by the resolution adopted by 46 of the 48 chief executives of the sovereign States of the United States of America, demanding that Congress do something about the secrecy provisions of the Federal law.

On September 24 the legislature was called into special session. Governor Schricker, cooperating with Ewing, served notice that unless we would retreat by September 30, we would irrevocably lose the \$3,600,000 represented by the check which arrived in Indianapolis yesterday.

Lieutenant Governor Watkins and every soul in the Democrat delegations in both the House and the Senate likewise were still cooperating. Five times the Senate voted on the so-called escalator bill which will insure Indiana's needy against further arbitrary action by Oscar Ewing. Five times the Democrats voted solidly against it. And, finally, when the Senate was asked to concur with House amendments to a Senate bill which gave an insurance policy against reprisals from Washington, Lieutenant Governor Watkins, in one of the brazen pieces of "roller skating" ever witnessed in legislative halls, attempted to scuttle the whole program by completely reversing a previous

ruling, made by himself, and sustained a point of order addressed to the House amendments. On appeal from his decision, we overruled him, and on a roll-call vote on the motion to concur, every Democrat in attendance in the Senate once more voted "No."

And so the bitter struggle ended at 4:10 p. m. yesterday when the House adjourned sine die. The so-called "escalator-formula clause" bill now reposes in the Governor's office. It remains to be seen whether or not the Democrat legislators' desperate efforts to scuttle will finally prevail through the medium of a veto. Not later than next Wednesday p. m. we will know just how well Henry is cooperating with Oscar Ewing now.

The special session closed, we legislators will return to our homes to try to gather up the pieces of our several businesses and professions. You gentlemen of the press will have other subjects to headline. But, I trust, none of us will kid ourselves into believing that the fight against encroachment of bureaucracy upon liberty and freedom has been won. Make no mistake about it, we have done little more than clip a few seed pods. The roots are still intact.

We still have Oscar Ewing at the steering wheel of a vehicle powered by an ideology completely foreign to the American way of life as envisioned by the architects of our citadel of liberty. That ideology is summed up in one sentence taken from this booklet, which was printed by the United States Government Printing Office at the expense of America's taxpayers, a book which has been distributed by the Federal Security Agency as an interpretation for staff in public-assistance agencies: a book which has been a bible of instruction for welfare workers all over America. "Social security and public assistance programs are a basic essential for attainment of the socialized state envisaged in democratic ideology, a way of life which so far has been realized only in slight measure."

No, my friends; you can't destroy that philosophy by opening relief rolls. You can't destroy it by digging out a few chiselers who have exploited the welfare program. And while I am not advocating an abandonment of public assistance, I am saying to you, that unless we do destroy the philosophy upon which the public-welfare program as presently constituted is built, it will carry down the drain the American way of life as we have known it.

Our experience here in Indiana has made us aware of the fact that we have come precariously close to the point where every man must come, hat in hand, seeking an alms from that government to the support of which we have given our all.

As a result of the action of Oscar Ewing we know that the price which we have paid for the "fools gold" which Washington has been pawning off onto us under the noble banner of security is bondage.

We know that in our blind mad quest for security, we have, little by little, been sacrificing our liberty.

We know that it is about time that somebody starts loading the spray-gun for action. That gun is going to have to be loaded with a lethal dose, the effects of which, when sprayed upon the cockle growing in American fields, will be carried to the farthestmost roots of the insidious plant that is slowly but surely crowding out our grasses of liberty and freedom.

We know the ingredients for making the dose. If we will but mix a little freedom of opportunity with freedom from bureaucratic control; throw in a handful or two of good old-fashioned incentive, add a shot of courage fortified with the moral and spiritual values possessed by our forefathers; stir with a liberal supply of faith in the American system as the one which truly offers the last

best hope of earth, and then temper the whole brew with the principles of constitutional government, we will come up with a prescription that will do the job.

You gentlemen of the press have the spray gun in your hands. It is the free press of America. What you will do with it is up to you. The best gun in the world, loaded with the most lethal spray obtainable, will be totally ineffectual if some one doesn't pump the handle.

Those of us who have been picking seed pods are willing to continue doing so. We will help you mix the ingredients for use as a spray. We only ask that you man the handles.

The Meat Industry

EXTENSION OF REMARKS OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, I ask unanimous consent that a column which appeared in the Washington Times-Herald on October 17, 1951, on the subject of the meat industry, be printed in the Appendix to the RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows.

MEAT INDUSTRY DEFENSE WINS SENATOR PRAISE—SCHOEPPEL CHALLENGES MORGAN CHARGES

Senator SCHOEPPEL, Republican of Kansas, is being showered with praise for his speech last week challenging Edward P. Morgan to put up or shut up in the latter's attack against the cattle industry.

Morgan, enforcement director of the Office of Price Stabilization, charged last week that the meat industry is sabotaging the entire price-control program.

SPEECH CIRCULATED

SCHOEPPEL's speech was given wide circulation by radio commentator Fulton Lewis, Jr.

As a result, SCHOEPPEL is receiving the congratulations of his fellow Senators, mid-western cattlemen who resent what they regard as Morgan's effort to defame them, and individual voters in his home State.

CALLED IRRESPONSIBLE

SCHOEPPEL called Morgan's claim that 38 percent of the Nation's slaughterers are violating meat controls an irresponsible accusation.

"In what I consider to be a high-handed fashion," SCHOEPPEL told the Senate, "this same Mr. Morgan has threatened to jail American businessmen who do not comply with the directives of his agency."

"If Mr. Morgan knows of any violation of the law, as an enforcement official, I am sure all of us would like to see him immediately proceed to prove those violations in a court of law and punish the violators. Let him refrain from indulging in these attacks."

WORKED WITH TYDINGS

SCHOEPPEL recalled that Morgan had been general counsel of the Tydings committee which was charged with investigating the infiltration of Communists into the State Department.

The Tydings investigation was labeled a "whitewash" by prominent Republican Senators.

SCHOEPPEL declared that Morgan was not as belligerent or militant in investigating subversives as he is in accusing American businessmen "of threatening to destroy the price-control program."

The Kansas Senator declared that Morgan allowed former Communist Party leader Earl Browder to live up to Browder's boast that he was using the Tydings committee as a "transmission belt for Communist propaganda."

BROWDER COOPERATIVE

SCHOEPPEL added that many persons believed Morgan did not lay a proper legal foundation for the contempt citations against known Communists. These citations were later dismissed by the courts, which found, SCHOEPPEL said, "that Mr. Browder was most cooperative with Morgan."

"Did this now bellicose individual, who is threatening American businessmen, threaten the Communists when they were before him? No, the record is clear," SCHOEPPEL told the Senate.

"My memory extends back to the Pearl Harbor affair," SCHOEPPEL continued. "Many called it a whitewash investigation, too. Who participated as counsel in those hearings?"

"Was it not Edward P. Morgan?"

DOUBTS THOROUGHNESS

"Did he dig in and present all the facts? There have been grave doubts expressed as to that."

"I for one am glad that the American Meat Institute, Inc., is not as cooperative with Mr. Morgan as was Earl Browder," SCHOEPPEL declared. "Let Mr. Morgan talk less and bring these cases into the open, into the courts. Let him cease to charge unidentified groups of American citizens."

"Let him refrain from accusing the great cattle and packing industry of the United States. Let Mr. Morgan put it on the line as to violations, or admit that he is just talking."

BLAMED ON OPS

SCHOEPPEL put into the RECORD a statement from the Meat Institute in Chicago, which replied that "time, and not loose talk and mischievous allegations will prove that everything wrong with meat is the result of OPS's own price-control regulations, which threaten complete destruction of the consumer's meat supply in legal trade channels."

The National Independent Meat Packers Association also declared restrictive price controls are keeping meat off the market. The packers association declared "there is a reasonably adequate supply of meat and the people ought to be getting it."

Opportunities Open in Foreign Service for Negroes Under Democratic Administration

EXTENSION OF REMARKS OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KLEIN. Mr. Speaker, some wit described the Democratic Party as a state of mind because of its heterogeneity and its lack of dogmatic approach to public issues.

That is a gentle impeachment, more praise than blame. Because the Democratic Party is free of dogma and of

domination by vested interests, it is able to make its actions speak louder than words from the Republicans. On racial questions, the Democratic Party is probably burdened with some of the most fanatic fanatics known to man.

The difference is that the huge civilized and progressive wing of the Democratic Party actually progresses in all branches of government despite the heavy burden. For decades the Republicans have been trying to live on Lincoln's greatness in human relations; but the myth is worn out.

Everywhere in America today there is less discrimination toward all minorities and less prejudice, too, because of the progressive Democratic administration.

A most shining example is the Department of State, which, under Republican administrations, established a tradition of not allowing an American Negro to rise above the grade of messenger except in relations with Liberia. Today discrimination has virtually disappeared in the Department of State, even in the Foreign Service.

It gives me pleasure to insert in the RECORD, under leave, the following news story by Miss Alice A. Dunnigan which appeared in the Washington Afro-American of August 14, 1951, testifying to the new opportunities:

FORTY SERVE IN DIPLOMATIC SERVICE IN FOREIGN FIELD

(By Alice A. Dunnigan)

WASHINGTON.—More colored Americans are serving the United States Government in diplomatic establishments, embassies, legations, and consulates abroad than ever before. Some 40 persons are stationed in a score of foreign countries, serving in various capacities. These range from an ambassador at \$15,000 a year and prerequisites down to stenographers and guards with salaries of about \$3,000.

For many years colored persons were confined to two or three foreign areas. Liberia has had a colored staff for years. There have been consuls and clerks at Lisbon, Portugal, Azores Islands, and Canary Islands. But Secretary of State Dean Acheson, with the approval of President Truman and the cooperation of half a dozen career men in the State Department, has pushed a change in assignments.

The State Department is more sensitive to the reaction of other countries to America's preaching of democracy than are other governmental agencies or business.

The representatives have had to bear the brunt of answering questions from foreigners, often black, brown, or yellow, about the status of colored people in democratic America.

GROUP BEHIND INTEGRATION

For a number of years a small group in the State Department has been urging the integration of colored persons into various embassy and legation staffs. They have sought to break up the solid colored staff in Liberia. Among those who have been working toward that end were:

George C. McGhee, Assistant Secretary of State; Harold Sims, area officer, African Division; Andrew Lynch, now in Tripoli; Henry S. Villard; Garland Farmer, chief, African desk; Clare Timberlake, consul-general, Bombay; and Dr. Ruth C. Sloan, United States Information Service. The Korean war and current manpower shortage also have helped open up opportunities.

It is not easy to discover all of the colored persons in State Department service. Apparently no record is kept by race. Through contacting personnel officers and looking back over past records, it is possible to list most of the group. They are:

THOSE ON RECORD

Rudolph Aggrey is in Lagos, Nigeria. His father, a famous African educator, was one of the founders of Achimota College. John P. Baynard, of Pennsylvania, is in Liberia. J. T. Beaver, Jr., from Dayton, Ohio, is in Tenerife, Canary Islands. David B. Bolen, Heflina, La., is in Monrovia.

William P. Boswell, of New Jersey. Lena Bridges, of New York, and Lillie M. Hubbard, of Chicago, are at the consulate in Ponta Delgada, Azores Islands. Solomon H. Bostic is in the embassy at Athens, Greece. Beatrice M. Carson, of Louisville, is a stenographer in Paris. Florida E. Denham is on the staff at Frankfurt, Germany.

Charles Davis, of New York, is in Cairo, Egypt. Edward R. Dudley, Ambassador to Liberia, occupies the top rung in diplomatic assignments. Lamar E. Forte, Kissimmee, Fla., is an agriculturist in Liberia; Rita Garth, of New York, is stationed in Monrovia, as is John S. George, a native of Washington, D. C. His wife, Ida, is an attaché of the Liberia consul.

TRANSFERRED TO DENMARK

William C. George recently was transferred to Copenhagen, Denmark. Willis Holloway, of Phoebus, Va., is in Monrovia as is Thomas Hopkins. Charles Hanson, Jr., of New York City, last year became vice consul in Zurich, Switzerland. Giles A. Hubert, formerly of FSA and is now en route to Bombay, India, to be vice consul.

Rupert A. Lloyd, of the District of Columbia, has been second secretary and vice consul at the American embassy in Paris for 3 years. Carl T. Mebane, of Connecticut, is in the Embassy in London. Ruth Phillips, of Harrisburg, Pa., is in Monrovia. Frank E. Pinder, of Key West, Fla., of the agricultural mission in Liberia has returned to the United States on leave.

ONE IN INDONESIA

Eugene D. Sawyer, of Kansas City and Washington, has been serving as information officer for USIS in Liberia and now goes to New Delhi, India. Mack M. Speights, Jr., is in Manila, Philippine Islands. Herbert C. Tate, former attorney in New Jersey, has gone to Karachi, Pakistan. Myrtle E. Thorne is in Medan, Indonesia, while James Todd is at Cairo.

Orville Lewis, of Manassas, Va., Harold Ward and Albert Witcher are in Liberia; and Lawrence B. Wilson, of Los Angeles, is in New Delhi, India. Dean of the service is Clifford R. Wharton who serves as consul general in Lisbon, Portugal.

Forests and Men

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, Col. William B. Greeley is one of Washington State's most distinguished citizens. He has devoted a lifetime of energy and intelligence to the development of the Pacific Northwest and to the management and preservation of its forests. Colonel Greeley has written *Forests and Men*,

which, in my view, is the best book written in our time on the struggle between man and forests, and the forces of competitive enterprise versus the social planners who dictate how each taxpaying tree in the United States be cut by mimeographed instructions from Washington, D. C., our Nation's Capital.

Mr. William D. Hagenstein, a personal friend and timber authority, has written a splendid review of Colonel Greeley's book. This review may well arouse a full measure of interest in thousands who have never visited the Pacific Northwest. It will certainly find favor with those who know anything about trees. I ask unanimous consent that Mr. Hagenstein's review be printed in the Appendix to the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

FORESTS AND MEN BY WILLIAM B. GREELEY; 255 PAGES, DOUBLEDAY & Co., INC., NEW YORK, 1951

(By W. D. Hagenstein)

No man in the United States is more qualified to write the factual story of lumbering and forestry in America than Col. W. B. Greeley. After 50 years—half as a public forester, half as an industrial tree grower—Colonel Greeley has set down a chronicle which will hold the interest of every lumberman and forester.

He dedicates his book, *Forests and Men*, "to the men of the woods—the cruisers, loggers, rangers, and foresters," whom he knows so well.

Forestry has always seemed to advance following some great tragedy—a catastrophic fire, a disastrous insect epidemic, or a destructive war. Colonel Greeley begins his narrative with a stirring account of the desolating 1910 fires of Idaho and Montana. It was here where Forester Greeley first made his mark as a forestry leader. His conviction then as it is now was that the No. 1 job of American forestry was preventing smoke in the woods.

His saga of free land and timber tells the story of free land and cheap timber which over a century helped develop the United States as the best fed, best housed, most satisfied Nation on earth. He chronicles the abuses and misuses of land and trees, a big part of which occurred before general public awareness of or interest in converting the timber mine to the timber crop.

His chapter entitled "The Great Crusade" with intimate behind-the-scenes flashes of the Theodore Roosevelt-Gifford Pinchot era is a fascinating tale of determined men carrying the torch for ideals they fiercely believed. No pioneers in the history of the United States worked so hard as that handful of young foresters gathered around Pinchot to do so much for the wise use of the Nation's resources. The watchword of their crusade was timber famine and their dire predictions of the South, the Lake States and, indeed, the Nation, of running out of trees long before Colonel Greeley's book was written were used dramatically to make any lumberman who gambled his capital and skill in supplying a growing Nation with its lumber needs the arch enemy of conservation. No single crusade in history so changed American public opinion and American politics as did the cry of timber famine.

It took the young forestry profession a long time to change the color of the lens in its ideological bifocals so that it could clearly see the problems of converting a seemingly limitless virgin forest resource to the growing trees of a stable economy.

Hewing to his lifelong philosophy of first things first, it is no wonder that Greeley

teamed up with the western forestry genius, E. T. Allen, in working out practical cooperative forest fire protection which became the Clarke-McNary Act. Tree growing, without adequate protection, was a hazardous business at best, and Greeley as Chief of the Forest Service in the 1920's helped make the Clarke-McNary Act work with his watchwords of "cooperation and education."

After his monumental job as Chief of the Forest Service, it's no wonder that the west coast lumber industry turned over its helm to Greeley in 1928 to steer them out of the "dismal swamp" of chronic overproduction, cheap timber, inadequate forest protection, and adverse freight rates. During his tenure as secretary-manager of the West Coast Lumbermen's Association the end of cheap timber arrived and the longest sellers' market in the 300-year-old history of the American lumber industry has held away. Greeley's account of the impact of this market on forestry throughout the Nation is a story without precedent in the annals of American business.

Colonel Greeley, practical forester, has stood head and shoulders above most men of his profession in being a principal advocate for full crop utilization because of his realization that full use of what the forest is capable of growing is what pays the timber-growing bill.

Colonel Greeley's analysis of the ideological struggle between those who would grow timber by Federal fiat, as opposed to those who would grow it under the profit motive incentives of free enterprise is as clear-cut a picture as has ever been set in type in our day. Greeley maintains that "teachers" rather than "policemen" will bring forestry about in the American woods faster, more efficiently, and democratically.

Greeley's clear thinking and speaking has always been one of the glories of the forestry profession and the lumber industry. In one concluding paragraph, he neatly sums of his absorbing story.

"The forest story is very largely the story of America. The zest for free land and the almighty dollar, the creation of new skills and industries, the craze for bigger and better sawmills—all are part of our people and temperament. The commercial genius of the country was never displayed more dramatically than in the industrialization of the depleted pineries of the South or the teaming up of wood technology and forest management since the outbreak of World War II. And just as true to the American heritage are the challenge and idealism of conservation. From our own experience and leadership we have created an enduring philosophy of restraint and forethought in the use of natural resources."

Address by Telford Taylor, Administrator of the Small Defense Plants Administration

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. SPARKMAN. Mr. President, Mr. Telford Taylor, Administrator of the newly created Small Defense Plants Administration, made an excellent talk in Boston before the Smaller Business Association of New England. I ask unanimous consent that this address be printed in the Record.

There being no objection, the address was ordered to be printed in the *RECORD*, as follows:

The most important part of my meeting with your association has already taken place. As you know I took the oath of office as Administrator of the Small Defense Plants Administration only a few days ago. The agency is a new-born infant, and its organization and program are in a very early stage of development.

If, therefore, the only purpose of my visit to Boston had been to make a speech, it would have been time ill-spent. And that is why I said that my major purpose in coming here has already been fulfilled. That purpose was to seize this early and welcome opportunity to sit down, informally, with the officers and members of your association, and hear from them, at first hand and with plenty of time for discussion, their statement of the problems that face small business today, and their suggestions for a practical and effective program of action. I didn't come to Boston to give a lecture. I came to listen and learn. I have been listening all day, and I think I have learned a lot.

As soon as some of the basic organizational problems of the new agency have been dealt with, I hope to make similar trips to other parts of the country. But I am especially pleased that I have had this chance at the very outset and before any of the inevitable mistakes have been made, to come to Boston. My parents were both born and raised here, and my grandfathers were both Boston businessmen—small-business men. So my family roots are here and my upbringing and education has been in the New England tradition.

But this occasion is fitting for other than personal reasons. Historically, New England is the cradle of our industrial and commercial life. It was here that the pattern was set. No other region of our country offers as rich and varied an example of small-business activity as New England. Of its business enterprises, 85 percent employ less than 100 workers and 94 percent less than 500. New England business is almost synonymous with small business.

New England, therefore, typifies the small-business tradition and contribution. But, of course, this is a Nation-wide problem. I happen to be an up-State New Yorker by birth and rearing, and a New York City lawyer by profession. New York City is stereotyped as the citadel of big business and bankers. But it is also a great center of small business. And it goes without saying that, throughout the rest of the country—North, West, and South—small business is a vital organ of our national economy.

There is no mystery, therefore, about the basis for the Federal Government's concern for the continued health and welfare of small business. For many years the Department of Commerce has laid great emphasis on the needs of small business, and has served them well. The Emergency Defense Agencies have established small business sections or offices to assist small business. What, then, is the reason for a new and independent agency?

I think the reasons Congress had in mind in enacting the law which established the SDPA are quite clear from the House and Senate hearings and reports. Despite the best efforts and good will of all concerned, procurement under the current partial mobilization program has shown a definite trend toward concentration in the very largest manufacturing corporations. I do not want to bore you with a lot of figures, or to pretend that I have a lot of figures at my command so soon after taking office. But, according to the latest figures released by the Munitions Board, the dollar volume of defense contracts awarded to small companies has declined from 24.5 percent in the fiscal year 1950 to 21 percent in the fiscal year

1951—a decline of nearly 15 percent. The proportion of prime defense contracts allocated to the largest corporations—whether you take the largest 10, or 20, or 50—is far higher than it was during the recent war.

Hand in hand with this trend toward concentration of procurement, we are now facing increasing shortages of materials. Only 10 days ago NPA Administrator Manly Fleischmann said that so far as the first and second quarters of next year are concerned, the outlook is, to use his word, "dismal." He went further, and told a group of Senators and Congressmen, members of the Small Business Committees and Banking and Currency Committees of both Houses, that: "The cuts that we have made will mean that there will be localized unemployment, loss of profits to many manufacturers of nonessential civilian goods, and the actual closing down of plants which cannot operate on the limited supplies of aluminum, copper, and steel which will be made available to them. We have hoped to hold such unhappy developments to a minimum, but there is no dodging the fact that many will be hurt."

Now, no new agency is going to be able to end the international tensions which give rise to these difficulties and dislocations. Nor is it going to be able to transmute wish into fact and discover large quantities of steel, copper, or aluminum when our actual supplies are in fact stretched to the limit. But I think Congress felt, and rightly, that the problems which are now swarming around the head of the small-business man, like so many bees, call for a creation of an agency whose sole and exclusive function will be to grapple with these problems and to be the spokesman of and claimant for small business. That is the way I envisage this job, and I know that is the way Congress envisioned it. The support for this agency was impressively broad and completely nonpartisan in both Houses of Congress. More than 50 Senators—Democrats, Republicans, easterners, westerners, and southerners—sponsored the legislation in the Senate. In the House, where the Small Business Committee and the Banking and Currency Committee have been so alert to small-business interests, the unanimity was equally impressive. And of the basis of this unanimity was, I am sure, the desire to have a focus of responsibility in an agency with no duties whatsoever other than to speak and claim for small business. As one of the Senators who has been most active in this field told me, "I am tired of beating on a score of administrative heads. I want one head to beat on." And then he made a significant gesture.

Now this is all very well, but the question remains, what is inside the head that the Senator proposes to beat upon? I did not pretend to the Congress, and I will not pretend here, that I have broad or long-continued experience with business, large or small. During most of the past 10 years I have been overseas. Nevertheless, both in my law practice and my earlier government experience, I have repeatedly been brought into contact with small-business problems and, I think, have developed at least an approach and a sympathy. In my law practice I have represented small businesses in the fields of electronics and communications and prepared food. Until I took this Federal office, I was a director of a small developmental electronics company in New York City. Before the war, when I served as general counsel of the Federal Communications Commission, I became deeply involved in small-business problems in the radio field. Much of what the Commission did at that time was for the purpose of preserving the health and independence of the small radio stations. So I can assure you that I am approaching this task with enthusiasm and a firm belief in its importance. And I hope to compensate for my lack of expertness with the help of associates and colleagues who

are better qualified in that respect, and by frequent consultation with associations such as yours.

I am not going to take your time with a clause by clause description of the SDPA legislative provisions and authority. I imagine that most of you are pretty familiar with the law already. Obviously, our task during the next few weeks will be to assemble the nucleus of an organization geared to serve small-business men. I am determined, as I know Congress is, that businessmen shall not have to run to Washington with all their problems. We want to be on the spot to help, and I have had many valuable suggestions from your association with respect to decentralization and regional representation.

It will be my purpose to assemble a lean, rather than a fat, organization. Manpower and talent are at a premium today just as much as steel and copper. The success of this new agency is not going to be gauged by its size or how much noise it makes. I hope that the agency will come to be respected for its economy of operation as well as for its sincerity of purpose to accomplish the ends for which Congress designed it.

The temper of the SDPA, therefore, will be determined but not combative. It will be a combination of a lubricant and a stimulant. This is not going to be any holy war between big business and small business. There is no reason for conflict, there is every reason for cooperation. Big business and small business are dependent upon each other for mutual health and, indeed, survival. The concept of a supple, flexible, and competitive economic structure is deeply imbedded in our law, and is a vital element of our political tradition, irrespective of partisan considerations. Monopoly means death to free enterprise, and inevitably leads to the internal decay of the monopoly itself.

These things I feel very deeply, and I have had abundant opportunity to observe the unhappy results which ensue under a monolithic, totalitarian, economy. Germany under Hitler went through a period of economic mobilization just before the war which the Nazis called the 4-year plan. Nearly 75 percent of the procurement under the 4-year plan fell to a single gigantic combine—the I G Farben Chemicals Group. The Farben chemists produced wonderful formulae, and learned how to turn German coal into gasoline and rubber and explosives which Germany so desperately lacked and needed. But Germany paid a terrible price for this concentration of industrial power, in economic as well as political and human terms. We cannot afford to go down this road and, if we do, we shall end in defeat, through our own short-sightedness, at the hands of the very forces against which our defense efforts are directed.

Least of all is it the purpose of the new SDPA to obstruct or delay the defense program. On the contrary, its purpose is to support and strengthen defense production by expanding its resources and giving wider scope and fuller opportunity for the contribution of ideas and products that small business can make. By this very process, we can also insure that the strains and stresses of defense production do not work a fundamental dislocation of our economic structure, and throw it out of balance in a way that would soon be harmful to the defense program itself, and ultimately fatal to the national welfare.

The purposes of the Small Defense Plants Administration are, therefore, not only in line with but an integral part of our political and economical tradition. They are highly conservative, in the best and most precise meaning of that much abused word.

I know, therefore, that New England businessmen, large and small, will welcome the new agency and support its purposes. It is here in New England that the free-enter-

prise tradition struck root and has found its most eloquent expression. I want to thank all of you for the invaluable support which you have already given the agency, no less than for the courtesy and hospitality with which I have been received. I am returning to Washington taking great comfort in the realization that we have formed a partnership—a conservative partnership—which will go far to insure the success of this undertaking.

The Fundamental Issue in the Crisis

EXTENSION OF REMARKS

OF

HON. HARRY P. CAIN

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. CAIN. Mr. President, not long ago I was privileged to address the Western Republican Conference which met in Seattle, Wash. This conference brought together Republican leaders and workers from the 11 Western States. I spoke to them of the fundamental issue which is of the greatest importance and significance to millions of American citizens. In order that citizens elsewhere may be given an opportunity to agree or argue with my point of view, I ask unanimous consent that the address to which I have made reference be printed in the Appendix to the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

THE FUNDAMENTAL ISSUE IN THE CRISIS

(Address of United States Senator HARRY P. CAIN before the Western Republican Conference, Seattle, Wash., October 15, 1951)

I

This meeting of Republican leaders from the 11 far Western States has been called to consider the problems of the coming campaign.

The duty assigned to me for the day is to discuss briefly the fundamental issues.

I certainly welcome the opportunity.

My text is based on two recent quotations.

1 On September 20, the President said that Democratic victory was certain because the Republicans had no issues.

2 One day later a discouraged constituent said to me: "The farm leaders have sold out to the administration. The labor leaders have sold out to the administration. The business leaders have sold out to the administration. Is there anybody left who cares anything about the people?"

I recommend to the Republicans that they start thinking about the people.

You will recall that on September 4 the President addressed a meeting of Democratic Party workers in San Francisco. He was exultant in his prophecies about 1952. He was exultant in his claims that the administration had brought about peace and abounding prosperity. He was exultant when he said that voters knew it and would sustain the Democratic Party at the polls next year.

He spoke of prosperity but didn't say anything about the savage taxes that will hit our people with redoubled force next year.

He spoke of peace, but didn't say anything about the strange meat grinder war in Korea where American soldiers are forbidden to press to victory and instead ebb their blood away in a planned stalemate.

He spoke of prosperity and said never a word about the fact that where in 1940 you

could get a box of shredded wheat for 8 cents it costs 19 cents now. He didn't say anything about the fact that while in 1940 a pound of Maxwell House coffee cost 25 cents you have to pay 93 cents a pound today.

He spoke of peace and the achievements of the New Deal and the Fair Deal in promoting world concord, and said never a word about Yalta where Russia was all but handed the world on a platter.

He spoke of prosperity and said never a word about milk coats, RFC shake-downs, and the corruption, the bribery, and the grafting uncovered every day in the Internal Revenue Bureau.

Yes, we have peace—a brooding, dreadful, blood-soaked peace that threatens to explode at any moment.

Yes, we have prosperity—a gangster prosperity of criminal alliances and 50-cent dollars.

The President says the Republicans have no issue.

I say the Republicans have many issues, but they have one issue above all. The future of the American people.

You know as well as I the depth of the anxiety that pervades this country.

The question is: What are the Republicans going to do about it?

Do you remember what happened at 12 o'clock noon, eastern standard time, on April 19, 1951?

An old soldier, through with many of the tasks of life, stripped of his command and discharged in disgrace by the President, addressed the United States Congress.

And throughout this country there occurred an extraordinary phenomenon.

From coast to coast work stopped.

In homes and in offices, in saloons, in front of garages, in movie houses, in schools, in the open air, wherever there was a television or a radio, crowds listened breathless to the old man. The emotional tension was often beyond bearing. Some Members of Congress wept and I saw them weeping unashamed.

And Congressmen were not the only ones in tears. It was common everywhere.

What do you suppose was the explanation of this outburst?

Was it because all these millions of people had day by day followed with meticulous care what this elderly veteran had done over the years?

Of course it wasn't.

Then what was the explanation?

It was this:

A harassed, badgered, and anxious people, baffled beyond endurance by the actions of their Government and fearful that in some dreadful way their country and their future were being betrayed, felt that someone who could be trusted was telling them what they had to do.

Like a lightning flash, the country's true state of mind was revealed.

An old soldier, in the sunset of his life, was making his last official farewell. He had done his duty and was through. And as he said good-by, he pointed out to his fellow countrymen in tones confident, serene, and unafraid, the truths which everyone knew in their hearts were true.

It was, in effect, a call to the younger men and women to shoulder the responsibilities which they had neglected, to take the risks which must be taken.

Then the echoes of the old man's voice died away and our people were left once more with the dreadful question of their country and its future.

Do you ask me if the Republicans have an issue?

They do indeed.

II

In November 1948, 22,000,000 voters declared for Dewey as against 24,000,000 who voted for Truman. That is an enormous vote and shows that Republican ranks still

hold and that the core of Republican strength is still sound.

But the situation before us demands a sense of blunt realism. Republicans must grasp the really crucial character of the coming election.

In this election, I believe, the great single issue of our time will be finally resolved.

The issue is this: Shall the people control their Government or shall their Government control them?

For 22 years, since the crash of 1929, this issue has been swaying in the balance. The decision cannot be postponed much longer.

I believe that the Republicans can win this struggle but they can do it only if they search their minds and hearts, rid themselves of cant, accept the issue on its merits, and fight.

It is absolutely essential that our young people understand what the issue is.

In large part this issue is going to be decided by the young men and women under 35, going straight down the line to those just out of high school and headed for the armed services.

What's the prospect ahead of a boy of 18 or 20 today?

The law now says he must put in 2 years of military service.

That's all right, but something tells this boy that it may be far more than 2 years.

He feels, somehow, he knows that if the Korean slaughterhouse is an illustration—our Government either has no policy or it has put one it does not dare to reveal openly.

In any case he feels, he knows that he will be callously flung into the meat grinder and that nobody at home—save his family—will care what happens to him.

And that boy is right, I must say that it's a pretty dreary day in the history of this Republic when we have to admit that the boy is right.

You have got to be able to look these young people in the eye and say:

"We are going to put this mess at home to rights. If it turns out that you have to fight for your country, we propose to fix it so that you know what you are fighting for, that your future is a matter of anxious concern of those at home and that you are not at the mercy of an irresponsible gang of grafters, fellow travelers and dead beats."

That is not all you have got to say.

You must say—and mean it—to these young people: "We propose to see to it, no matter what the cost, that you get a real chance in life, a chance to do something for your own future."

The Republican Party must stand or fall as the champion of individual effort and of private enterprise—be it farm, factory, profession, or trade.

I wish we had a new, a better phrase.

The expression "private enterprise" has become so frayed and dingy from misuse that it frequently raises a hoot of derision.

Nevertheless, for the moment, let the phrase stand. Concealed within it is a core of living fire, the natural impulse of every human being to reach for something better.

Whatever its mistakes or blunders may have been in the past, the Republican Party has scored its greatest triumphs and successes as the defender of the individual in economic effort.

It was the party for the young who wanted, as the saying goes, to get ahead.

History may record many instances when the Republican Party was faithless to its own principles. All of us can recall follies and stupidities of which Republicans have been guilty. But everyone knows also that the heart of Republican doctrine was the belief that any man or woman who wanted to get ahead should be welcomed, aided, and defended in the effort.

Republicans were willing to give away farms under the Homestead Act but a man

had to—as they said—"prove up" for himself.

It was this doctrine of opportunity, of aid and protection to effort that gave the party its unbelievable driving power and carried it from one victory to another.

The idea of getting ahead, of "proving up," linked up, reasonably enough, in the ideas of freedom of action, of opinion, of initiative and self-reliance.

Under this dispensation there grew up the most substantial middle class ever known, proud of its position, jealous of its rights, and tenacious of its privileges.

The restless and energetic of every country clamored to get in as immigrants and share the opportunity.

Then, in 1929, the United States and the entire world were shaken by the greatest financial crash in history.

The Republicans were caught by surprise, without a weapon in their hands, without a policy.

Nature abhors a vacuum.

In 1932 the Democrats swept the country. They have held executive power ever since.

III

Whatever the merits of some individual pieces of legislation may be, 20 years of Democratic power has completely changed the character of Government. Here are 10 of the most common outward evidences.

1. An enormous increase in taxation, with more increases in sight.

2. A similarly enormous increase in Federal spending, not only at home but in every quarter of the globe. Every day a Niagara of money is scattered by Washington to the ends of the earth.

3. A steady fall in the value of the dollar.

4. A tremendous expansion in the number of Government jobholders.

5. A tremendous growth in the power of the Executive.

6. An even greater growth in the power of the bureaucracy.

7. An increasing tendency toward secrecy and concealment in Executive action toward Congress, the people, and foreign governments, along with a determined effort to withhold information.

8. A weakening of the will and courage of Congress to resist dictatorial action.

9. A withering away of the power and influence of individual communities, cities, and States with increasing dependence upon Washington.

10. A sinister growth in influence of two groups: The Communists and their sympathizers and the criminal element. This common infiltration into Government of the Communist and the gangster is one of the most astonishing and terrifying developments of our time.

Today the crude and uneven outlines of the omnipotent social-service state are more or less revealed.

This welfare state is not yet consolidated; its power is not yet completely riveted, and it is this fact that offends the Republicans their great—and, as I think, their best chance.

I truly believe that unless Republicans seize this great chance, act decisively and press to victory, then the next 4 years will see the last of representative Government, the last of individual rights, and the last of freedom.

I ask you to look a little more closely at this picture.

Remember how in that great vacuum of 1932 the first tremendous grants of money and power were made.

Unemployment was a fact. The depression was world wide. Some sort of action was plainly necessary.

Then remember how, in the wake of the relief which, in some form, was inescapable, the great changes began to steal upon us. They did not come of themselves.

They were proposed and pushed by those who had been waiting for years for an opportunity.

Upon the surface they appeared to many people beneficent measures.

They guaranteed something to almost everybody.

They would guarantee an income to some, a wage to others; they would guarantee medical care, shelter, school—almost anything.

Of course, these things had to be paid for and this was done in two ways: reducing the value of money and driving the taxes even deeper.

More slowly it became clearer than these benevolences carried with them control, authority and autocratic decision.

I suppose the proposed Brannan plan is as simple an illustration as any: The Brannan plan would guarantee every farmer an income provided he agreed to let the Government tell him what he may grow and exactly how much. He must agree to let the Government tell him what he shall or shall not do in the management of his farm. In exchange for the income he sells himself into serfdom and shackles himself for good and all. The money to pay for this will come from taxes paid by you, whoever you are, wherever you live, whatever your occupation.

And now look at the subtle changes that begin to come over our people.

Little by little the vitality, the robust enthusiasm, the marvelous willingness to take the chances that made our country great, all these characteristics begin to numb and ebb away.

Simultaneously an indescribable change comes over Washington. I have seen it and it is horrible. It has become the gathering place of the timid and the greedy, the shy and the subversive. It is too often the exception in Washington who has retained a sense of manhood, decency, and self-respect, a willingness to stand up and fight for the real interests of our people.

You will search in vain the legislation I have described for any sign of interest in releasing the energies of our people or of recognizing the worth of individual effort.

The thing that the Fair Deal hates above all others is the man or woman who makes up his own mind and is determined to act upon his own decisions.

An interesting incident happened while the Hoover Commission was at work. One commission task force investigated the Federal personnel, their quality, their standards of performance, and their reputation. The task force was curious to know what the attitude of college students toward Government employment was and in an effort to find out circulated several thousand.

It took a load off my mind when I saw the results. The majority did not want to work for Government. They still felt the urge and the ambition to go it alone.

It is to that majority we must appeal. They are our last and best hope, and our appeal must be on the level.

We must have the young people on our side, and they will be on our side only if we guarantee, come what may, that the channels of individual effort are kept open.

The intention of the Fair Deal is to work its betrayal by offering our people protection from the cradle to the grave.

Our course is plain and clear: We have got to offer opportunity from the cradle to the grave and see to it that we deliver on our promises—no matter what the cost and effort to us; no matter what the blood, sweat, and tears.

Every businessman, every stenographer, every union organizer, every housewife, every farmer, every soldier, every school teacher, every physician, every man, woman, boy, and girl should burn into his mind and heart this truth:

If you throw yourself upon the mercy of Government in Washington, mercy and hand-outs for toeing the line are all that you can expect. You will wake up to find your freedom gone, you will find yourself at the mercy, mercy is the word, of arbitrary action taken far away.

IV

All over the world we have seen representative government go down under dictatorship. The dismembered British Empire shrinks slowly back to the little island taken over by William the Conqueror 900 years ago. The darkness of the Communist night descends.

Ours is the last of the free societies, and it is threatened.

By an accident the Republican Party, which had its birth in the effort to free the slave, now has thrust upon it the responsibility of saving the freedom of us all.

This is no idle statement.

Recall the solemn admonition of Washington in his first inaugural:

"The preservation of the sacred fire of liberty and the destiny of the republican form of government are justly considered, perhaps as deeply, as finally, staked on the experiment entrusted to the hands of the American people."

You know the prospect before us. Can you face your children and admit that you will let them down, sell them out and supinely watch their future destroyed?

Never!

Let us take up the challenge. If we lose, we lose the whole game. But if we win—and win we must!—there is, indeed, hope, confidence, and courage for the future, come what may.

Democrat Congress Fails the People— Solves No Major Problem

EXTENSION OF REMARKS OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a review of the first session of the Eighty-second Congress prepared by me, together with a summary of major legislation.

There being no objection, the review and summary were ordered to be printed in the Record, as follows:

DEMOCRAT CONGRESS FAILS THE PEOPLE—SOLVES NO MAJOR PROBLEM

The session of the Eighty-second Congress recently adjourned was a battlefield in which a continuous struggle was waged by the Republican membership against the Executive, whose power, ever growing through the last 18 years, now threatens to destroy the freedom of our people and undermine the common welfare.

It is most critically important that our fellow-countrymen understand the character of this conflict. Upon its outcome depends the security of our Nation and its financial and economic well-being.

At this session of the Congress some of the President's socialistic proposals, such as compulsory health insurance, federalized education, and unwarranted controls over industry and agriculture, were sidetracked or summarily rejected.

But these achievements were overshadowed by failure of the Democrat Congress to as-

sert its constitutional prerogatives in the determination of foreign policy and in providing for the national defense.

The Constitution provides safeguards for perpetuation of the Republic, through checks and balances in the development of foreign policy and national defense. They are especially designed to prevent a dictatorship by reserving to the people full sovereignty in the determination of policies through their representatives in the Congress.

Addressees by the President announcing his commitments to other countries and mere consultation by him with selected Members of the Congress do not fulfill constitutional mandate. During the first session of the present Democrat Congress there was abundant evidence that President Truman assumes the President alone possesses absolute power to commit the United States to major foreign policies affecting the security and resources of the American people.

The fundamental issue of government involved is of paramount importance to the people, because the President's foreign policies and the national defense burden incidental thereto, completely dominate the domestic economy, reaching into every household in the land. From these unfortunate policies stem all the major ills that now confront our Nation.

This Congress has failed to adopt an overall, guiding national defense policy as preparedness against the global threat of the international Communist conspiracy to rule the world.

This Congress has voted billions upon billions to implement the President's check-board foreign policies, but it has failed to comply with its constitutional responsibility to prescribe the duties and missions of the military, and to protect its prerogative of declaring war against the danger of violation by unwise policies of one man, the President.

It is mandatory that the President make full disclosure to the American people and officially to the Congress all that is involved in manpower, money, and other resources in his present and projected foreign policies.

The people and their Congress, have a right to know the full implications of the kind of defense plan for Western Europe to which the President has subscribed. They are entitled to more than "butterfly statistics" and wishful thinking on his commitments around the world.

It is for the people, through their representatives in the Congress, to determine the character of aid that shall be given in fulfillment of the North Atlantic Treaty. This right is reserved in the treaty.

The United States has complete freedom of action to emphasize ground forces or to obtain universal mastery of the air and maintain control of the seas to spearhead our preparedness for retaliation and to win if the potential enemy attacks.

Comparative costs and effectiveness and the capacity of the United States should be weighed. This is the right and duty of the Congress. It must not be usurped by the President.

This determination by the Congress becomes increasingly vital, since about 10 per cent of the appropriations for the Department of Defense is being earmarked by the administration for siphoning to Western Europe. These billions are in addition to the billions specifically appropriated by Congress for military and economic aid to Europe.

Republican Members of the Congress recognize the American people want to pull their full weight in defense of freedom, but they demand prudence and not confused frittering away of their manpower and material resources.

DEMOCRAT CONGRESS SOLVED NO MAJOR PROBLEM

The first session of the Democrat Eighty-second Congress floundered to its inglorious

end with no major problems solved, peace still the administration's will-o'-the-wisp, and these grim facts confronting the Nation:

1. The value of the dollar is being destroyed. A dollar is worth half what it was 10 years ago.

2. The President's demands for taxes are merciless. Had Congress granted all he asked for, taxes of all kinds would have taken 40 per cent of the national income.

3. Youths are helpless to plan for the future, a home and a family, because of military service that threatens to stretch out indefinitely.

4. A shrouded and devious foreign policy has condemned our soldiers to wars undertaken by Executive order, wars where victory is forbidden, wars where their blood ebbs away in humiliating stalemates—all under the fantastic notion of the President that he alone has the absolute power to order troops anywhere and into any situation which he alone deems wise for security of the United States.

5. The Internal Revenue Bureau, the engine that sucks up billions of tax money, has been revealed as a Democrat administration instrument, honeycombed with venal men who have made a practice of shaking down honest taxpayers while they, the tax collectors, were acting as partners in corruption with common criminals and gangsters. Scarcely a day passes but what an agency of the Truman administration is exposed as being shot through with fraud.

6. The White House has been shown as the headquarters of a milk coat-deep freeze bargain counter where the national assets are sold to insiders at cut rates.

7. Disclosure that pro-Communist infiltration in Government has been widespread, that Government officials were so derelict in their duty that secrets of the atomic bomb were stolen by Communist spies.

These bear evidence of the growth of a corrupt and decadent Federal autocracy which, if allowed to continue, will utterly destroy the freedom and the substance of our people.

In the face of this threatening development what have Republicans done in the Eighty-second Congress? Let the record speak.

RESPONSIBILITY OF THE DEMOCRAT ADMINISTRATION

The first session of the Eighty-second Congress was in continuous session from its convening on January 3, 1951, to adjournment October 20, 1951.

During this period the Democrat Party controlled the White House, the President's Cabinet, all major officeholders in the Executive branch and both Houses of Congress, including all committees and the program of legislation.

In a word, a Democrat administration controls the Government and must be held responsible for conditions affecting the welfare of the country.

In public addresses, the President constantly seeks to escape this responsibility. The essence of his tactics is to give himself and his Democrat Party all credit for the constructive achievements of Congress and Government agencies while denying responsibility for their shortcomings, mistakes, and failures. Whatever good is done, they have done it; but if any wrong occurs, others are responsible. The President's object and that of his party is to keep themselves in power, come what may.

But the people need not be taken in by such slick politics if they will remember the plain fact that a Democrat President, Cabinet, and both Houses of Congress means the maximum control a political party can gain over the policies and operations of the Government, short of absolute dictatorship. Such complete control carries full responsibility for the state of the Nation.

ROLE OF THE REPUBLICAN PARTY

The Republican Party has no control over legislation, Government policies and operations. Its role in Congress is narrowly limited. No Republican can be chairman of a congressional committee. Republicans are in a minority on all committees. They cannot carry through legislation on their own. They cannot take administrative steps to solve national problems or to correct abuses in the Government of the country. They have no control over the conduct of foreign relations.

But in a two-party system such as ours, the opposition party has a clear and responsible public duty to perform. In the role of the opposition, Republicans can appraise critically the promises and performances of the Democrat administration. They can call the Democrat administration to account for its failures in discharging the public trust. They can expose mistakes, corruption, and other actions harmful to the public interest. They can press for high standards and principles in the solution of public problems and offer constructive suggestions concerning them.

Finally, by public debate, Republicans can take their opposition to the people who have the power to compel the administration to safeguard the national welfare or to remove it from office.

As the record set forth below will show, Republicans vigorously performed all these duties in the first session of the Eighty-second Congress.

In the field of domestic affairs, Republicans increased their resistance to the administration's efforts to limit individual freedom and to undermine private enterprise. They fought against further centralization of power in the Federal Government which for 18 years has sapped the strength of State and local government. They exposed and resisted the administration's persistent tendencies toward socialism. Wherever it was possible, Republicans blocked the administration's attempt to use the national defense program as a cloak to put over socialized medicine, the Brannan plan for Federal Government control over the Nation's farmers, Government control of education, and other centralizing-socializing measures.

Republicans insisted that the President should stay within the framework of the Constitution and respect the American system of free Government. They opposed giving him the broad powers he sought which would enable him to dictate the course of American life. They protested his Executive order giving every department of Government the power to withhold information from the press and from the people. They exposed Government propaganda designed to cover up mistakes and corruption, and to mislead the people into accepting Government attempts to plan and to regulate their lives.

Republicans continued their 18-year fight for sound money. They pointed out that dollar prosperity is a cruel and bitter illusion when the dollar buys half its former value in goods and services. They sought with every weapon at their command to cut down the lavish and irresponsible spending of Democrat administrations, insisting that the administration practice economy in its own house before it shifted the burden of Government spending to the people by higher and higher taxes.

Today's inflated prices are the direct result of excessive Government spending. Ceiling prices, credit restrictions and other economic controls cannot maintain the value of money as fast as Government spending destroys it.

INFLUENCE, FAVORITISM, AND CORRUPTION IN GOVERNMENT

In this Congress, Republicans intensified their fight for loyalty, honesty, and integrity in Government. They exposed in detail how

Government operations were influenced and corrupted by individuals appointed by the administration and by persons high in White House favor. When Democrats, who controlled congressional committees, would have been satisfied with the exposure of a little corruption *just to take the heat off the Democratic Party*, Republicans vigorously protested and demanded full investigations. Although blocked at every turn by an administration unwilling and unable to clean its own house, Republicans succeeded in compelling disclosures of disloyalty, influence favoritism and corruption that shocked the country.

REORGANIZATION OF CONGRESS AND THE EXECUTIVE BRANCH

In the Eightieth Congress, Republicans put the Congressional Reorganization Act into operation. This was the first real attempt since 1910 to reform and to modernize the Legislative branch. But such major changes in legislative procedure as the Reorganization Act provided cannot be successfully accomplished in a 2-year Congress. When the Republican control ended in 1948, much remained to be done to improve congressional operations.

But although Democrats were in continuous control of Congress from 1949 to the present day, they did nothing to carry forward the promising start made by the Republican Eightieth Congress. Some hearings were held by Democrat committees; some legislation was proposed, but no tangible results flowed from it. Except for the changes made by Republicans, Congress still labors under antiquated machinery and processes. This is more than a problem for Congress. It deeply affects the liberties and welfare of every individual in the country. The creaking machinery of Congress is so appallingly inadequate for modern times that free representative government itself is endangered. The Democrat Congress has done little to improve the capacity of Congress to deal with modern problems, chiefly because the President and the Executive branch prefer to strengthen their own grip on the Nation and keep Congress weak.

Similar neglect marks the failure of the Democrat administration to do much of anything constructive about the Hoover Commission recommendations to eliminate waste and inefficiency in the Executive branch. A few departments made some changes and the President sent a few unacceptable proposals to Congress, but the real need of reform and modernization in the Executive branch went unanswered by the Democrat administration. The best proof of this situation lies in some 19 proposals filed by the Citizens Committee for the Hoover Report with the Senate Expenditures Committee. None of these proposals has been enacted into law.

EIGHTY-SECOND CONGRESS FUMBLES RESPONSIBILITIES

The political party in control of a Congress stamps it with a clear pattern of party policy and behavior.

It is no mystery, for example, that the Republican Eightieth Congress balanced the Federal Budget and lowered taxes while all Democrat Congresses since 1933 never balanced the budget and continuously increased taxes. The explanation is that the Republican Party has a high regard for sound money, for making outgo balance income in Federal revenues, and for allowing the individual to spend his own money rather than having Government tax and spend it for him.

The whole tenor of the Democrat Party has been in the opposite direction, as the record abundantly shows. Similar comparisons on many other subjects show equally clear differences in party performances.

When the record of this Congress has been fitted into the perspective of history, it will be found that its major tasks were to deal

with the tragic consequences of unwise policies, serious mistakes in judgment, and the highly unethical conduct of many persons high in the Democrat administration which controlled the Government for 18 years.

Time is running out on unwise policies, obscured so long by expedients, stop-gaps and flim-flam. Mistakes in judgment are catching up with the administration which made them. Unethical conduct, at last, is being recognized for what it is and is being brought out into the open.

In view of these conditions, the Democrat Eighty-second Congress had little choice but to direct most of its major legislation to the solution of grave problems created by Democrat policies and administration.

Efforts of Democrat Party leaders in Congress to put a new face on these attempts will not obscure the stubborn facts. For example, Democrat leaders in Congress have declared that this Congress will go down in history as the "great preparedness Congress." This is an attempt to turn a grievous fault into a virtue. The people will certainly want to know what the administration did with the \$50,000,000,000 Congress provided for national defense in the 4 years 1946-50. The testimony from many sources in the MacArthur hearings of our weakness in armaments in Korea was shocking.

Moreover, the people will want to know about "preparedness" for what? We had just achieved a victory in war at enormous expense. The Democrat administration had promised us peace. But in the 4 years since the close of a victorious war they conducted a checkered foreign policy and permitted Russia to be built up into such a menace that we now have to arm ourselves to the teeth at a feverish pace. This Congress may be called a "preparedness Congress" to be sure, but is it preparedness to bail out the administration's grave mistakes and incompetence?

The people will ask similar embarrassing questions about other self-praise coming from Democrat leaders in Congress. One such leader says: "This Congress has thrown the might of the greatest nation on earth in defense of freedom in the global struggle against the slavery of Communism." Democrats are given to such grandiose, chest-beating phrases. They are adept in turning faults into virtues. In fact, the instances of dissimulation are so many and so notorious, that it is difficult to know where deception ends and sincerity begins.

But the people want to know why must American lives be sacrificed all over the world? Why must American soldiers be stationed permanently abroad? Why must the United States itself become a garrison state with compulsory military service? Why must American labor and resources be withdrawn from the American people and distributed in billions to arm the world for another war? Why must taxes be at the highest level ever paid in peace or war? Can this be magnificent achievement, or is it a desperate attempt to cover up a bankrupt foreign policy?

Every examination of this session of the Eighty-second Congress reveals that its major legislation had to be enacted because of unwise administration policies, thereby compounding incompetence.

Having grounded past programs on a policy of cheap money, Democrats found this Congress compelled to deal with a 53-cent dollar and with increasing inflation of prices. This, together with the home and foreign defense program, is the reason for production- and price-control legislation.

Having followed a policy of extravagant Government spending Democrats found this Congress compelled by interests favored by the administration to continue spending on a lavish scale. Administration policies offer no hope of postponing less important programs as an offset to huge defense expendi-

tures. This accounts for the unprecedented \$97,000,000,000 appropriations.

Having adopted policies of spending without regard to Government income or balanced budgets, Democrats found this Congress compelled to deal with the rising danger to Government financial stability. This accounts for legislation offering interest inducements to discourage people from cashing Government E bonds and for the third tax increase in a little over a year, making the present tax level the highest in the history of the country.

Having promised the American people "freedom from fear," Democrats found this Congress compelled to deal with the greatest fear of economic instability and fear of foreign war which this country has ever known. This accounts for most of the legislation dealing with controls, defense, and foreign aid.

Having miscalculated Russian policy and having followed policies encouraging Russian expansion, Democrats found this Congress compelled to station American troops in Europe for the first time in a period of peace, to increase our Armed Forces in the Korean war, to establish a network of military alliances of doubtful value all over the world, and to finance the rearmament of these foreign allies. This accounts for the huge defense appropriations and for the continued large foreign-aid legislation.

Having built a Government bureaucracy to huge proportions, equipped it with unprecedented powers and money, and projected the Government into every field of private, State, and local affairs, Democrats found this Congress compelled to deal with favoritism, influence, unethical conduct, waste, and corruption in Government. This accounts for the extraordinary series of congressional investigations with findings that shocked the Nation, and even now the surface only has been scratched.

Having consistently followed a policy of discrediting critics and opponents, of name calling, of withholding and coloring of information, of using fine words to cover opposite intentions, and of deliberately flouting the law and intent of Congress, this administration continued to widen the breach between the President and Congress which endangers the people's faith in our system of government. This accounts for the "great debate" in Congress on troops to Europe which centered on Congress' distrust of the administration, for the refusal of the Senate to approve many Executive nominations, and for the writing into dozens of laws explicit directions forbidding certain Executive actions without prior approval of Congress.

In summary, the Democrat administration and prior Democrat Congresses having sowed the wind, this Congress—the Democrat Eighty-second—was confronted by the whirlwind. This is evident from the details of major legislation enacted in the session just ended.

APPROPRIATION AND EXPENDITURES

Congress enacted appropriations which reached the highest total in the Nation's history except for the peak years of World War II.

The regular and supplemental appropriations for the fiscal year 1952 acted upon during the year aggregated \$84,817,960,084. The addition of \$6,808,581,032 in supplemental amounts for fiscal year 1951 approved by this Congress boosted the total to \$91,626,541,716. To this amount there must be added over \$6,000,000,000 in permanent and indefinite appropriations, most of which is for interest on the public debt. The grand total, therefore, exceeded \$97,600,000,000.

Last year, in the second session of the Eighty-first Congress, a total of \$81,044,768,684 was appropriated. Thus, in a matter of months, appropriations have soared to the astronomical sum of \$178,600,000,000.

and yet the money demands of the administration continue unabated.

The postwar lows were the \$35,700,000,000 appropriated in the second session, Seventy-ninth Congress, in 1946, and the \$35,900,000,000 appropriated in the first session of the Republican Eightieth Congress, in 1947. It was the Eightieth Congress that lowered taxes and balanced the Federal Budget for the first time in 16 years, with a surplus of more than \$8,000,000,000. Republicans proved that Government spending and taxes could be sharply reduced without sacrificing essential Government services.

High as the appropriations of this session were, they would have been far higher if President Truman and Executive branch officials had been permitted to have as much money as they wanted.

Their spending mania proved so disturbing that one important Democrat leader of the Congress, Chairman GEORGE, of the Senate Finance Committee, declared the tax bill which he managed on the Senate floor would be the last tax-increase bill "short of an all-out war or war crisis" that he would support. Also, on the last day of the session, Senator GEORGE was moved to comment "we cannot prevent corruption in government when reckless expenditures of public moneys, such as we are witnessing now, are taking place."

Republicans, aided by the more economy-minded among Democrats, did have some success in trimming administration requests in the processing of the appropriation bills through Congress. These cuts brought the total of the appropriations to about \$4,750,000,000 below the budget estimates. To this extent, economy advocates in Congress had met President Truman's challenge flung at them last February 8. At that time, at a press conference, he had said his budget was good and tight and he dared Congress to do anything about it.

Not all of the vast sums appropriated will be spent in this fiscal year, simply because the free-spending administration cannot get delivery of goods that fast. Nevertheless, the Federal Government's estimated outgo exceeds its anticipated income from taxes and other revenue sources by a considerable amount. This is the outlook, even though the new tax bill raises prospective annual tax receipts to a record of more than \$60,000,000,000. Thus the Government will again be forced to borrow money which will intensify the problem of inflation and further weaken the value of the dollar.

Actual expenditures for this fiscal year ending next June 30 are expected to be in the neighborhood of \$70,000,000,000 and to go beyond that amount by \$15,000,000,000 to \$20,000,000,000 in fiscal year 1953, assuming that a third world war will be averted.

Chief responsibility for bringing about economy in Government rests primarily upon the President and the Executive branch. They know the details of Government projects and operations. They have hundreds of professional budget employees, distributed in every agency of Government, who work full time throughout the year.

Compared with the Executive branch, Congress is appallingly understaffed. The Appropriations Committees of both Houses have a total staff of 35 persons (professional and clerical) to deal with the gigantic appropriations in more than a dozen major appropriation bills. Sometimes a single staff member has to review a bill appropriating billions of dollars.

Democrats in control of Congress have done nothing to improve their antiquated and inadequate machinery. They have done little to impress upon a Democrat President, who is in control of Government spending, the urgent need for economy and elimination of waste. They rejected the idea of a single omnibus appropriation bill, which

offers some measure of congressional control over spending and economy. Under Democrat control of both the Executive and Legislative branches of Government, the volume of Government spending has mounted higher and higher. All history proves that loose fiscal policies result in collapse of government.

NATIONAL DEFENSE

In national defense Republicans constructively criticized what they considered to be weaknesses in policy making and execution. They exposed and resisted wasteful and inefficient handling of defense matters. At the same time they cooperated in measures to correct deficiencies in and to expand military programs. A strong national defense has always been a basic principle of the Republican Party.

In the face of the fighting and bloodshed in Korea and the Communist threat generally, Congress extended the draft, lowered the draft age from 19 to 18½ years, lengthened the period of induction from 21 to 24 months, and established a commission to recommend a program of universal military training.

Close to \$57,000,000,000 was provided in the regular defense appropriation bill.

Additional billions were voted for atomic development, for air power expansion, and for construction of military bases in continental United States and at strategic points throughout the non-Communist world. Reserve funds were voted to the Maritime Board for expansion of the merchant marine.

Congress authorized the Navy to spend \$2,700,000,000 on a ship conversion and construction program, including a 57,000-ton aircraft carrier equipped to handle atomic bombers. This recalled what had happened to the super aircraft carrier approved by the Eightieth Congress. President Truman scrapped construction of that carrier on April 23, 1949, after \$20,000,000 had been spent on it.

In a move also to rectify its mistake in restricting the Nation's air power, the Truman administration asked this Congress to approve a build-up of the Air Force to 140 groups, or wings. This was a considerable change from the position President Truman took in October 1949 when he impounded \$978,750,000 of Air Force funds, refusing to allow more than 48 groups. The Republican Eightieth Congress had foreseen the need of a strong air force and in 1948 appropriated funds for a 70-group force. The President persisted in cutting this back and holding to only 48 air groups until after the Korean war broke out in 1950.

Safeguards against emasculation of the Marine Corps were written into law. The marines are to have three divisions and three air wings.

Efforts by Congress to legislate on military manpower matters were hampered by confusing estimates of the number of persons needed for the armed services. The first administration estimate after the Red attack in Korea was 2,100,000. Then it was 3,462,000 last January, and it is now said the Armed Forces must expand in size to 4,000,000.

Another manpower problem which plagued Congress was the Defense Department's mis-handling of Reserves. Inactive reservists were ordered into active military service ahead of Army and Air National Guard units and units of the services' Organized Reserves. In other words, those who should have gone last were called first, and those who should have been called first were called last. Also a number of Army and Air National Guard units throughout the United States were stripped of men and equipment with a consequent loss of efficiency and combat potential.

In investigating the strategic materials program the Senate Preparedness Subcommittee discovered that the administration

had fallen down on the job in stockpiling. Most glaring of these related to tungsten and tin.

The subcommittee concluded that "our Nation's tungsten position is little short of desperate," putting the major blame on administration officials.

In the case of tin, the subcommittee discovered that the United States Government was paying exorbitant prices for tin, when it was not necessary. After the tin report became public, the Government announced suspension of the tin purchase program, and the price of tin promptly fell.

Also in a recent report the Preparedness Subcommittee, while noting some improvement in the Nation's rubber situation over what it was in 1950, made these major criticisms: (1) a slowdown in the stockpiling program last spring was against the national interest; (2) despite the efforts to cut off exports of war-vital materials to the Communist bloc of nations, exports of rubber to China increased substantially in the first 5 months in 1951; (3) there is as yet no centralized direction and operation of our natural-rubber program; (4) little progress has been made in the development of a Latin-American natural-rubber program; (5) no friendly country, with the exception of Canada, has synthetic rubber-producing facilities in operation. Idle facilities in Western Germany are being reactivated only in small part.

With a shift in emphasis from economic to military aid, the sum of \$7,300,000,000 was appropriated for the use of foreign countries. But this is not the total fund of American dollars for foreign countries. Several additional billions are covered in the regular military appropriations, in funds appropriated for the Export-Import Bank, in State Department appropriations, and in other domestic measures. If these could be segregated and added to the foreign aid total, the funds would double the amount stated under the foreign aid label.

USING NATIONAL DEFENSE AS A CLOAK FOR SOCIALISM

The President and his administration planners repeatedly used the cloak of national security to push socialistic aims, to expand Government operations and controls, and urge other measures limiting individual liberties and private enterprise.

Some of these attempts succeeded in part. Others were rejected.

Congress extended the Defense Production Act of 1950 but refused to give the President the additional, dictatorial powers he requested. These powers would have given the Federal Government complete domination over the national economy.

Congress also incorporated some limitations into the Defense Housing and Community Facilities Act which, together with other bills, included the administration's back-door approach to Government housing and Federal aid to education.

Bills leading in the direction of socialized medicine were rejected altogether by the Congress.

Where Republicans could not prevent administration attempts to use national defense as a subterfuge for socialistic measures, they made every effort to write safeguards into the laws to protect the liberties and rights of individuals and the system of private initiative and enterprise. An example is the requirement that credit restrictions on home purchases be relaxed in critical housing areas to insure the use of private capital in preference to Federal Government operations.

Nevertheless, the administration found the national defense to be a convenient cloak for obtaining legislation to increase Government powers. The fact is inescapable that, as long as a Democrat administration is in office, socialistic programs and expansion of Government powers will be pushed

by Government planners wherever they can find an opening.

In the case of national defense as in so many other critical problems, the administration lacked foresight. Urgently needed actions were delayed until events overran administration preparations, as did Russian aggression in war in Korea. Then the administration sought to make up in feverish haste, waste, and controls what should have been wisely, calmly, and systematically undertaken earlier. This incompetence is largely responsible for the emergencies and crises with which Democrat administrations have kept our people in turmoil for 18 years.

FOREIGN POLICY

The foreign policy problems which confronted the first session of the Eighty-second Congress served once again to confirm the desolate truth that the Yalta agreement of February 1945 is the watershed of modern history.

Before that time, despite many most deeply questionable decisions by the Executive, the security of the United States was indisputable and the advantage lay with our people.

The tragic surrenders at Yalta, ratified and confirmed by President Truman at Potsdam, compromised all.

The Yalta sell-out

It was at Yalta that the administration, despite the battle cry of the Four Freedoms, turned the Poles, the Czechs, the Hungarians, and the Balkan peoples over to slavery without a word of protest. It was at Yalta that the administration broke its pledged word and betrayed Chiang Kai-shek who for years had carried on the war with Japan alone. It was at Yalta that the administration secretly gave to Russia the Chinese territory of Port Arthur, territorial rights in the Chinese port of Dairen. It was at Yalta that the administration made the deal whereby Manchuria was thrown open to the Chinese Communists, the same group that has cost more than 100,000 American casualties on Korean battlefields.

Since VJ-day in 1945—six short years!—billions of treasure have been spent in military expenditures, American soldiers have died by the thousand and the peace of mind of our countrymen has been shattered and our security put in jeopardy. All this was done by an administration that had promised peace and security.

China is prostrate under Communist control—largely because of the devious policy pursued by our State Department. We are still locked in a bloody and stalemated Korean war, a conflict which itself is the inevitable result of decisions made at Yalta and Potsdam.

The skeleton in the administration closet

What the administration dare not admit is that their mistakes and their long wooing of Russia gave the Soviet Communists the opportunity to threaten freedom throughout the world. What a record to take to the American people! What a reason to ask for a new grant of power! Desperately and administration now attempts, through its denunciations of Russia, to conceal the fact that the officials who made these ruinous decisions are still in office, still directing power.

On every hand the undermining influence of Russia can be seen and, as this report is written, in November 1951, demands are rising in both Egypt and Iran for alliances with Russia if concessions from the West are not forthcoming.

Confronted by these dismal circumstances Republicans in the Eighty-second Congress devoted themselves, as far as foreign policy goes, to unremitting effort to redress the balance abroad now tipped against us.

Efforts to block Communist China

Through a series of resolutions,¹ passed by the House and Senate, sometimes individually, sometimes jointly, they sought to prevent the recognition of Communist China, to prevent her admission to the U. N., to have her declared an aggressor in Korea, to have a U. N. arms embargo passed against Mao's regime.

Troops for Europe

Through Senate Resolution 99 the Senate, with Republicans leading the fight, served notice on the President that not more than four additional divisions of ground troops should be sent to Europe without congressional approval. Congress no longer trusted the administration's judgment in scattering American soldiers throughout the world. But this Democrat Congress, with administration lieutenants in key positions, has failed to bring order out of the confusion.

The Republican fight to keep war material from Russia

By a unanimous vote the Eighty-second Congress passed the Republican Kem amendment to an appropriations bill, which provided that no economic or financial assistance might be given to any country which exports arms, armaments, or military matériel to the Soviet Union or its satellites.

Boondoggles abroad

Republicans in the Eighty-second Congress worked ceaselessly to halt the indiscriminate squandering of billions of the taxpayers' money abroad. They asked why Americans who are hard pressed to pay their own rent with depreciated dollars, should have to pay for housing projects abroad. All along the line, Republicans in the Eighty-second Congress cut down foreign WPA projects and sought to force a measure of control on the Executive.

The Republican fight against Executive dictatorship

All these efforts have only served to underscore the fact that no clear and forthright foreign policy is possible until this administration is defeated. The whole system of checks and balances is being undermined by Executive erosion. Our representative government is being attacked at home as well as abroad. The administration which presided over the disasters abroad is still in power and the Executive, in his determination to pursue a policy—shown to be bankrupt in so many instances—continues to make arbitrary, unilateral decisions without consulting or warning Congress.

Intervention in Korea, the announced intent of sending troops to Europe (and anywhere else), the giving of ECA allocation authority to the State Department in April 1951 in defiance of the fundamental law that set up the ECA, the abrupt dismissal of General MacArthur and the successful insistence upon closed instead of open hearings at the subsequent investigation, the emasculation of the Kem amendment by letting down the bars to war shipments to Russia, and the interim appointment of Philip Jessup as a delegate to the United Nations General Assembly after Senate subcommittee disapproval—all these are examples of the President's high-handed and dictatorial line of action. Nor can the Executive claim that his actions have brought success. The failures are obvious to all.

The President as autocrat

What has happened is that the Executive, in effect, has appropriated the War Power to himself. Once a decisive move is made, demands are served upon the Congress for money and legislation to implement the

decision. Through this device the threat now is very real that the country may be railroaded into socialism under the pretext of preparedness against war. Nothing is more clear to Republicans in Congress than this peril which now confronts all of us.

STATE OF THE NATIONAL ECONOMY

The biggest domestic problem facing the first session of the Eighty-second Congress was inflation. By the time the Congress convened, inflation had already built up considerable steam. In the 6 months following the invasion of Korea the cost of living had risen 6 per cent. Over 3 per cent of the rise occurred after September 1950 when Congress gave the President broad powers over economic affairs which he failed to use. Not until prices reached the highest level in our history did the President impose a price freeze.

Senator BURNET MAYBANK, of South Carolina, Democrat chairman of the Banking and Currency Committee, charged during debate on the Defense Production Act amendments this year that President Truman apparently delayed putting controls into effect last year because an election was "coming up" in November. MAYBANK also said the administration "apparently wishes prices to rise so that increased taxes could be collected from large incomes and thereby attempt to balance the budget." If these charges are true, it would not be the first time that the administration has played politics with the national interest.

In July 1950 the President claimed he did not want price control authority. But after he permitted prices to rise to inflationary peaks without using the controls given to him at that time, the President, in April 1951, requested not only an extension of controls, but much more drastic powers over the whole economy.

Where legitimate need for control powers was shown, Republicans supported the required legislation. But they refused to go along with the President's request for powers which would permit him to bring about complete Government dictation over the country's economic system. The Republican position on this point was so fundamental and strong that enough Democrats joined to prevent the President from having his way. The President asked the Eighty-second Congress to grant him authority to set up Government-owned plants, to establish Government corporations in competition with private industry, to disperse industrial facilities, to set up a system of so-called production subsidies, and to license almost all types of business.

In the 1951 amendments to the Defense Production Act of 1950, Congress provided for price roll-backs and roll-forwards, relaxed some credit controls, banned slaughtering quotas for livestock, and set up import controls on fats and oils.

There was little the President liked about the bill, although it was sent to him by the Democrat-controlled Congress. He immediately requested repeal of the sections on livestock quotas, price changes, and import controls. While agreeing to hold hearings on the proposed changes, Chairman Maybank accused administration officials of criticizing the act "even before the ink is dry on it" and failing to give it "a fair trial." The Eighty-second Congress did not complete action on proposed changes before the first session adjourned.

It is clear that the President wants to use the control legislation as a political instrument for himself and against Republicans. He did not use powers given to him in 1950, in order to favor interests from which he seeks political support. As a result prices rose sharply by January 1951.

In the recent session, he deliberately singled out certain amendments to the price

¹ H. Res. 77, S. Res. 35, S. Res. 36, H. Res. 96, S. Con. Res. 31.

control law and claimed them to be "unworkable." Repeatedly he referred to the Capehart amendment and to the Butler-Hope amendment. These amendments were approved in Congress by Democrats and Republican alike, but by labeling them as "Republican" amendments and "unworkable," the President hoped to put himself in the position of telling the people that he could have protected them from high prices if it had not been for Republicans.

The time is past when by such tricks as these the President can shift responsibility for the Nation's welfare from himself and his party to his political opponents.

During the first session of the Eighty-second Congress there were other disturbing evidences of politics in the economic control agencies. Economic Stabilizer Alan Valentine resigned, declaring that he was "forced to choose between being a participant in large-scale patronage or of being a victim of it." Former Gov. M. E. Thompson, Democrat, of Georgia, also resigned from the Office of Price Stabilization in protest against "political" control and general wastefulness.

Republicans brought to light additional instances of Government waste, and within the limits of a minority party, sought to correct these situations. Democrat administration leaders showed little interest in eliminating waste. The President submitted only one Government reorganization plan—to set up a single administrator of the Reconstruction Finance Corporation. This plan came only after disclosures of influence, favoritism, and other improprieties in RFC.

Otherwise, the Hoover Commission recommendations, calculated to save billions of dollars, were ignored by the administration and by the Democrat leadership in Congress.

Instead of adopting Hoover Commission recommendations for streamlining the Post Office Department, the Democrat leaders in Congress pushed through a measure increasing postal rates so as to bring in more revenue from its operations. The penny post card which symbolized low-cost communication for the American people, became the latest victim of the Democrat administration's inflation. Despite receiving more money, the post office continued to show large deficits, at the same time reducing postal services.

Republicans in the Eighty-second Congress gave support to continuing programs for agriculture, reclamation, flood control, housing construction, veterans' benefits, and the normal operations of Government that must be carried on within the limits the Nation can afford.

Taxes

At the request of the President, the Democrat-controlled Eighty-second Congress enacted the third tax increase since June 1950. Discussing the new bill, Senator George, Democrat of Georgia, pointed out that the two tax bills passed in late 1950 increased the tax burden of the American people "by almost \$10,000,000,000." The new tax law is estimated to increase that tax burden by \$5,691,000,000 additional.

This is the heaviest tax program the American people have ever had to support during peacetime. But it still isn't enough for the President. His original request was for an increase this year of \$16,000,000,000 instead of the \$5,691,000,000 which Congress approved.

The new law provides a tax increase on individual incomes of approximately 11 per cent. Normal and surtax rates on corporations are increased from a maximum of 47 per cent to 52 per cent. The excess profits tax credit is reduced from 85 to 83 per cent for firms using average earnings methods. Mutual savings banks, building and loan associations, and co-operatives are taxed for the first time on unallocated income. Excise taxes on numerous items are changed, some increased and some decreased.

As the minority party, Republicans lacked the votes to make major changes in the tax bill as it went through Congress. In the House the Democrat leadership forced through a gag rule for consideration of the tax bill which prevented any individual Representative from offering any amendments to the bill on the floor of the House. No matter how inequitable a provision might be, it could not be altered except with concurrence of the Democrat-controlled House Ways and Means Committee. A Republican motion to recommit the tax bill to this committee was defeated on a party-line vote.

On the Senate side, Republicans won acceptance of the Jenner amendment prohibiting the Federal Government from denying social security funds to States that permit names of welfare beneficiaries to be made public. This was a victory on behalf of State governments over Federal bureaucracy, which had already suspended Federal payments to the State of Indiana.

In the Eightieth Congress Republicans cut the cost of Government, voted an expanded Defense Department, cut taxes, cut the national debt, and still produced an \$8,000,000,000 surplus. This record shows how the Republican Party operates when it has control of the Congress.

Under Democrat leadership the Federal debt has increased from \$22,500,000,000 in 1933 to \$256,600,000,000 in 1951. The current debt amounts to about \$6,000 per family. Instead of cutting Government expenditures, the Democrat Party has always imposed higher taxes.

The present Democrat President has yet to propose a cut in his budget for fiscal 1952. The President has referred to it as a balanced budget, providing the full tax increase is granted. But this budget does not even include the cost of the Korean war. In those circumstances, how can the budget be balanced?

A member of the President's own political party, Senator Brax, complained, "Actually, the domestic-civilian items in the President's budget include all the major socialistic programs of recent years—socialized housing, agriculture, and medicine, and federalized education. . . . While the domestic-civilian programs include the so-called defense production and civilian defense items, many of them are both priced excessively in the budget and are open to boondoggle exploitation by federal, state, and local agencies."

Nevertheless, the Democrat Party leadership seeks to convince the Nation that the administration's program is a pay-as-you-go plan. Such talk falsifies reality. The tax bill just enacted will not even cover the increased cost of the defense program resulting from inflation. Former Defense Secretary Marshall told Congress that price increases since the Korean war began have taken "\$7,000,000,000 out of the \$35,000,000,000 authorized" for national defense during fiscal year 1951.

Similarly, Democrat spokesmen insist that the administration practices sound financing. Yet the purchasing power of the American dollar continues to decline at an alarming rate. The administration's Commerce Department set the purchasing value of the dollar (August 1951) at 44 cents in wholesale prices and 53.9 cents for consumer prices in general, based on the 1935-39 average. This is a decline of 4 cents within a year. Commerce Department figures, coupled with a 22 per cent decline predicted by the staff of the Joint Committee on the Economic Report, indicate the 1954 purchasing power of the dollar will be 39 cents or lower, based on a 1935-39 average of 100. These are hardly "butterfly statistics."

Inflation is a fact. When Defense Mobilizer Wilson predicted increasing inflation unless the Defense Production Act was changed to suit the President, Republican members of

the Banking Committee reminded him of the administration's August 3 wage stabilization order permitting "escalator" cost of living wage increases. Mr. Wilson was forced to admit the administration has "built an automatic inflation machine" which can't be stopped.

To label the current inflation as unprecedented prosperity, as some Democrat Party leaders are doing, is to cover with glittering words what actually is a dangerous threat to the Nation. The factors of runaway inflation are still present. Accelerated Government spending is applying increasing pressure on those factors. Unless a realistic approach is taken to the problem, the bubble of false prosperity will burst, to the delight of the Kremlin.

INVESTIGATIONS

More than 130 different congressional investigations were in progress during the first session of the Eighty-second Congress. A political fact of great importance is concealed behind this figure. Most of the standing committees of both Houses are regularly engaged in investigations, but the sum total of these would come nowhere near 130.

What explains the figure? A great part of the explanation is this: The Eighty-second Congress was engaged in almost continuous conflict with the Executive, attempting to pry loose information essential in the drafting of legislation. The long delay in many appropriation bills, for example, was caused by the fact that the sums asked by the Executive were enormous and the justifications of what the money would be spent for were meager.

Two main investigation groups

There were two groups of investigations of special importance.

The first group was concerned, in one way or another, with the conduct of foreign policy.

The second group—and the work is by no means completed—uncovered evidences of corruption, favoritism, and waste in the Executive branch.

Taken together, they are really parts of an enormous whole—the two groups of inquiries show that while the administration is pouring out blood and billions abroad, at home the Democrat National Committee has been turned into a bargain counter for the disposal of national assets to insiders at cut rates.

What was going on abroad

MacArthur and the Far East

On April 10, 1951, President Truman abruptly discharged Gen. Douglas MacArthur from his Far Eastern commands. Three days later, on a request of Senator Styles Bridges, Republican, New Hampshire, the Senate Armed Services Committee voted unanimously to investigate.

From May 3 to June 27, 1951, this inquiry, made in concert with the Senate Foreign Relations Committee, developed into an examination of our entire Far East policy. Republican efforts to force open hearings failed, but the pressure at least brought about the continuous issuance of censored testimony. This was no casual examination. The administration's Far East policy had collapsed in a bloody tragedy and General MacArthur was being broken because he wanted victory.

The Struggle for the Facts

The committee sessions—more than 2,000,000 words of testimony were published in five volumes—became an intense and bitter struggle to compel the administration to give all the facts about its secret maneuvers in respect to the Chinese Communists, the truth about Formosa and what was really being planned in regard to the Korean war and the recognition of Red China.

The Republican Report on MacArthur

The whole story has yet to be told but Republican Senators forced enough into the record to enable Senator BRIDGES and seven colleagues to issue, on August 20, 1951, a 104-page report on the investigation. The report attracted extraordinary attention throughout the country, many newspapers printing it verbatim. Unanimous consent was granted Senator CAIN, Republican, Washington, to have the report printed as a Senate document (S. Doc. 69, September 5, 1951).

The Institute of Pacific Relations, Jessup, and the State Department

Two months before the MacArthur investigation got under way, on February 14, 1951, Senator McCARRAN's Internal Security Committee (a subcommittee of the Senate Judiciary Committee) began to take apart the history of the Institute of Pacific Relations. The personal ties between this private organization and the State Department had been very close in time past and many of the IPR's officials had, in varying degree, Communist associations.

A Republican's Revelations

Philip C. Jessup, now United States Ambassador at Large, had been chairman and a trustee of the IPR. On September 25, 1951, Prof. K. W. Colegrove, of Northwestern University, testified about a State Department conference over which Jessup presided on October 6, 7, and 8, 1949. Former Gov. Harold Stassen was another witness who had been present at the same meeting.

The point of the testimony of these two witnesses was that at these meetings, over which Jessup presided, strong argument was made by Owen Lattimore and others for the recognition of Communist China, and that Jessup, in conversation with Stassen, endorsed the logic of these views. General Fortier, another witness, stated that Jessup had taken the same line in conversation with him.

Where the Investigations Linked Up

Thus the MacArthur and Internal Security investigations dovetailed at various points, and most certainly affected the later Foreign Relations Subcommittee hearings on the nomination of Jessup as a delegate to the U. N. General Assembly. This latter subcommittee disapproved of the nomination—3 to 2—but the President disregarded the findings and gave an interim appointment to Jessup.

Despite continuous exposures of policies favorable to Communism in his official family, the President persists in denying them and stubbornly refuses to cooperate with his own Democrat-controlled Congress.

Investigations on the home front

As the investigations of the Special Committee on Organized Crime, the Banking and Currency Committee investigation of the RFC, and other inquiries of the Eighty-first Congress moved on into the Eighty-second Congress, it became clear that their disclosures interlocked. One disclosure threw light upon another. House investigations began to edge nearer Senate investigations. It seemed not impossible that, before the probes were completed, the entire Executive branch would be revealed as flustered with corruption, extravagance and betrayal of public trust.

As the session closed, inquiries had begun into questionable aspects of the administration's disposal of enemy property in this country seized at the beginning of World War II.

The Tax Revenue a Democrat Slush Fund

What has happened is that during the past few years the Federal revenue laws have been breached from almost every angle. The administration demands enormous taxation to support its "world responsibilities." As this Niagara of tax money rolls in upon

Washington, Executive functionaries and operatives at Democrat National Committee headquarters became brokers of favors, contracts, and deals.

The RFC

The Banking and Currency Committee investigation of the RFC (especially the blistering minority report of Republican Senators BRICKER and CAPEHART) showed the close connection between the RFC and the Democrat National Committee.

The Lithofold Deal

The Senate Committee on Expenditures, in turn, followed up the American Lithofold Corp. case. Both Democrat Committee Chairman William Boyle and James P. Finnegan were involved. Finnegan was an attorney on the payroll of Lithofold while simultaneously acting as tax collector at St. Louis, Mo. Boyle also was in the pay of the company. Lithofold got more than half a million dollars from the RFC after having been turned down three times.

Selling Postmasterships

Yet again the Democrat National Committee and the Post Office Department were shown, by the Senate Committee on Expenditures, to have been involved in the sale of postmasterships in Mississippi. Evidence has been disclosed that members of the Democrat National Committee in Michigan have been shaking down Civil Service postmastership candidates for the Democrat slush fund. (See the Appendix of the CONGRESSIONAL RECORD, p. A5752.)

Grand Jury Indictments of Internal Revenue Agents

When Congress adjourned grand juries from coast to coast—in San Francisco, St. Louis, New York, and Boston—influenced by the work of Congress as well as acting on locally furnished evidence, were grinding out indictments.

Internal Revenue officials have been found to be involved in.

(1) Attempted shakedowns of persons in tax difficulties, as in the case of Collector Delaney, of Boston.

(2) Failure to prosecute tax fraud cases where underworld big shots are concerned, as in the cases of Costello, Adonis, and Guzik.

(3) Accepting fees from firms under an official's jurisdiction, as in the Finnegan case.

Deals in Defense Supplies

In the House Expenditures Subcommittee investigation of Army deals in connection with the Detroit and Toledo arsenals, General Crawford was found to be compromised by the acceptance of favors but the Executive was so callous to dubious conduct that the General was simply transferred to another job.

Still another House Expenditures Subcommittee investigation revealed that after the outbreak of hostilities in Korea, the military were buying through favored middlemen—not only goods once declared surplus and given away to European countries, but engines and manufactured articles furnished the British via ECA.

Thus foreign policy and domestic policy meet at the trough. High service officers and civilian officials join in the business of sharing 53-cent dollars among themselves.

CONGRESS AND THE PRESIDENT

So overbearing have the President and the Executive branch become in their relations with Congress that something of a civil war between the Executive and the National Legislature marked the first session of this Congress. It centered about the President's efforts to push socialism in the guise of national defense, his open defiance of laws passed by Congress, his spendthrift policies at home and abroad despite the threat of ruinous inflation, and the mounting proofs of influence, waste, and corruption in Government operations.

The President repeatedly used the Executive order to get around existing law, to accomplish objects which Congress refused to enact into law, and to accomplish ends he undoubtedly knew Congress would reject.

Congress rejected an administration proposal to disperse industrial plants. Such a dispersal program would have disorganized the entire economic system. But shortly after Congress roundly defeated the proposal, the President issued an Executive order under which such a dispersal program may still be accomplished.

By his National Security Order, the President made it possible for Government agencies to withhold and to censor information from the press and public and even Congress may be denied information it needs in order to legislate properly.

Republicans entered a strong protest against censorship and Government suppression of information. Forty-four of the 46 Republican Senators comprising the minority representation in the Senate joined in signing a manifesto attacking the order as an invasion of the right of the press to criticize and of the right of the people to know the truth about their Government. Republicans also introduced bills to break this censorship of public information.

The President signed the law containing the Kern amendment barring economic aid to countries selling to Communist countries materials which could be used in building their war machines. The amendment contained a clause permitting a few exceptions in special cases. The President promptly used this clause not for special cases, but to exempt from the ban India and all of the Western European countries receiving economic aid. His act completely nullified Congress' determination.

The President asserted the power to send American troops throughout the world as he pleased. This would mean a military dictatorship over the lives of American citizens. Congress refused to approve such a grab of power and protected the people by Senate Resolution 99 expressing disapproval of the President's sending more than four divisions of ground troops to Europe without first obtaining congressional authorization.

Republicans took the initiative in this historic stand against usurpation of power by the President, Senate Resolution 99 being the substance of a resolution introduced by the junior Senator from Nebraska [Mr. WHERRY].

To protect domestic producers from serious injury through administration tariff cuts, Congress wrote certain safeguards into the Reciprocal Trade Agreements Act.

Although the President repeatedly claims to seek peace, to protect the people's liberties, and to preserve the American system of individual initiative and private enterprise, his actions speak otherwise.

The President and his Executive branch persistently expand their powers, spend as they please at home and abroad, flout the law, push socialization and Government controls of American life, and suppress information about what they are doing.

Because of this practice of saying one thing and doing the opposite, a feeling of distrust marked the attitude of Congress in its dealings with the President and the Executive branch.

The first session of the Democrat-controlled Eighty-second Congress ended with a Nation in confusion and false prosperity, fearful of runaway inflation, burdened by mounting taxes and controls, struggling to maintain its freedom against the pressures of its own Government, and fearful of foreign invasion for the first time since it won its independence.

The present Democrat Congress under New Deal-Fair Deal leadership has failed to cope with these problems and lead the way to durable peace and solid prosperity in a free economy.

MAJOR LEGISLATION ENACTED BY THE EIGHTY-SECOND CONGRESS, FIRST SESSION

AGRICULTURE

Sugar Act amendment (Public Law 140; approved September 1, 1951)

This measure extends to December 31, 1956, the authority of the Secretary of Agriculture to readjust domestic sugar production and to fix sugar import quotas, and to June 30, 1957, the excise and import tax of 50 cents a hundred pounds.

Farm mortgage loans (Public Law 123; approved August 23, 1951)

This act raises limitation on Bankhead-Jones Farm Tenant Act loans from \$5,000 to \$10,000, and initial production loans from \$3,500 to \$7,000 and extends repayment period

Agricultural workers (Public Law 78; approved July 12, 1951)

Provides for recruitment and importation of agricultural workers from Mexico, under improved regulations, until December 31, 1953

FINANCE AND COMMERCE

Revenue Act of 1951 (Public Law 183; approved October 20, 1951)

Increases individual income taxes on the first \$2,000 of income (after deductions and exemptions) by 11 percent. Over \$2,000, the increased tax liability is 11.75 percent. Gives to heads of households 50 percent of the benefits of income splitting now enjoyed by married persons

Provides a corporate income tax rate of 30 percent (old law—25 percent) on the first \$25,000 of each corporation's income and 52 percent rate on all income in excess of \$25,000 (old law—47 percent).

Puts a ceiling rate of 18 percent for excess profits tax and consolidated return purposes, which means that in no case will more than about 70 percent of a corporation's income be taken in income, consolidated return and excess profits taxes (old law—62 percent).

Reduces from 85 to 83 percent the proportion of the average base period net income which may be taken into account in computing the excess profits credit.

Imposes the regular corporate income tax on certain undistributed profits of farmer's purchasing and marketing cooperatives, mutual savings banks, and State chartered savings and loan associations, and Federal savings and loan associations.

Changes excise taxes in a number of respects. Almost all of the excise-tax revenue under the act is raised from the manufacturer's excises, the new taxes on gambling and the taxes on alcoholic beverages and tobacco. No rate increases are provided in the case of the retail excises, the excises on transportation and communication, or the admission taxes.

Defense Production Act amendments of 1951 (Public Law 96, approved July 31, 1951)

In this measure the Eighty-second Congress extends (to June 30, 1952) and amends the Defense Production Act of 1950, which sets up the basic machinery for the economic mobilization, inflation control, and defense production assistance. Among other things, the new act bans livestock slaughtering quotas, provides for import controls on fats and oils, grants authority for price roll backs and roll forwards, relaxes retail credit controls on automobiles, continues Federal rent control, and sets up an independent Small Defense Plants Administration. Although the President signed the bill into law, he declared that he would have vetoed the act if it had contained only the provisions relating to inflation. He requested immediate repeal of the livestock, import control, and price ceiling provisions, but the first session of the Democrat-controlled Eighty-second Congress failed to take final action on his request.

Renegotiation Act of 1951 (Public Law 9; approved March 23, 1951)

In order to eliminate excess profits on defense production, Public Law 9 provides for renegotiation of defense contracts and subcontracts which exceed a total of \$250,000 for any one contractor within one fiscal year. To administer these proceedings the law also establishes, as an independent agency in the executive branch, a renegotiation board of five members to be appointed by the President, by and with the advice and consent of the Senate.

E bond interest (Public Law 12, approved March 26, 1951)

Authorizes individual owners of series E savings bonds to retain the same after maturity and to receive interest on such maturity values for a further period not to exceed 10 years

Regulations of exports (Public Law 33; approved May 16, 1951)

This legislation continues authority for the regulation of exports until June 30, 1953.

Export-Import Bank (Public Law 158; approved October 3, 1951)

Increases the borrowing and lending authority of the Export-Import Bank by \$1,000,000,000 and extends the life of the bank for five additional years, until June 30, 1958.

Defense contract financing (Public Law 30; approved May 15, 1951)

This act seeks to encourage the financing of defense contracts by banks and other financial institutions by amending the Assignment of Claims Act relating, among other things, to recovery or set-off by the Government against amounts paid to banks as assignees

Aircraft-war risk insurance (Public Law 47; approved June 14, 1951)

Amends the Civil Aeronautics Act of 1938, as amended, to authorize the Secretary of Commerce to provide insurance and reinsurance for civil and other aircraft against loss or damage arising out of war risks.

Copper import taxes (Public Law 38; approved May 22, 1951)

Suspends import taxes on copper until February 15, 1953, or the end of the national emergency

Suspension of duty on metal scrap (Public Law 66, approved June 30, 1951)

To encourage importation of metal scrap necessary to the defense program, this legislation continues to June 30, 1952, the suspension of duties and import taxes on such scrap.

GENERAL GOVERNMENT

Readjustment of postal rates (Public Law 233, approved October 30, 1951)

Provides for doubling the rate on the penny post card, increasing second-class rates 30 percent over a 3-year period, and raising third-class bulk mail minimum rates by 50 percent. The act also establishes a system of staggered holiday period for Federal employees.

Size and weight limitations on parcel post mail (Public Law 199, approved October 24, 1951)

Lowers the weight and size limits on parcel post packages as follows: if mailed to the first two postal zones, not more than 40 pounds and not more than 72 inches in length and girth combined; and if mailed to the third through eighth zones, not more than 20 pounds. Existing limitations were 70 pounds and 100 inches.

Increased compensation of Federal employees (Public Law 201; approved October 24, 1951)

Provides a 10-percent increase in compensation for about 1,100,000 Federal employees, including the legislative and judicial branches of Government. Minimum increase

is set at \$300 and maximum at \$800. This is the first over-all pay raise for Federal employees since November 1949.

Adjusted compensation of postal employees (Public Law 204, approved October 24, 1951)

Makes adjustments in the compensation and grades of postal employees to meet the increased cost of living and to remove certain inequities in salaries resulting from previous flat increases in pay for postal workers. Provides employees in the automatic grades with a flat \$400 for those on an annual basis and 20 cents an hour for those on an hourly basis

HOUSING AND COMMUNITY FACILITIES

Defense Housing and Community Facilities and Services Act of 1951 (Public Law 139, approved September 1, 1951)

In this measure Congress extends certain time limitations on basic authority for defense housing aids, and authorizes \$1,635,000,000 in Federal aid to housing in critical defense areas. In order to insure that private enterprise may do as much of the job of defense housing as possible the law provides for relaxation of credit restrictions and other means of encouraging private housing before resort is had to Government construction and financing. Of the amount authorized \$50,000,000 is for Government-constructed housing, \$60,000,000 for community facilities and services, \$15,000,000 for loans to prefabricated housing builders, \$10,000,000 for land condemnation in isolated areas; and \$1,500,000,000 for FHA mortgage insurance on privately constructed housing

Housing relief in Missouri-Kansas-Oklahoma flood disaster emergency (Public Law 107; approved August 3, 1951)

Permits more liberal mortgage insurance for those building low-cost homes to replace their homes lost in a flood or other major disaster. Maximum mortgage amount is \$7,000, or in high-cost areas \$8,000, and the insurance could equal 100 percent of the value of the property.

INTERNATIONAL AFFAIRS

Troops to Europe (S Res 99, agreed to by Senate April 4, 1951)

Approves the President's designation of General of the Army Dwight D. Eisenhower as Supreme Allied Commander, Europe; and the President's plans to send four additional divisions of ground forces to Western Europe; but declares it to be the sense of the Senate that no ground troops in addition to the four divisions should be sent under article 3 of the North Atlantic Treaty without further congressional approval.

The resolution further urged the elimination of treaty restrictions preventing Italy from full participation in the defense of Western Europe and also urged the use of military and other resources of Western Germany and Spain.

Mutual Security Act of 1951 (Public Law 165, approved October 10, 1951)

Congress authorized a \$7,483,400,000 foreign military and economic aid program for foreign countries. Broken down by areas, the provision for military aid is \$5,028,000,000 for Europe, \$396,250,000 for Near East and Africa; \$535,250,000 for Asia and Pacific, and \$38,150,000 for the American Republics. Economic aid provided under the new act is \$1,022,000,000 for Europe, \$160,000,000 for Near East and Africa; \$237,500,000 for Asia and the Pacific (excluding Korea); \$45,000,000 for Korea; and \$21,250,000 for the American Republics.

Funds for military aid would be governed by provisions of the Mutual Defense Assistance Act of 1949. The Defense Department would determine the military needs of beneficiary countries, but the President would apportion the funds. In the case of the economic aid, the act abolishes the Economic Cooperation Administration and transfers its

functions to a new Mutual Security Agency, whose chief would coordinate the military- and economic-aid programs. The State Department would retain control of the point 4 program of technical aid to underdeveloped areas.

Mutual Defense Assistance Control Act of 1951 (Public Law 213; approved October 26, 1951)

Provides for termination of United States military, economic, or financial assistance in certain circumstances where recipient countries export military or strategic goods useful in production of arms, ammunition, and implements of war to Soviet Russia or its satellites. Also provides for termination of such aid in the case of other materials, when the Administrator of the Mutual Security Administration deems necessary. Unlike the Republican Kem amendment which banned aid to countries exporting war-potential goods to Communist countries, operation of this act hinges upon the findings, determinations, and discretion of the Administrator. While the Kem amendment was still the controlling law, the Democrat administration nullified its intent by making blanket exceptions to the prohibitions contained therein.

Terminating the state of war between the United States and Germany (Public Law 181; approved October 19, 1951)

Effective the date of enactment, terminates the technical state of war between the United States and the government of Germany.

Extension of Reciprocal Trade Agreements Act (Public Law 50; approved June 16, 1951)

This measure extends from June 12, 1951, for a further 2-year period, the authority of the President to enter into reciprocal trade agreements. The act further provides for detailed proceedings by the President and the Tariff Commission and for reports to Congress in cases likely to cause or to threaten serious injury to domestic producers.

India Emergency Food Aid Act of 1951 (Public Law 48, approved June 15, 1951)

For the sole purpose of providing food grains to meet the emergency need resulting from the flood and drought conditions in India in 1950, the Congress voted a \$190,000,000 loan to India. Although the Senate had adopted a Republican amendment to require ECA authorities to get part repayment in strategic materials, including monazite sands and manganese, the conferees eliminated the mandatory nature of the Senate amendment. The act further provides that up to \$5,000,000 of the repayment sums be put into a special deposit account for an exchange program of students and technicians from the United States and India.

Admission of aliens (Public Law 14, approved March 28, 1951)

Clarifies regulations concerning admission of certain aliens by distinctions between voluntary and involuntary membership in totalitarian parties. The law was made necessary by the misapplication of the Subversive Activities Control Act of 1950 by immigration and naturalization authorities which resulted in the exclusion of aliens not intended by Congress to be excluded.

Displaced persons (Public Law 60; approved June 28, 1951)

Amends the Displaced Persons Act of 1948 by extending certain provisions to December 31, 1951, and also extending the terminal date for entry of orphans to June 30, 1952.

LABOR

Railroad retirement benefits (Public Law 234; approved October 30, 1951)

Increases benefits under the Railroad Retirement Act, the Railroad Retirement Tax

Act, and the Railroad Unemployment Insurance Act.

NATIONAL DEFENSE

Universal Military Training and Service Act (Public Law 51; approved June 19, 1951)

To increase the strength of the Armed Forces and otherwise provide for the national defense, this act amends the Selective Service Act of 1948 by authorizing the induction into the Armed Forces of men ages 18½ through 26 for 24 months of training, with a limitation on the Armed Forces employed in the Selective Service System set at 5,000,000. Regulations concerning enlistments, deferments, exemptions, and reemployment rights are specified. Establishes a National Security Training Commission which will set up a plan to govern the National Security Training Corps.

Construction at military and naval installations (Public Law 155, approved September 28, 1951)

Authorizes a \$5,800,000,000 construction, equipment, and facilities program in designated Army, Naval, and Air Force areas, including research and laboratory centers, in continental United States and outlying Territories.

Naval vessel construction (Public Law 3; approved March 10, 1951)

Authorizes a Navy ship conversion and construction program aimed to increase and to modernize the Navy, at an estimated cost of \$2,700,000,000. Included is authority for construction of a supersonic carrier similar to the carrier *United States* which had received approval in the Eightieth Congress in 1948, but which the President canceled in 1949 after its construction had been started. The delay increased the estimated cost by several million dollars. The law also prohibits the disposition of naval vessels unless authorized by Congress.

Servicemen's insurance (Public Law 23; approved April 25, 1951)

Congress herein provided for a \$10,000 cost-free life insurance policy for all members of the Armed Forces while they are in service with indemnity payable to immediate family beneficiaries in monthly installments over a 10-year period. The National Service Life Insurance Act of 1940 was amended to provide for a new system of insurance under which servicemen are given a chance to continue Government policies after they are discharged and providing insurance for persons suffering from disabilities.

Construction reserve funds (Public Law 157; approved October 1, 1951)

The effect of this bill is to extend until September 30, 1952, the time within which certain deposits in the construction reserve funds, established under section 511 of the Merchant Marine Act, may be committed for the acquisition of new vessels.

Atomic Energy Act amendments (Public Law 235, approved October 30, 1951)

Allows the Atomic Energy Commission to enter into arrangements involving communication of certain restricted atomic data to other nations.

Air Force organization (Public Law 150; approved September 19, 1951)

To implement the National Security Act of 1947 this measure provides a statutory basis for the internal organization of the Air Force and the Department of the Air Force.

Increase in construction cost authority of experimental submarines (Public Law 176; approved October 16, 1951)

Amends existing authority for construction of experimental submarines by increasing the authorized cost of construction of the two vessels being built under authority

of the act of May 16, 1947, from \$41,000,000 to \$49,000,000.

TRANSPORTATION AND COMMUNICATION

Construction of access roads essential to the national defense (Public Law 177; approved October 16, 1951)

Increases the amount available for the construction of access roads certified as essential to the national defense, but puts a limit of \$45,000,000 on the amount authorized.

Reconstruction of flood-damaged highways and bridges (Public Law 175; approved October 15, 1951)

Increases by \$10,000,000 the amount available as an emergency relief fund for the reconstruction of highways and bridges damaged by floods or other catastrophes.

VETERANS

Veterans' benefits (Public Law 28, approved May 11, 1951)

Provides for medical, hospital, and domiciliary care, burial benefits, and compensation or pension rights for persons serving in the Armed Forces on or after June 27, 1950, on the same basis as veterans of World War II.

Housing privileges for Korean war veterans (Public Law 214; approved October 26, 1951)

Extends to Korean war veterans housing privileges granted to other former servicemen, such as entitlement to loans under the GI bill and preference in obtaining certain housing.

Veterans' vocational rehabilitation training (Public Law 170, approved October 11, 1951)

Provides vocational rehabilitation training for veterans with compensable service-connected disabilities who served on or after June 27, 1950.

National service life insurance (Public Law 104, approved August 2, 1951)

This law authorizes successive renewals for 5-year periods of national service life insurance policies which have not been exchanged or converted to a permanent plan of insurance, on a 5-year level premium plan, at the premium rate for the then attained age and without medical examination, provided the required premiums are tendered prior to expiration of such term.

Pension increase (Public Law 149; became law over the President's veto)

Over the objections of President Truman the Congress enacted this measure to provide \$120 pension to veterans of World Wars needing a full-time attendant because of non-service-connected disabilities.

Automobiles for disabled veterans (Public Law 187, passed over the President's veto, October 20, 1951)

The House and Senate overrode the President's veto of this act which authorizes the Veterans' Administrator to pay up to \$1,800 on cars for veterans of World War II and Korea fighting who lost one or both feet, one or both hands, or their sight in line of duty.

Treble action damages (Public Law 142; approved September 13, 1951)

Establishes liability for treble damages on the part of a seller of property paid for in whole or in part with proceeds of loan guaranteed by the Veterans' Administration under title III of the Servicemen's Readjustment Act when the consideration paid exceeds the reasonable value of the property as determined by a proper appraisal by a VA-designated appraiser.

Purchase of veterans' cooperative housing mortgages (Public Law 243; approved October 30, 1951)

This law authorizes the Federal National Mortgage Association to enter into advance

commitment contracts to purchase not to exceed \$30,000,000 of securities issued to construct certain veterans' cooperative housing, if the commitments relate to mortgages where the Federal Housing Commissioner issued either a commitment to insure or a statement of eligibility prior to June 29, 1951. A limitation of \$3,500,000 is placed on commitments in any one State.

Multiple sclerosis (Public Law 174, approved October 12, 1951)

Amends the Veterans Regulations to provide that multiple sclerosis developing a 10 percent or more degree of disability within 2 years after separation from active service shall be presumed to be service-connected.

Treatment of veterans who develop psychosis (Public Law 239, approved October 30, 1951)

Provides for hospitalization and outpatient treatment of World War II veterans who develop an active psychosis within 2 years from the date of separation from active service.

Nomination of Charles M. LaFollette

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a statement prepared by me for delivery on the floor of the Senate on the nomination of Mr. Charles M. LaFollette to the Subversive Activities Control Board be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows.

STATEMENT BY SENATOR HUMPHREY ON NOMINATION OF CHARLES M. LaFOLLETTE, OCTOBER 20, 1951

I arise to address myself to the nomination of Mr. Charles M. LaFollette as a member of the Subversive Activities Control Board, and in doing so want to point out that as the Senate adjourns today it is leaving his nomination as an important item of unfinished business. Mr. LaFollette's nomination will expire with our adjournment today.

We have heard much this week about the necessity of giving the Senate an opportunity to confirm Presidential appointments. I point out, however, that a number of my colleagues who seem so outraged with the fact that the Senate will not be given an opportunity to vote on Mr. Jessup's nomination are themselves preventing the Senate from acting on Mr. LaFollette's nomination.

Mr. LaFollette was first appointed to the Subversive Activities Control Board on October 23, 1950. His nomination was sent to the Senate on November 27, 1950, and resubmitted to the Eighty-second Congress on February 12, 1951. His nomination has been held up for more than 8 months without any hearings, reports, or any other official information from the committee. I am informed that a number of outstanding members of the bar and judiciary of Mr. LaFollette's home State of Indiana, and in the Nation as a whole, have urged his confirmation and I know of no recorded objections to his confirmation.

Mr. LaFollette is an outstanding American who served in the United States Army in Europe during World War I, and has been active in the American Legion in his State for many years. A distinguished lawyer, he

has served as a Republican member of his State legislature, and from 1942 to 1947 was a Republican Member of the House of Representatives from the eighth district of Indiana. From 1947 to 1949 Mr. LaFollette served his country in Germany, first as the deputy chief of counsel and chief prosecutor of the Nuremberg war crime trials, and then as director of the office of military government in Württemberg-Baden.

I had an opportunity to become personally acquainted with Mr. LaFollette upon his return from Germany when he served as director of Americans for Democratic Action at a time when I had the privilege of acting as national chairman of that organization.

Mr. LaFollette is a relentless foe of communism and has been serving effectively and well, first as a member and then as Acting Chairman of the Subversive Activities Control Board. Mr. LaFollette has been Chairman of the three-man panel of the Board, conducting hearings on whether or not the Communist Party is an action group within the meaning of the McCarran Act. The Communist Party will undoubtedly challenge the legality of that proceeding and I regret the fact that the failure of the Senate to act on Mr. LaFollette's nomination will be both a propaganda triumph and additional legal ammunition for the Communist Party which seeks to discredit the Board as an illegally constructed tribunal.

I must, therefore, rise to express my disappointment and my sharp disagreement with the decision of the committee which prevents the Senate from passing on Mr. LaFollette's nomination.

What Do You Know About Price Controls?

EXTENSION OF REMARKS

OF

HON. RICHARD M. NIXON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. NIXON. Mr. President, I ask unanimous consent to have inserted in the final RECORD an article entitled "What Do You Know About Price Controls?" which appeared in the September 1951 issue of the Safeway News, published at Oakland, Calif.

There being no objection the article was ordered to be printed in the RECORD, as follows:

WHAT DO YOU KNOW ABOUT PRICE CONTROLS?

One cent, in America, isn't a fortune. It's only one one-hundredth of a dollar. That isn't very much coin in anybody's language. But you ask the average housewife about the value of pennies, and if she manages the family's budget, you'll hear her insist that you've got to watch the pennies if you want to bag the dollars.

The fact is, even in a large business such as Safeway, a penny is a mighty important sum of money. The average food retailer's net profit margin seldom runs more than a cent or a cent-and-one-half per dollar of sales. Last year, for example, out of every dollar that Safeway took in on sales, the company made about 1½ cents net profit.

Now consider this: If the average food retailer's net profit were wiped out entirely—less than a couple of cents on a dollar—there would be little benefit to the consumer. The point is: It is not the retailer's profit margin that is responsible for inflation.

Most food retailers are now operating at greatly reduced rates of profit. Safeway, for instance, has been losing hundreds of thousands of dollars per week because the un-

reasonable method of imposing price controls is endangering the normal profit margin. In other words, under the patriotic premise of fighting inflation, OPS regulations are strangling the economic life of many a business.

Because the trend in price controls can lead to grave situations, Safeway has taken a leading part in protesting injustices. The situation can best be spotlighted by referring to the company's semiannual report, issued to stockholders on September 6, 1951. This interim report covered the first 24 weeks of this year. It showed sales were up—\$645,902,975 as compared with \$537,993,295 in 1950. But, for that 24-week period, after adjusting for 1951 Federal income taxes, Safeway's net earnings were \$4,337,874—which was \$1,389,858 less than in 1950. This in spite of every means accomplished to tighten to the bone on operating expenses.

"The decrease in net earnings shown for the 1951 period," Safeway's president, Langan A. Warren, stated, "can be largely attributed to the imposition of price ceilings early in the year. . . . These ceilings disregard historical margins, methods, and practices, and fail to protect the retailer against price increases from his suppliers and increased wage and other operating costs."

Safeway, needless to say, is against rising food costs, and against inflation. This company's success through the years has been largely due to its constant aim to bring good quality foods to consumers at the lowest possible cost. But there is a growing tendency, among some sources in this country, to heap such labels as "self-interest" or plain "un-American" upon any firm that stands up to protest some of the decisions of the Office of Price Stabilization.

Almost all price-control regulations established by OPS impose severe profit-margin squeezes on food retailers. The trouble, at least a principal cause of the difficulty, lies in attempting to set ceilings on the 2,000 to 3,000 items sold in the average grocery store. Any attempt to set up uniform prices throughout the country, or even throughout very large regions, is ill-advised. Customarily, margins on different food items vary greatly from area to area. Cuts of meat popular in New York City, for example, may sell at discounts in Los Angeles. Prices charged in a town accessible by rail and truck are apt to be much lower than prices in another town in the mountains reached only by truck.

The point is, as mentioned above, if the ceiling on retail food items is set a cent or two too low, this cent or two is the difference between a normal profit and a substantial loss for the retailer. As an illustration: the average selling price of food items is around 30 cents. Where 30 cents may represent a normal profit of 1 percent on a dollar of sales, 29 cents would represent a loss of 2 percent per dollar of sales, and 28 cents would mean a loss to a retailer of 5 percent per dollar of sales. In other words, for a firm doing an annual business running over a billion dollars per year, as is true of Safeway, the fixing of all prices 1 cent per item too low, means a reduction in net profit of about \$30,000,000. Sounds fantastic, doesn't it?

If you are a retailer who is hurt by certain price ceilings, it isn't much consolation to be told that for the country as a whole the ceilings are fair. The ceilings may be completely unfair as far as you are concerned. Yet because the theory of price controls is aimed at checking inflation and stabilizing the Nation's economic condition, and is accompanied by patriotic slogans, one may hesitate to criticize the set-up. A favorite of price control advocates, and seriously believed by some, is the ill-considered premise that there will be substantial benefit to consumers if profit margins of retailers are reduced. This latter is political thinking. Congress never intended the power given to the President over prices be used for profit

control purposes. These are but a few of the facts that must be acknowledged if one is to know the full story about price regulations.

Price controls have created many problems in the distribution of food supplies. Retailers with the lowest ceilings have had the hardest time obtaining short items. Shortages have shown up particularly in meats. Many types of meat are short in different parts of the country. The summer shortage of lambs in the East, the current shortage of carcass beef in the Midwest, are two examples resulting from unreasonable ceiling prices. Where's the meat going—there's plenty in evidence on the hoof—if it isn't reaching these retailers? No FBI training is needed to trace the tons of meat rolling into gray or black markets. Something should be done, obviously, to revert the course of meat products from illegal channels back into legitimate supply lanes.

Thus much of the solution to this grave problem of price ceilings appears to be in the matter of supplies. At least this has proved traditionally true in the retail food business. As long as there are no critical shortages of any food items, competition between retail grocers is keen enough to keep prices in line. Anyone who has had the experience of trying to run a grocery store knows just how long you can survive in this business if your prices are not competitive?

Actually, and the facts are on record: If devotees of price controls are hoping to curb inflation by cutting into profits, they're wasting valuable time in this intensely competitive game of food retailing, where the margin of profit is measured in terms of a penny or two of every sales dollar.

Drug Addiction

EXTENSION OF REMARKS OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. FURCOLO. Mr. Speaker, under general leave granted to extend remarks, I hereby include the following editorial from a recent edition of the Springfield (Mass.) Union:

DRUG ADDICTION

Penal punishment, including the death penalty, is increasingly advocated as a deterrent to illicit narcotic traffic.

Why are we so quick to call for the blunt clubs of imprisonment and electrocution rather than sociological reasoning? Surely we can use better weapons than the instruments of brute force.

An examination of the traffic manifests the immense falsity of the penal approach. Why are there sellers of illicit narcotics? This question must rightfully be divided; why are there the "higher-up peddlers," and why the "bottom-pushers"? The "higher-up" is there for the fantastic profits. As for the pusher, the answer is more complex.

The existence of the pusher points to one of the most tragic and least understood aspects of narcotic addiction. The opiate addict becomes physically dependent on the drug; unless his body receives as great a dosage as the preceding one, an agonizing physical abstinence "syndrome" sets in.

Contrary to opinion, it is not a mental craving, but only this terrible physical necessity that motivates the petty crimes of the opiate addict. Included in these crimes is the pushing or selling of narcotics on the

bottom level, i. e., directly to his own fellow sufferer.

Thus we have the peddler who reaps the fantastic profits, and the pusher who sells to procure his own physically needed supply. Contrary to opinion, it is invariably the sick, desperate addict pusher who bears the brunt of penal punishment; within the shrewd framework of narcotics distribution the non-addict peddler is rarely caught.

As for the pusher, the city of New York and other affected large cities are pioneering and breaking into this tragic and yet vicious cycle, though with less than satisfactory results thus far. As for the peddler, we have not reasonably answered the fantastic profit incentive that essentially creates him; we must take the profits out of illegal narcotics.

England (since 1926), Denmark, Norway and Sweden are countries which have taken the profits out of illegal narcotics, which treat the addict as ill, and keep addiction amazingly low. England reports less than 400 citizens who are addicts in the entire country. Forty thousand for our country is considered a control figure, with addiction out of control today with some 40,000 in New York City alone.

Why can't we do as well as England? No reason at all. Recognized as a physical and mentally ill person, the addict is administered his drug by an accredited clinic and at the same time offered every facility for healing. This sociological approach eliminates the profits; no profits, no peddlers, no peddlers, no need for penal punishment.

Narcotics addiction is an unnatural, artificial conjuration out of the ignorance of our society, not with brute force, but with knowledge, intelligence, and compassion will we eliminate it, while in the meantime ferreting out and cracking down on the higher-up peddlers.

More Government Waste

EXTENSION OF REMARKS OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SAYLOR. Mr. Speaker, with expenses mounting daily there can be no justification for the Forest Service of the United States Department of Agriculture throwing away money.

On bid invitation 312 from the United States Department of Agriculture for the Forest Service, northern region, for a portable rock drill, the Syntron Co., of Homer City, Pa., submitted a bid of \$400. With no explanation whatsoever the United States Department of Agriculture accepted a bid of \$545. While the amount is small indeed, the principal is large and shows bureaucratic indifference to careful expenditures to the taxpayers' money.

I include a letter from the Syntron Co., a copy of their bid, and the letter showing the bid accepted by the United States Department of Agriculture, Forest Service:

SYNTRON Co.,

Homer City, Pa., October 10, 1951

Hon. JOHN P. SAYLOR,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR JOHN: We have many classic examples daily of the waste in our Government

through carelessness in purchasing and plain graft.

Of course we all have the habit of shrugging our shoulders and saying "What can we do?" One small organization can do little or nothing but pay the exorbitant taxes and hope that some day the men who are responsible for the wasteful inefficiency will be brought to task and sensible men placed at the head of our Government who will demand 100 cents in value for the dollar expended.

We are attaching photostatic copy of another classic example of inefficiency and waste.

Why any department of our Government should throw away \$145 is more than we can understand.

If the machines differed from one another greatly the purchasing agent would have a reason for paying the higher price.

Of course the Warsop was the first machine designed. It was designed and manufactured in England. Whether or not it is manufactured in the United States at the present time I cannot say, but it is an English machine in every respect, while the Syntron machine is 100 percent an American machine that is designed on the same principle by American engineers who have improved the machine, increasing the weight and the power.

Of course we may be prejudiced in our belief that the Syntron machine is much better but we are sure that there isn't \$145 more value in the Warsop machine. Of course in the next year the various departments of the Government will probably buy several hundred similar machines and \$145 lost on each machine will be enough to consider even in these days of easy Government morals and dollars.

Of course the Government loss will only be 36 1/4 percent of the value of the machine quoted at \$400.

We know that you and a large percentage of our Pennsylvania Representatives are fighting this type of carelessness as hard as you can.

We don't like to take up your time or add to your burden but pass this along to be added to that growing pile of proof of the carelessness and waste that is making it harder for our country.

Kindest personal regards,

Sincerely yours,

CHETWIN M. HURD.

(Copy to Hon. JAMES E. VAN ZANDT, House of Representatives, House Office Building, Washington, D. C.)

Schedule

[Bid No 312- Continued]

Item No	Article	Quantity	Unit	Unit Price	Amount
A	Drill, rock, portable, gasoline-engine driven, complete, and in accordance with the following specifications: F. O. B. Hamilton, Mont.	1	Each..	\$100	\$400

Bidder please state the make—Syntron—and model—RD-51—of the rock drill you propose to furnish under item A.

Descriptive literature covering specifications and a detailed cut or drawing of the unit you propose to furnish must accompany your bid.

SPECIFICATIONS AND GENERAL CONDITIONS

It is in the intent of this invitation to secure a light weight portable gasoline-driven rock drill for use on trail maintenance in remote areas.

Drill furnished shall be the manufacturers' latest model.

The unit desired shall be similar and equal to the latest model of Warsop rock

drill as manufactured by Warsop Power Tools, Inc., of Philadelphia, Pa., having the following specifications:

Engine: Two-cycle gasoline.
Fuel: Gasoline-oil mixture.
Tank capacity: One-half gallon.
Ignition: Flywheel magneto and spark plug.

Speed regulation: Twist grip handle bar throttle control.

Drill speed: Approximately 2 minutes per foot in granite.

Capacity: 8 to 10 foot depth.

Engine speed: Controlled by automatic governor

Starting: Simple freewheel crank.

Weight: Approximately 80 pounds to 118 pounds.

Height: 2 to 10 inches to 37 inches

Drill size: $\frac{3}{8}$ - by $3\frac{1}{4}$ -inch hexagon—1 inch by $4\frac{1}{4}$ inches.

Lubrication: Automatic, using gasoline-oil mixture

Gasoline: Standard

Bidders should carefully read the specifications incorporated in this invitation to determine exactly what is wanted. If the specifications or general conditions are not clear, please contact promptly the issuing office for interpretation or further explanation.

UNITED STATES

DEPARTMENT OF AGRICULTURE,

FOREST SERVICE,

NORTHERN REGION,

Missoula, Mont., October 2, 1951

SYNTRON CO

Homer City, Pa.

GENTLEMEN: Reference is made to your letter of September 28, 1951, with regard to our bid invitation 312 for a portable rock drill.

The successful bidder meeting our specifications on this invitation was the Andrews Equipment Service, Inc., at a bid price of \$545 less 1 percent, 20 days.

Thank you for your quotation and your letter of inquiry.

Very truly yours,

L. E. NOEL,
Regional Supply Officer.

Acting

United States Foreign Policy Fails in Middle East

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SMITH of Wisconsin. Mr. Speaker, the British-Egyptian controversy is further evidence that a change in foreign policy all over the world is badly needed. Mr. John C. Henry correctly sets forth the situation that prevails in the Middle East in an article that recently appeared in the Washington Evening Star. Our own national security is involved and the American people should be fully informed of the present dangers in that part of the world. The United States has no business pulling British chestnuts out of the fire in Egypt. However with Mr. Acheson as Secretary of State we can hardly expect less. I am

including Mr. Henry's article as part of my remarks:

NEW SANDSTORM OVER SUEZ CANAL—ANGLO-EGYPTIAN CONTROVERSY ONLY ONE OF SEVERAL ISSUES CAUSING STEADY DETERIORATION OF WESTERN POSITION IN THE MIDDLE EAST

(By John C. Henry)

Another sandstorm is really beginning to swirl in the Middle East—this time over the narrow waters of the Suez Canal.

In many respects there are close parallels between the Anglo-Egyptian controversy, involving both the Suez and the Sudan, and the several other issues which have been causing a steady deterioration of western position in a vital part of the world. Through more than a century of its history as a great world power the British Empire recognized the importance of the Middle East, and particularly of Egypt and the Suez area, as a link in its command chain around the globe. Through most of those years Britain had both prestige and power to support its policies—and even though these were not uniformly popular influences between the two World Wars they were adequate to maintain political, military, and economic dominance in the critical zones. World War II and the succeeding years have brought some changes.

Quite understandably, Egypt has been the proudest of the Middle East countries. Out of an ancient history that had its form of genuine glory the country has made substantial progress in modernizing its economy and its politics. It considers itself the leader among the Middle East nations and it is correspondingly sensitive in its relationship with foreign powers. When British tanks were driven to the very doors of King Farouk's palace early in World War II to force him to accept a government more amenable to British discipline a malignant wound that has not yet healed was inflicted upon Egyptian pride. Whether or not there was an alternative means of gaining the desired cooperation at the time is an academic question today.

While Farouk was quoted then as warning the British that they would some day regret their action it would be an oversimplification to trace all of today's troubles, either British or western, to this single incident. The overall colonial policies of both the British and the French had been effectively creating a reservoir of ill will toward European domination in the Middle East. Neither power showed a willingness to recognize the local urgings for independence and equality which are part of true sovereignty, preferring too often to speak of nationalism and xenophobia as if they were diseases which could be safely disregarded or perhaps treated by the nineteenth century prescription of a whiff of grapeshot.

In this background the United States has likewise failed to exercise a constructive influence. When the Palestine issue came to a head in the postwar years it was American policy for the most part that was imposed upon western behavior and the result was creation of a new antagonism and disillusionment of the Arab nations toward the West. On most other issues we chose to let the British exercise first responsibility.

Actually, aside from the purely military significance of the Suez defense, there is a broad ground of common interest between the west and the middle-eastern powers. Communism does not come naturally to the Moslems, despite the social unrest which fastens itself so easily upon areas of low-living standards. There are bonds of commerce and of culture between the non-Communist world and the Moslem world, stronger as they apply to Britain than to any other country of the western bloc.

The Egyptians are well aware, from history, that they cannot stand aside in any

world conflict. If such a conflict develops, or, more appropriately, if it is to change from the cold to the hot stage, it is unlikely that they would make a free choice to join with the Communist cause. For months past they have awaited invitation to join with the North Atlantic powers in some form of regional security pact and the present Four Power—American, British, French, and Turkish—deliberations at Ankara are expected to develop a framework for such participation.

While Wednesday's proposal of the Nahas government for abrogation of the Anglo-Egyptian Treaty may seem badly timed and ominous to the West, it makes even more compelling the urgency for a negotiated settlement of this issue—as against a recourse to force—and the construction of a new formula of partnership which could strengthen rather than destroy the fabric of security.

"In the Darkness Before Dawn Almost Any Morning You May Hear the Roar of a B-50's 14,000 Horsepower as It Strains To Get Off the Ground With a Load of Live Practice Bombs"—Howard Norton, London Correspondent, Baltimore Morning Sun

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, I well remember how much I was impressed by a short address to this House made by VICTOR L. ANFUSO, in which he declared:

It was indeed heartening to read just how effectively our Air Force is on the forefront of the fighting lines throughout the world, readied as far as is possible for every emergency, not alone here at home, but abroad as well.

Pilots, navigators, bombardiers, air and ground crews are drilled relentlessly in their jobs.

In writing of these matters, Benjamin Welles, special London correspondent of the New York Times declared "In case of war, the United States air fleets could be in action in a mere matter of hours."

Mr. Speaker, that is what was spoken with respect to the readiness of the United States Air Force on May 10 last. In discussing the same subject to which Congressman ANFUSO addressed himself, Mr. Howard Norton, chief of the London bureau of the Baltimore Morning Sun, in writing of the United States Air Forces now in England, declared:

Here in England are the bases and the B-50 bombers are the planes that would start delivering death and destruction to the enemy within minutes if war comes.

Every Member of this House and Americans everywhere will thrill at the good news telegraphed from London with respect to the accomplishments and exploits of our B-50's: 15,000 to 30,000 feet in the skies on flights that take them the equivalent of nearly two round trips

to Moscow from their English bases, or even further.

Mr. Speaker, in order that Members of both Houses may have an opportunity of learning of how our own country here at home is defended by our Air Forces flying the sky over England, I ask unanimous consent to extend my remarks and include therein the article written by Howard Norton of the London bureau of the Baltimore Morning Sun, entitled "GI Bombers and Their Flying Gas Stations."

That article reads as follows:

NEW RAMPARTS WE WATCH—GI BOMBERS AND THEIR FLYING GAS STATIONS

(This is the second of a series on American air bases in England. The series was completed before Mr. Norton began his present coverage of the British election campaign.)

(By Howard Norton)

LONDON—When you pass through the gates of any of the five big American bomber bases in England, you're in the war zone.

These are the bases—and the B-50 bombers here are the planes that would start delivering death and destruction to the enemy within minutes if war came.

Officially, the 45 to 50 big silver bombers and their crews that are in England now are here for 3 months of training under the strategic air command rotation program.

Actually, it amounts to 3-months' duty in America's first line of defense.

UNDER TIGHT SECURITY BLANKET

A tight security blanket covers all their movements.

Guns of the Thirty-second Antiaircraft Brigade—manned 24 hours a day—guard each of the fields.

A tight-lipped, unsmiling American security guard, with a rifle slung across his shoulder, stops you 50 feet away from any of the airplanes.

Even the commanding general has got to halt and dig out his identity card, and let the sentry read it over and compare the picture with the general's face. Otherwise, he gets no closer to the bomber.

In the darkness before dawn almost any morning you may hear the roar of a B-50's 14,000-horsepower as it strains to get off the ground with a load of live practice bombs.

When it returns—anything from 17 to 23 hours later—its bomb bays are empty, and its crew heavy-eyed with fatigue.

In the intervening hours, these American boys have fought simulated midair battles with camera guns, dueling with the best fighter pilots the Royal Air Force and the American bases can send up.

They have dropped thousands of pounds of explosives on Helgoland or possibly on targets in the marshy region of East Anglia known as the Wash.

REFUELING HIGH IN THE SKY

They have pinpointed by radar vital factories deep in the heart of one or more English cities, and theoretically destroyed them.

They have made rendezvous with other B-50's to practice formation radar attacks and formation gunnery.

They have made a solo attack on at least one strange target.

They have worked out a problem in celestial navigation.

And somewhere—15,000 to 30,000 feet in the sky—they have met a lumbering B-29 tanker plane and taken aboard possibly as much as 4,000 gallons of gasoline in a matter of minutes.

While all this is going on, they may have flown 5,000 miles—the equivalent of nearly

two round trips to Moscow from their English bases—or even farther.

It is all a deadly serious business.

But at the same time, to the crewmen, it is also something of a game.

The Strategic Air Command scores and rates its bomber wings according to their efficiency, like the teams of a baseball league.

And each wing, in turn, scores and rates its bomber crews.

At the end of each month the scores are totaled up, and the leading crews get temporary spot promotions—which mean more pay and privileges. They keep their promotions as long as they keep their proficiency.

ARRIVES STRIPPED FOR BATTLE

When a wing (45 to 50) of B-50 bombers flies to England for temporary duty it comes over stripped for battle.

All the supporting personnel—clerks, cooks, and the like—are left behind. And in their place it brings all the spare parts and equipment it would need if it had to keep going 90 days with no further contact with rear bases of supply.

All this is packed into what the Air Force calls a fly-away kit—a big aluminum container built to hold the exact number of spares which experience has shown the average B-50 will need in a 90-day period.

One kit goes into each plane. So all the crews need when they get here are a place to live and eat, runways to fly from, and shops where the maintenance work can be done.

THAT'S GENERAL JOHNSON'S JOB

To provide these and keep them running is the mission of Maj. Gen. Leon W. Johnson's Third Air Force in England.

And well over half the more than 20,000 Americans in uniform in England today are building or maintaining such bases under Johnson's command.

During their 3 months at these bases, the bomber crews live together under wartime conditions.

There is no more driving home to dinner with the family as they do at their American bases. They get to know each other intimately. Misfits are spotted and weeded out, for the sake of the team.

ENGLISH PEOPLE AND WEATHER

They get to know the English people and—more important to them—the English weather, and the kind of clothing and navigation it takes to beat it.

Mostly, they live in prefabricated huts or Nissen huts built during the war. These are all right in the summer, but can be pretty damp and miserable in wintertime.

At this moment, the United States Air Force is operating five of these bomber fields in England. All are former RAF fields made over to suit the needs of the B-50's. And all are in East Anglia.

Three of the five are being used by the rotating wings of B-50's; the fields at Bassingbourn, in Cambridgeshire; Wyton, in Huntingdonshire, and Mildenhall, in Suffolk.

FIFTEEN TO TWENTY AT EACH BASE NOW

Fifteen to twenty bombers are now stationed at each of these, though, in emergency, the bases could handle many more.

One of the biggest of the fields—Sculthorpe, in Norfolk—is being used by a squadron of RB-45 four-jet reconnaissance planes.

And the fifth, and biggest, of the group—Lakenheath, in Suffolk—was given over last month to the Second Air Refueling Squadron, a group of 20 stripped-down B-29's technically known as KB-29P tankers.

That this tanker fleet gets the biggest and best of the bases now operating reflects the importance the Air Force attaches to this relatively new type of aircraft.

Midair refueling gets top priority among training items in England.

The KB-29P looks like a flying scorpion.

An 18-foot boom juts out from its tail like a scorpion's stinger. But there is no sting left in the tanker planes. They have no guns at all, and every other weighty gadget that can be spared has been removed.

In the bomb bays, instead of bombs, are bulging nylon gasoline tanks, capable of carrying more gasoline than the Air Force would like to have published.

One of these strange-looking planes recently flew for 18 hours and still was able to transfer 2,000 gallons of gasoline to another plane somewhere along the route and keep a safe margin in its own tanks.

STAMINA OF MEN ONLY LIMIT

It is routine for them to fly 5 hours, then transfer up to 6,000 gallons, and turn around and fly 5 hours back to base.

Flying as long-distance reconnaissance planes they can stay in the air without refueling for 35 to 37 hours, or even longer depending upon their speed.

"With these flying gas stations to help us, the only limit on the distance a bomber can fly now is the stamina of the men," said one B-50 skipper.

"It's the biggest thing that's happened since the development of jet power."

MEN FROM MARYLAND THERE

Men from Maryland are scattered over every base that the Air Force has in England.

At Lakenheath, helping to keep the vital tanker fleet flying, is Corp Emory Earl Frantum, son of Mrs. Laura C. Frantum, of Annapolis.

Frantum is a reciprocating engine mechanic, and is a member of what the Air Force calls the permanent party—the group of 1,500 to 2,000 Third Air Force men who here for periods of 2 to 3 years to keep the bases running.

Lakenheath's public-information office is being run by another Marylander—Staff Sgt. John F. Shilling, of 504 Braun Avenue, Hagerstown.

Sergeant Shilling arrived in June for a 3-year tour of duty.

Pfc Samuel E. Galloway, 19, son of Mr. and Mrs. Samuel Galloway, of Arnold, Md., has been serving in the air police on Lakenheath base for 10 months.

A former Navy man, Galloway is now thoroughly sold on the Air Force—mainly, he says, because he gets a chance to indulge in his favorite pastime, football.

Serving with him on the Lakenheath air police force is Pfc Melvin D. Howard, 23, of Annapolis.

At Bassingbourn bomber base is Sgt. Donald C. Myers, son of Mr. and Mrs. William Henry Myers, of 31 South Franklinton Road, Baltimore.

MYERS HAS ENGLISH WIFE

An Air Force automotive supply specialist, Myers married an English girl—Rosina Pozzo, of Richmond, Surrey—after he arrived here in April 1949.

And in August their first child was born, a daughter, Shirlen.

"It's O. K. living over here when you don't have to eat off the British food ration," says Myers. "But I think my wife will be pretty happy to go to the States. You can tell the folks I may be bringing the family home next March."

Myers and his wife—like all American service people in England—have the privilege of buying their groceries and meats at the Air Force commissary at the base.

They live in an English house in Royston, a town near the base.

SHE DOESN'T NOTICE THE COLD

"You can take it from me," says Myers, "these English houses just aren't made to take any heat in the winter. But that's the nice part about having an English wife. She doesn't notice it."

Also at Bassingbourn is Pfc Robert V. Stockett, 21, an air policeman and son of Mrs. Helen Stockett, of Davisonville, Md.

At Wyton bomber base is Pfc Harry Gray, 20, son of Mr. and Mrs. Joseph S. Gray, of 4211 Thirty-fourth Street, Mount Rainier, Md.

Assigned as security guard to watch the B-50's at night, Gray has to spend most of his daylight hours "in the sack."

"It sure cuts into my social life," he comments.

One of the stars of the track team at Wyton is Pfc David Jackson, 19, of 515 Fourth Street, East Annapolis. He is the son of Mr. and Mrs. James Jackson of that address.

JACKSON TAKES UP CRICKET

Jackson won the 880-yard run in the base track meet, but when the American team came up against the Peterborough Athletic Club "the best I could do was fourth," he says.

Jackson has taken up cricket since he came to England last November, and he now holds down a spot as fielder on the base team.

"We get licked every time we play," he grins. "But that's all right, because every time the English get up a softball team, we lick the hell out of them."

Air Mail Subsidy Separation**EXTENSION OF REMARKS**

OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CROSSER. Mr. Speaker, last January 1951 President Truman repeated his recommendation that the hidden airline subsidies be separated from so-called mail pay:

In addition to the nearly \$200,000,000 that will be spent in 1952 for aviation facilities and services, the Government will spend a substantial amount in subsidies to the airlines through mail payments. Federal financial assistance has been a major factor in the industry's rapid growth, and should be continued to the extent necessary for the sound development of civil aviation. The method of paying this subsidy should be changed, however, in order to provide the public with full information as to its cost. At present, the airline subsidy is merged with compensation for the cost of handling mail and included in postal expenditures. These two elements should be separated, and the subsidy portion paid by the Civil Aeronautics Board from funds appropriated specifically for that purpose. I again urge the Congress to enact legislation providing for this separation. (Extract from message of the President to the Congress transmitting United States budget for fiscal year 1952, January 15, 1951.)

Last year the Committee on Interstate and Foreign Commerce, of which I have the honor to be chairman, reported out a very effective bill to separate subsidies from air-mail pay.

I urge Members of the House to read the 15-page report which accompanied the bill, House Report 3041, of the Eighty-first Congress, second session. That report will present a sound analysis of the issues involved.

Our committee bill, with amendments, passed the House unanimously but because the Senate did not act on it, prior to the expiration of the Eighty-first Congress, the House must now act again.

It is my hope that the members of the Committee on Interstate and Foreign Commerce will stand by the sound principles in last year's committee report, and report favorably again the same strong bill which was reported last year.

I do not believe that the amended Senate version meets the standards in President Truman's recommendation. Nor does it meet the standards set forth in the recommendations of the bipartisan Hoover Commission, of the A. F. of L. and CIO, of the taxpayer, veterans, and other public-spirited groups who have frequently advocated this reform before our committee.

This point is elaborated in an editorial, October 14, 1951, by the Baltimore Sun which I ask leave to insert in the Record at this point.

Therefore I hope that our committee will repeat its action of last year, and report favorably H. R. 508 or H. R. 190, and that the House will approve a really effective separation bill.

We would thus be adding something of almost monumental value to the statute books.

The editorial follows:

AN UNSATISFACTORY AIRLINE SUBSIDY BILL

The intent of Senate bill 436 recently passed by the Senate on voice vote was to separate airline subsidy from pay for carrying the mails in both the domestic and the international field. With mail pay and subsidy doled out at present in one conglomerate sum by the Post Office Department it is impossible for the taxpayer to discover just how his airmail dollar is divided.

The bill passed by the Senate provides that domestic subsidies be determined separately from mail pay and that they be paid separately by the Civil Aeronautics Board. The bill sets a scale of rates for domestic airmail payments to take effect next July and authorizes the CAB in future to adjust rates and standards of compensation without additional legislation. Though these standards are somewhat clouded by national defense considerations the bill does state that the mere existence of an airline certificate "shall not be deemed conclusive" justification for subsidy.

From the beginning this bill has been weak on the international side. It is worse as amended. The cost factor which serves as a guide in the fixing of domestic rates is completely ignored. The floor set is the amount paid to foreign carriers for handling the mail and the ceiling provided is the Universal Postal Union rate of \$2.86 per ton mile. This, as we have pointed out before, is over three times the rate for a luxury passenger and seven times the rate for airfreight and express.

Amendments to the bill would permit the international carriers to obtain Federal subsidy contracts for periods up to 5 years, with the carrier to return to the Government at the end of the contract one-half of any net profit for the operation in excess of 10 per-

cent of invested capital minus liberal deductions. Subsidies would be restricted to United States air lines holding certificates as mail carriers.

These amendments by Senators McMAHON and McCARRAN are the jokers in this Senate bill. Five-year contracts would dodge yearly congressional review of subsidies even though the Hoover Commission called for it. "Losses and subsidies [said the report] should be made clear each fiscal year and passed upon by Congress."

Also under these amendments the CAB could conceivably grant any number of certificated carriers, 5-year subsidy contracts. And Congress would be obligated, making the lack of annual review a most serious out in the Senate bill.

Last year the House passed a much tighter measure to achieve separation. That was the Heselton-Kennedy bill which died in the Eighty-first Congress. To properly implement the separation idea the House Interstate Commerce Committee should now adopt last year's hearings and report favorably the same Heselton-Kennedy bill (H. R. 508) which they approved last year.

Address by Hon. Dewey Short, of Missouri, at Luncheon Meeting of Kiwanis Club of New York

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by me to the Kiwanis Club of New York on Wednesday, October 3, 1951:

(The president, Dr. Arnold Treitman, introduced Mr. George E. Stringfellow.) [Applause.]

Mr. STRINGFELLOW. Save your applause for the speaker. I am sure he will be worthy of it.

Our speaker today has been a Member of Congress from Missouri for almost a quarter of a century. He was educated at Boston University, Harvard University, Heidelberg University, and Oxford University. I think he comes to us with a good educational background. [Laughter.] Of course, the feeling is not unanimous on Harvard. [Laughter.] I want to say to you that he is a roaring Lion. He is a member of the Lions Club and a very good member he is.

DEWEY SHORT has carried his district in Missouri when the State has voted overwhelmingly for the opposing party. For years he was the only Republican member of the Missouri delegation. People vote not so much for the Republican Party out there or the Democratic Party, but they vote for the things that DEWEY SHORT stands for, and it is the things that DEWEY SHORT stands for that made America great. If we stand with him, we will help him keep America great, and that is our responsibility, your responsibility, and my responsibility.

DEWEY SHORT.

[The audience arose and applauded.]

Congressman SHORT. My good friend, Mr. Stringfellow, Mr. President, and members of the Kiwanis Club of New York City, it is a real pleasure and a high honor to be invited to address your splendid organization.

When I was a little boy in the backwoods of the Ozarks in southwest Missouri, I often read about the seven wonders of the world, and during the past three decades, it has been my opportunity and good fortune to have seen first hand many of these wonders of the world, but the longer I live and the more widely I travel and the more I study men and institutions, the more am I convinced that there is only one wonder left in all this world and that is the United States of America. [Applause.]

How much longer we can maintain and support this outstanding wonder of the world remains to be seen, but what is it, I ask you, that has contributed to our supremacy among the sovereign nations of this world? There are other nations much larger than ours in area, in acreage, geographically speaking much vaster, richer than we are in mineral deposits, in agricultural output, and in forest reserves. They outnumber us as much as three or four to one in population. It is much closer from New York City to Leningrad than from Leningrad to Vladivostok. There are millions of acres in Siberia that have never heard the sound of a woodman's ax. There are rich and extensive mineral deposits all over the U S S R. China, of course, outnumbers us almost three or four to one in population. But neither geography nor mere numbers of people is a correct criterion by which to judge the greatness of a nation or of a people. There is not strength in mere brute force or physical numbers.

What is it then that has made America in less than a century and three-quarters the outstanding Nation of all the world, and what has contributed to our supremacy, not only in a material way with all the physical comforts we enjoy, but with the educational opportunities, the religious freedom and with the hundred-and-one better things of life which we enjoy daily more than any other people?

Well, I think the first thing is our religious basis. The Christian religion has made America great and supreme because the architects of our country, the founding fathers, who wrote the Declaration of Independence, the Constitution of the United States, and the Bill of Rights, were God-fearing men. They started out by saying, "All men are created equal, that they are endowed by their Creator with certain unalienable rights . . ." It was the religious faith of Thomas Jefferson and of George Washington during those harassing and bitter days of the Revolutionary War with a ragtag army, half frozen and starved at Valley Forge. It was George Washington who fell on his knees in the snow imploring the help of divine providence, because he had nowhere else to go. Not only Jefferson and Washington, but Franklin, Madison, and other men who set up a new republic on the face of the earth were God-fearing men.

We have inherited the virtues of the Christian religion, and only those of you who have had the opportunity to visit the dark continent and the savage islands, where cannibalism is practiced and where Christianity is not known, can truly appreciate the faith of our fathers, which contributed so much to the strength of America, because it is in this spiritual strength, in these moral values and ethical ideals that America has been made great and invincible.

During the darkest days of the Civil War, when our country was being torn asunder, Lincoln fell on his knees in the White House. He once said, "Often I have been driven to my knees because I had nowhere else to go. My wisdom and the wisdom of those around me proving insufficient for the day."

The Christian religion is made up of people who believe in the dignity of the human soul, who believe in the worth of individ-

ality, who respect the personality of their neighbors. That is the thing, the fundamental thing above all else that has made America supreme, and our religious, spiritual, social, political, economic, and educational bases are so interwoven and intertwined that it is impossible to discuss one phase of our life without thinking of another.

The second thing that has made America supreme among the nations of the world is our American form of government. Along with this religious foundation, we have a political foundation, a republic, if you please, not a democracy. We have had much loose talk in recent years about democracy, but the men who wrote the Constitution, the bible of freedom and the charter of liberty, were as eager to avoid a democracy as they were a monarchy. They knew that one leads to tyranny and the other ends in anarchy. They set up a constitutional, representative democracy, or republic, and it seems strange, almost unbelievable, that less than two centuries ago, men universally believed in the divine right of kings. It wasn't until Washington, through his military genius, won our independence from the evil of a foreign rule, and our forefathers gathered at old Independence Hall in Philadelphia with young Alexander Hamilton and aged Ben Franklin, the Pinckney boys, Madison, Bell, and the rest of the signers of that immortal document that Washington refused the kingly crown and set up for the first time in the history of the world a government of, by, and for the people. In order to secure these inalienable rights hitherto unheard of, they established a government that derives all its powers from the consent of the governed.

As Washington founded that Union, Lincoln preserved it. They did not concentrate all the political power in the hands of a single individual. They did not want to concentrate all powers of Government in the hands of any group of individuals. Rather, they wanted a dual form of Government—the Federal and the States, and all powers not expressly given in the Constitution to the Federal Government are reserved to States on local level, because as Lincoln said, "As long as you keep government close to the people, it will be safe." But when you get government by remote control, when you get all governmental powers concentrated in a Federal bureaucracy in far-off Washington, when as Thomas Jefferson said, "When the Government tells the farmer when to reap and when to sow, the people will go hungry," then government becomes very, very dangerous.

There is no task too difficult for the American businessman to undertake, no battle too fierce for him to fight as long as he knows the rules of the game. But when you have a set of referees or umpires in Washington, bureaucrats who were never elected by anybody and are not responsible to anyone except the person who appointed them, who change the rules of the game at every inning, then you don't know which goal post is your own and you can't tell second base from home plate.

Our ancestors set up a republic form of government, a government of, by, and for the people. Your Government is not in Washington, D. C. It is here in New York. It is out in Missouri. It is in Oshkosh, Kokomo. It is in every little hamlet. It's in this room today. You are the Government. It is not outside somewhere. It is you, and it is exactly what you make it.

I am sorry to say that in recent years, many intelligent, successful businessmen have given too little consideration to the affairs of government and have taken too little interest in politics. They have gone

fishing on Election Day. Women have given bridge parties, tea parties. I think the citizen who does not take the time and spend the effort to study issues and candidates in an election and who does not exercise the greatest privilege ever given any man—the right of suffrage—and fails to discharge a solemn responsibility and a sacred duty by going to the polls to vote is as dangerous to his Government and as big a slacker as any soldier who deserts his general upon the field of battle. It is wonderful to live for America just as it is wonderful to die for America. And this form of government of ours, resting upon the faith of our fathers, "living still in spite of dungeon, fire, and sword," we will be true to it to death. It is that religious faith. It is this political system of democracy in a Republic where the people themselves are supreme, and you are supreme. You are bigger than the President, bigger than Congress, bigger than the Supreme Court or all three combined. The only power that can change the fundamental law of this land, which is the one guaranty of our liberty, is the power that makes it, namely, the people themselves. Only the people can change the Constitution, although by clandestine, surreptitious methods in recent years there are those who are trying to undermine and destroy the very foundation upon which this Government rests.

Yes, it is the Christian religion, along with our fundamental political philosophy, that keeps the power of the Government in the hands of the people themselves, that have made America great.

The third thing that has made us supreme among the sovereign nations of the world is our underlying fundamental economic philosophy of private enterprise and individual initiative. We have heard a lot about this "awful capitalism" in recent years. Where in the name of God would Russia have been in the Battle of Stalingrad, where would England have been in the Battle of Britain had it not been for the capitalistic system in the United States that furnished the sinews of war, not only to feed, clothe, house, and furnish the supplies and equipment for 12,000,000 men and women in our own Armed Forces on land, sea, and in the air, but furnished the weapons of war to supply and equip our allies? It was America's industrial output, our productive capacity in spite of all our strikes and stoppages of work that won World War II, and I am glad that General Eisenhower, Admiral Nimitz, General Vandegrift, and all the other great military leaders recognize that fact. They wouldn't for one moment detract from the glory and heroism of the men who fought the bloody battles and won the victories on every continent and sea. They know as well as we know it that it was America's industrial might, our productive capacity, built up here in a new country only 175 years old, not nearly as old, not nearly as large, not nearly as populous as other countries, with a much younger civilization, that won World War II. In a century and three-quarters, with our fundamental economic philosophy of individual initiative and private enterprise, we have seen one new industry after another created and we have seen them expand between two vast oceans and from Canada to Mexico. Thank God my father and your father didn't have any Government floor under them to hold them up, and thank God they didn't have any Government ceiling over their heads to hold them down. [Applause.]

That is what has made America great. You destroy the profit motive and you cut the nerve of progress. I know a lot of people who are getting pretty tired of acting as tax collectors for Uncle Sam.

When we set up our political form of Government we had a Government of checks and balances, with a Congress, a Court, and a President, with legislative, judicial and executive powers, and it was the function of one of these branches of Government to criticize and hold in check the other two. In a century and one-half, almost three-quarters, we have grown under this political system of checks and balances to become the greatest Nation on earth, but in recent years we have become a Nation of all checks and no balances. [Applause.]

I know we have got to have certain controls even in time of peace. Government is more or less of a policeman. It regulates. It doesn't produce anything. Uncle Sam hasn't a dime and he never created a dime and he never will. The only place he can get any money is out of your hide and skin. They are taking a lot. We put the needle to you in the last Congress, but, Brother, we are throwing the harpoon into you now. The present tax bill with this tremendous debt hits you in the face, and it is going to hit harder before too long.

Now, these three things: The Christian religion, our American system of government, a republic with a division and balance of powers, along with our fundamental economic philosophy of individual initiative and private enterprise made America great. Those are the religious, political, and economic foundations of this Republic, but each one of them is being challenged today more than ever before in our history.

We fought two world wars in one generation, in three decades. We spent \$34,000,000,000 with a \$26,000,000,000 debt on our backs at the close of the first. We extended loans, gifts, and grants amounting to \$13,000,000,000 to the nations of the Old World and with the exception of Finland, not a dime was repaid, and it never will be.

When the conflict ended, after we suffered 334,000 casualties, we took care not only of our allies, fed and clothed the Belgians and others, we took care of our defeated enemies, namely, the Germans and Austrians. We fought the First World War to make the world safe for democracy. I volunteered with my brothers in arms, as many of you did, to give the "last full measure of devotion," if necessary, to make the world safe for democracy. In spite of all the money and matériel spent, in spite of all the blood that was spilled, we failed to achieve our goal or reach our objective. Instead of making the world safe for democracy, I saw as a student at Heidelberg, Berlin, and Oxford democracy die all over Europe. I saw freedom take wing and fly out the window. I saw the rise of totalitarian states, the establishment of dictatorships—Mussolini with his Fascist Party in Italy, Hitler with his Nazi Party in Germany, and Stalin following the line of Marx and Engels with his Soviet Party in Russia. In spite of all our sacrifices, we did not make the world safe for democracy. We failed.

World War II we have won at an astronomical cost. It is a staggering, incomprehensible sum—\$400,000,000,000, an amount equal to the assessed valuation of this entire Nation. We have got a debt on our backs of \$260,000,000,000. The interest on that debt alone is between five and one-half to six billion dollars. That is as much money as it cost to run this Government before World War II. We have given almost \$100,000,000,000 in loans and grants and gifts to the different countries of the world.

We suffered 1,081,000 casualties in World War II. Three hundred thousand of the finest American young men paid the supreme sacrifice. Seven hundred and fifty thousand boys came back home but are incapacitated. In my post with the Armed Services Com-

mittee, I have visited hospitals and asylums, and I have seen many of these boys with eyes blotted out and arms and legs blown off and the light gone out of their brains. Many are neurotics who will spend the remainder of their lives in hospitals, in psychopathic wards. I have seen war in action, and I have seen the result and the awful backwash of war. The repercussions of war often are as bad as war itself.

We fought World War II to respect the territorial integrities of the little countries, to guarantee to the small people in the small nations the right to determine for themselves in free, open elections without internal pressure or outside influence the kind of government which they themselves want. That is why we fought World War II. We were told so at the time, and yet before the capitulation of Japan, or the surrender of Germany, Russia reached out with her greedy paws and pulled within her orbit one little country after the other—Estonia, Latvia, Lithuania, Bessarabia, Rumania, Poland, East Prussia, Bulgaria, Hungary, Czechoslovakia, Yugoslavia, and Albania—and not content with that, she pointed guns at the heart of Greece, Turkey, and Iran. Only 3 or 4 years ago, when I had the pleasure of addressing the Parliament in Tehran, Russia had 15 divisions mobilized on the Azerbaijan border—the hottest spot in the world today next to Korea. It might well become another. Coming into the Pacific at the eleventh hour, after we had fought and won that conflict almost singlehandedly with help only from Australia to the extent that she could give it, Russia came in 3 or 4 days before the surrender by Hirohito to General MacArthur. What did they pick off? They picked off the northern half, the industrial half of Korea, above the thirty-eighth parallel, all of Manchuria, a territory almost twice as big as the State of Texas, rich in iron and steel deposits and great manufacturing plants at Mukden, Dairen, and Port Arthur. They seized the south half of Sakhalin, all the Kuriles, and practically all of China.

We fought two world wars, one to make the world safe for democracy, which we failed to do, and the other to guarantee the territorial integrities to the little countries and assure the small peoples in the small nations that they could choose the kind of government they wanted, only to see them gobbled up and enslaved.

Now, we are engaged in a deadly conflict, a cold war. There is dynamic divergence in Russia's political philosophy and our own. The ideologies are entirely antithetical and irreconcilable. One philosophy believes in the Christian religion, in the democratic processes of the people ruling themselves and in a free economic competitive enterprise. That is America. The other is a police state. It is the Red philosophy of Soviet Russia that believes in government by force, the OGPU, the Gestapo, a police state where they knock at your door at 2 or 3 o'clock in the morning. For some slight infraction of Stalin's orders, your entire family is shipped off to rot in the mines of Siberia or freeze to death in the cold, frozen north. It is a government with a firing squad, a government where there is no freedom of religion, press, or anything else; in fact it is said, "a religion under the philosophy of Marx and Engel is an opiate to the people." This is the Godless, atheistic communism of Soviet Russia.

I wish I had time to elaborate on some other points. Let me say this in closing. I have tried to point out the three things that they have contributed more than anything else to the greatness of America. I have tried to point out that we fought two world wars and in spite of all our bloodshed and

suffering and sacrifices, we failed to achieve the objective in either one, and now we find ourselves in a sad, sick, war-torn world, bankrupt not only economically and financially, bankrupt politically and, worst of all, morally.

We know, of course, that as long as there are aggressors abroad in the world, we must remain strong on land, sea, and in the air. That is the reason the Congress has not hesitated to vote \$57,000,000,000 for national defense this year, but you and I know we cannot forever carry that load. Russia would not have to fire a shot or lose a man in this cold war unless we change some of our policies. We will knock ourselves out by our own profligacy. We can commit economic suicide here at home, and what Joe Stalin is hoping and wishing for is that we will bleed ourselves white, sap our strength and siphon off our wealth, scatter and dissipate our resources all over the world—Korea today, Indonesia tomorrow, and perhaps Iran next. It is a policy of divide and conquer. Through a systematic campaign of psychological penetration and subversive infiltration, she is hoping for an economic collapse in the United States, widespread unemployment, bankruptcy as a nation, and the deterioration of our currency. All this today is more dangerous, I think, than a dozen Russian divisions. Destroy the purchasing power of the dollar, absorb and confiscate the life savings of the American people, create dissatisfaction, promote unrest, divide and conquer; bleed us white and when that day arrives Russia will come in like a new football team at the end of the third quarter, when we are weary and tired, worn and grubby, and deliver the knockout blow. Abe Lincoln once said, "If this Nation is ever destroyed, it will be not from without, but from within."

You read, I read, contemplate and reflect upon your world history, the rise and fall of empires, and ancient civilizations, from Egypt under the Pharaohs, Babylon under Hammurabi, the Golden Age of Pericles in Greece under Socrates, Plato, and Aristotle; imperial Rome under the mighty Caesar and Augustus down to modern Germany under the Nazis; and you will find that each civilization had the seeds of decay sown from within. It can happen here. I fear it is happening here.

It will happen here unless we have a moral renovation and a spiritual revival and unless we put the proper men in high places in our government in this age of might and materialism, when there is so much crime and corruption and communism abroad in our land, when there is so much bribery, thievery, and fraud in high places of Government. Unless we put our own house in order, unless we make ourselves strong at home, unless we learn to live within our means, unless we stop this continuous deficit-financing year after year, going more deeply and deeply in debt every month, we are headed for trouble. A nation is no different from an individual. I have never been able to spend more than I make without getting into serious difficulty. I don't think any nation can.

Before the war, we had seven and one-half billion of this "lettuce" in circulation. We have over twenty-eight billion, four times as much, now. What will your dollar buy? What will your bonds or life-insurance policies be worth?

This is your country, gentlemen. America is not going to be any better or worse than the people who live in it. Congress isn't any better or any worse than the people who elect its Members. We are simply a mirror in which America is reflected, but if ever we needed to halt long enough to take a little inventory of our present stock, not only of goods and services, but of moral and spiritual values, I think that hour is now.

It is always a pleasure to speak to Kiwanis because you are builders. You are not destroyers. You are builders. We build a great America, if we can only keep it. When Benjamin Franklin walked out of Independence Hall at the end of the signing of the Constitution, one of his friends said, "What kind of government have you given us?" The old man said, "A republic, if you can keep it." "If you can keep it."

We are building two worlds, a material world of physical comforts—the world of finance, of business, of manufacturing; the world of skyscrapers, the giant Diesel locomotives, the fast airplanes. It is a wonderful world with all its physical comforts. Let's keep it up. It is the world of science and engineering that has given us electric and atomic powers; but there is another world, gentlemen, that you as Kiwanians must build, a spiritual world of ethical concepts, of moral principles, and of religious ideals; a world of human brotherhood, of cooperation, of honesty, integrity, and fair dealing. It is a world, if you please, in which we are going to have to live and get along together, because science has annihilated space and conquered time. A short time ago, when coming back from Australia, I stopped at Honolulu and spoke to the chamber of commerce, and the next day I was back at Washington, D. C. Recently coming from Iran, Saudi Arabia, and Egypt, I had breakfast in Bermuda, spent 4 hours and had lunch in my office in Washington, and that same evening I had dinner with my family in south-west Missouri.

So, it is a small world, and whether we like it or not, we are going to have to live together and get along.

But in the fight between these two contradictory philosophies in this cold war, remember not only by material might and physical strength can we ever win a permanent victory, but only by winning the hearts and souls of men. After all an idea is the most powerful weapon in this world. It can be a very dangerous one, if it lodges in the brain of a Hitler or Mussolini or Stalin, but it can be a glorious one when it lands in the brain of a Lincoln or an Edison or a Henry Ford, and only here in this United States with its Christian religion, hope, faith, and love, only here under our political form of Government where man is free to live his own life in his own way, only here under our competitive system of free enterprise would you ever be able to produce a Lincoln who could rise from log cabin to the Capitol. Only here is it possible for a poor mechanic to set up a workshop in a woodshed and put America on wheels and transform our whole system of modern transportation. Only here in America could a poor newsboy sell papers on the train and save dimes and nickels and work through the night, when the sluggard slept, and could invent a gadget that would reproduce the human voice and the incandescent light to light up the world. Only in this United States could you produce an Abe Lincoln, a Henry Ford, or a Thomas Edison.

I love America. I hope we can keep America and preserve the Republic which our fathers gave us.

[The audience arose and applauded.]

President TREITMAN: If anyone would like to direct a question to the Congressman, he will be willing to answer.

Mr. CLARK of Syracuse. I would like to ask our speaker if he considers this movement for universal military training a necessity to obtain the objective he just related.

Congressman SHORT. I have always opposed universal military training or peacetime conscription. I think it is totally foreign to our American traditions. I think

that every nation that has ever tried it has been led down the path to war and defeat, but as a member of the Armed Services Committee, I voted for the extension of the draft. I voted consistently for the huge appropriations for national defense. I shall continue to do so until we can develop an international police force with some strength to carry out decisions of the United Nations. I am certainly strong for adequate preparedness and national defense, but I don't want shouldered upon us in this hour of hysteria a system that I consider totally foreign to all our best traditions and interests. I am opposed to universal military training, and everybody in my district knows that. [Applause.]

Most Pressing and Immediate Steps in Navajo Rehabilitation

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. MURDOCK. Mr. Speaker, I must report that the Navajo and Hopi Indians in northern Arizona and their white friends are somewhat disappointed that the appropriation of funds to carry out their authorization for rehabilitation has fallen below those authorizations. It will be recalled that the authorization was for about \$88,000,000 to cover a 10-year period, which amount prorated would mean nearly \$9,000,000 annually for the purpose. Two annual appropriation bills have since been enacted and in each case the actual appropriation has been considerably less than the average of the authorization. Many of the Indians and many of their white friends do not understand the parliamentary procedure, probably getting the impression at first when the authorization bill was passed that it was an appropriation.

I am pleased to note that in the last supplemental appropriation bill there was an item of \$250,000 for water development on the Navajo Reservation. This was separate and apart from the rehabilitation act. As water is one of the most pressing needs of these Indians it is certainly a timely appropriation. The Arizona Senators, realizing the magnitude of that need and its urgency, attempted to get a larger appropriation and did get a larger appropriation in the other body but it was pared down in conference. We should note in passing that the Navajo tribal council has voted to use \$250,000 of their own funds for this water development. Therefore, the Federal Government in this particular appropriation is matching Indian money dollar for dollar. Perhaps that is as it should be so long as the Indians have tribal funds. They certainly are in a position to know and appreciate their pressing need for water and also how best to obtain it if it is obtainable.

Congressman MORRIS, of Oklahoma, chairman of the Indian Affairs subcom-

mittee of the House Committee on Interior and Insular Affairs, held hearings at Window Rock on March 24 of this year at which the Navajo tribesmen were well represented. The chairman of the tribal council and others presented their needs, the most pressing of which they indicated was water development, both for human consumption and for livestock. Of course, they also indicated a need for water for irrigation but made first mention of wells and water holes for their flocks of sheep and goats. It will be remembered that the authorization bill for rehabilitation contained a large proportion for water developments. The Indians declared at these hearings and have since reaffirmed in petitions that rehabilitation money appropriated should not be spread equally over 10 years but that larger amounts should be appropriated in the early years of the program. They requested this not only for water development but for road construction and gave logical and plausible reasons therefor.

Let no one suppose that the Indians are any the less interested in schools and hospitals because they ask for large initial appropriations for wells and roads because the recent severe drought has made water a vital necessity for them and the remoteness and vast extent of their reservation has made roads and trails almost equally vital to them. During the years that I have been on the Indian Affairs Committee I have noticed that the Navajos have increasingly stressed their need for schooling and medical care in general, but at the present time they are pin-pointing their need on water development. Right now they put that first.

Their reservation is on a high plateau. Water cannot be found just any place a deep well may be drilled. The United States Geological Survey has been called on to make a study and have been conducting a study to indicate where water may be found. Recently 20 new wells have been drilled at depths ranging from 200 to 700 feet and I am happy to say that 19 out of the 20 struck water and are now producing. It would be my guess that instead of 20 wells 200 such wells with windmill equipment ought to be provided at once. I am told by the Indian Service that a few mobile internal-combustion engines are provided, about one for every five or six windmill-pumped wells, to pump the water into tanks when the wind fails to do so.

Decision in Korea Through Air Power

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. PRICE. Mr. Speaker, as a member of the Armed Services Committee of

the House, I have often pondered on the happenings in Korea, and wondered how long it would be before our committee and the American people would come into possession of a true picture of the situation—from the morning of June 25, 1950, down to the present hour.

I have listened with great interest to dozens of expert witnesses—military as well as civilian—who appeared before our committee. I have read innumerable articles and news reports emanating from Korea by way of Tokyo—and long since concluded that, with the exception of our official and military, such expressions—well intentioned—were based upon personal observations locally made by those in Korea who had little or no knowledge of the problem as a whole.

I well remember when the action in Korea first started—that due simply to lack of communications, the news reports received from the war front merely reflected local action noted by those stationed on some local battle sector—and which, when published in the press, became headlines that contradicted one the other in editions issued at the same hour of the very day they were published here in the United States.

It is no wonder the American people were confused as to just what was happening in the first few weeks and months of the conflict in Korea. Frequently I asked myself how long it would be until a clear-cut, concise, impartial, chronological, and factual report would be made as to exactly what was and did transpire.

Mr. Speaker, there has been attributed to some of my colleagues in Congress—from the very inception of the conflict—certain recommendations and statements about tactical air that are directly in opposition to the information and advices given to the Armed Services Committee by some of the most outstanding defense officials as well as military authorities of the Army, the Navy, and the Air Force in these United States.

Is it any wonder, therefore, that I found a great deal of interest in an article provocatively entitled "Air Power in Action—Korea 1950-51," written by William G. Key, distinguished author and commentator, and published in the October issue of *Pegasus*?

Mr. Speaker, there is none who will deny but that William Key's long experience in the newspaper world, his service as city editor of the *Atlanta Constitution*, his experiences and the knowledge gained in service as war correspondent accredited to the United States Navy in World War II, coupled with the wealth of information acquired as associate editor of the *McGraw-Hill Aviation News*, has stamped him not alone a great American authority on aviation in general, but particularly a distinguished and impartial authority on the use of air power as a military weapon by the several armed services of these United States.

One cannot read Mr. Key's article without appreciating the thoroughness with which he did his research work and

studies in Korea, and the enormity of the fact finding he necessarily conducted to bring out the facts upon which he reported with respect to the many phases of air operation in that country.

He stolidly, disinterestedly, and convincingly recites his findings. He names names and fixes time, not so much by periods or phases as he does by the hour, or else, by the very day.

There is one inescapable conclusion. It is that air power as used in Korea is, as of this very hour, forcing the decision in the Korean war.

The truce talks have been resumed. We hear no more talk of face saving by the Chinese.

Suddenly capitulating, the Reds have given up their demand that the truce line be set at the thirty-eighth parallel. This has lifted the issue from out of the realm of the political—and thwarted their desires to again establish a North Korea and a South Korea. It has placed the matter of making our battlefield truce where our military conferees have since the first insisted that it rightfully belongs—strictly in the field of the military and without regard to political boundaries.

To my mind, there is no gainsaying the fact that this right-about-face on the part of the Chinese Communists is directly due to the smashing attacks that have been leveled against their every operation by our Far East Air Forces.

Mr. Key reports that—in the opinion of those in the Far East who were qualified to speak on the subject—

"Communist front-line troops have been eating into their capital reserves of food and ammunition as a result of the United States Air Force interdiction campaign waged during the summer months, and which has recently been even more intensified.

"Contrary to the generally accepted belief that the Reds have built up for a renewed offensive, there is evidence justifying a completely contrary assessment of their situation. This situation now is seen as being parallel to that of last fall when the North Korean Army literally disintegrated under the twin blows of Air Force interdiction attacks and the Inchon invasion."

There is no doubt but that air supremacy over Korea gave our ground troops what General MacArthur declared to be "the greatest air support that any ground force has ever received in any war in history. It saved our Army on many occasions."

Supporting the statement of the Supreme Commander of the Far East Forces was that short, concise declaration of Lt. Gen. Walton F. Walker, who stated:

"Had it not been for the Far East Air Force, there would not be an American in Korea today."

In contrast with the empirical deductions made by certain of my colleagues in talking about the need of a separate tactical air force, Key did not find that the urgency of such a need was a simple black-and-white proposition which confronted the top triumvirate of airmen of the Far East theater in their air operations in Korea.

The first of the three to whom he referred was Lt. Gen. George F. Stratemeyer, who has long held a well-balanced approach between the strategic purists and the tactical enthusiasts; and that balanced approach was one of the major factors which saved South Korea in the foul hours of July and August 1950.

The second was Maj. Gen. Earle E. Partridge, commanding general of the Fifth Air Force, and one of the most able tactical air leaders to emerge from World War II.

The third was Maj. Gen. Emmett "Rosie" O'Donnell, who had been rushed out, at Stratemeyer's request, to head the build-up of the Far East air bomber command, a top World War II bomb-group commander, and who later became one of the most vocal advocates of strategic bombing of Manchurian targets.

In the article, *Air Action over Korea in 1950-51*, Key reports that the inescapable burden of command and decision, which was later to take its unhappy toll, fell upon General Stratemeyer.

In describing Stratemeyer's action, Key bluntly states:

Stratemeyer threw away the book and then began throwing everything in his limited arsenal into support of the hard-pressed ground troops.

Mr. Speaker, few people in the United States realize the saving of life that was effected among our ground troops by having our Air Force knock out the purely strategic targets in North Korea. These targets had long been used to maintain Japanese-Manchurian troops against the Chinese and Russians. These included the finest and largest plants of their kind in the Far East and were built by the Japanese to supply their war machines, safe from the United States Air Force attacks that struck at the Japanese mainland.

From his own discoveries, Mr. Key points out that—when so-called tactical air could be spared in Korea, the Air Force went after interdiction targets—"a day—or 2 days—or a week's supply away"—but that, basically, every last ounce of air support was afforded to the desperate men hanging with their ill-protected lives onto the front lines of the Pusan perimeter—only feet or yards—and not miles—beyond.

Contrary to the general understandings Mr. Key found that fewer than 3 percent of all sorties flown in the first 3 months of conflict were against strategic targets. From a statistical chart showing 29 missions flown on June 26, 1950, to the more than 500 being flown daily in the early days of August—the uninitiated can deduce little. The fact that the 29 represented zero in the close support column, and that the 500 represented from 300 to 390 in that same column, does tell a story. The close support sorties in early August of 1950 ran up to 389. Interdiction average well under 50. Strategic from 5 to 49, with many days blank.

On the 15th of August, the ground situation was reported by MacArthur's

headquarters to be considered stabilized. The air attack ratio then turned to the more traditional airman's concepts. Ground support—even with little artillery yet in Korea—dropped to about one half—and, from a less than 50 average, interdiction jumped to triple that number—with strategic strikes going out in 60- and 70-plane missions and few blank days.

Once released from the necessities of the front, it took the Air Force strategists a little more than a month to complete the destruction—and never since repaired—of the 18 most strategic targets in North Korea. The job was considered done on September 26. To the inestimable benefit of our ground forces—since that time—our B-29's have concentrated on keeping North Korea's 20 potentially dangerous airfields out of commission—and on knocking out pinpoint targets such as railroad bridges, marshaling yards, and port installations. They also have been used in exploration of some interesting new techniques of close support bombing, using radar and heavy air-bursting fragmentation bombs.

Mr. Key points out that the men who have actually lived with this war—feel that there is real need for a clearly defined redefinition of terms in relation to strategic and tactical air.

He supports his argument by stating that—

An F-84 loaded with 1,000-pound bombs and used in a specific way becomes a strategic bomber, while a B-29, a B-50, or even the sacred B-36, loaded with antipersonnel bombs, is a tactical weapon.

He particularly points up one thing that could easily be worth more to our Nation's security than would be an additional \$10,000,000,000 in congressional appropriation to the air defenses of these United States—and that is the rapidity with which the Far East Air Force availed themselves of every moment spent in actual warfare to train its personnel in the best usage of air power in tactical, interdiction, and strategic uses.

Mr. Speaker, the United States Air Force has made a virtual classroom and research laboratory of the skies over Korea in which to school our rated airmen in every maneuver that would improve procedures or promulgate action programs that will insure to the United States, and for years to come, the greatest fighting Air Force in the world.

No time was lost in initiating this intensive study with respect to the maximum use that could be made of air power as well as of various types of jet and other planes in a modern war. This, the Air Force has done from the standpoint of reconnaissance, fighter, pursuit plane, and bombers with respect to individual flights in various formations as well as in mass action. Never have I read of any military force that so completely or more intently exploited a proving ground to increase its efficiency and decrease its costs both in dollar losses as well as in casualties.

Phase two of the air action over Korea, Mr. Key wrote, started with the inva-

sion of central Korea through the port of Inchon. Air power had already effectively isolated the battlefield and had opened the gates for the invasion and the breakout from the Pusan perimeter.

On the day on which the invasion took place, all North Korean traffic from Sinanju and Wonsan south to the perimeter was literally at a standstill. Thus, it followed that all that was left to the Communists were the back trails and the A-frames on native backs. It was a classic example of battlefield isolation possible under conditions of air supremacy, exceeding even that of the Normandy invasion.

It readily becomes apparent after reading Air Power in Action Over Korea, that a tremendous economy of lives as well as dollars can be effected by virtue of the studied findings of the air forces of the United Nations in Korea. It is my judgment that a close evaluation of the damage done the enemy by the newer uses of air power—Air Force tactics and Air Force weapons—could easily result in savings of a large part of the \$59,000,000,000 recently voted by the Congress for national defense.

No man who sits on the Armed Services Committee in either House of Congress could fail to be impressed by that short, thought-compelling report made by General Stratemeier on July 16, 1950, wherein he said:

Rockets and machine-gun fire from F-80's have blown up more tanks, trucks, and other equipment—than all other types of air attack combined.

Mr. Speaker, few ever thought of using the airplane as a weapon to kill enemy personnel with direct hits from the skies—and yet, in Korea, the statistics show that between June 26, 1950, and as of this hour, our Air Forces in Korea have not alone destroyed and damaged a total of 551 enemy aircraft of the North Korean and Chinese Communists air forces in the air, but additionally thereto have actually accounted for 133,991 enemy casualties.

It is almost impossible to believe that the aircraft of our Far East Air Forces have already flown more than 316,000 sorties, destroyed 57,000 enemy vehicles, 1,143 locomotives, 22,000 railroad cars, and 588 railroad tunnels in Korea and that, in addition, our Air Force has destroyed, as of record, a total of 2,040 bridges.

Mr. Speaker, there are those who rightfully contend that there can be no such thing as a tactical air force ever established—that what the Congress desires to establish is the implementation of a branch of the armed services called the United States Air Force—the personnel and equipment of which can be used tactically, strategically, for interdiction, reconnaissance, transportation, and for all other purposes designed to subjugate an enemy.

Mr. Speaker, in the few days which intervened between the time I received the unanimous consent of my colleagues to revise and extend these remarks in the Record and the date of this writing, on a single day I read reports that our

Air Force pilots had destroyed or damaged 36 locomotives and 289 rail cars in a series of bombing and strafing raids centered in northeast Korea.

Mr. Speaker, air power is—air power. You may use it for strategic purposes. You may use it for tactical purposes. You may use it for reconnaissance, for interdiction, for transportation, and for other purposes.

Reports which emanate from Korea disclose no man under whom the ground troops of our country did finer or harder fighting than was seen under Brig. Gen. John H. (Mike) Michaelis in the Korean war.

A GI Joe himself, things looked pretty gloomy when Lt. Col. "Mike" Michaelis took command of the Twenty-seventh Wolfhound Infantry Regiment on the shrinking Pusan beachhead last summer, but Michaelis and his troops, aided by the Air Force, won out, and it was not long before they were again chasing the Communists back across the thirty-eighth parallel.

Mr. Speaker, I know of no man more highly qualified to speak of the value of the close support that was rendered to Gen. "Mike" Michaelis' troops than the general himself.

While stating that he would like to have permanently under his charge the Twenty-seventh Air Force Fighter Group, which was doing such effective work for him, he pointed out the attending costs to the United States Army when he said:

Organic air is a luxury that the United States Army cannot afford. You lose too much flexibility for what you stand to gain. You might be having a rough time of it—too much of a rough time for your organic planes to handle—while the division next to you might be having it comparatively easy. No, like a lot of other supporting weapons, it's better to have the planes back in one Air Force pool where you can call on them as they are needed.

Mr. Speaker, without further enlargement upon Mr. Key's article, Air Force in Action—Korea 1950-51, as published in the October issue of Pegasus, in the extension of these remarks I am inserting that article into the Record.

Mr. Key's article read as follows:

Air power may well be on the verge of forcing a decision in the Korean war.

Communist front-line troops, in the view of qualified opinion in the Far East, are eating into their capital reserves on food and ammunition as a result of the United States Air Force interdiction campaign waged during the summer months, and recently intensified.

Contrary to generally accepted belief that the Reds have built up for a renewed offensive, there is evidence justifying a completely contrary assessment of their situation. This situation now is seen as being parallel to that of last fall when the North Korean army literally disintegrated under the twin blows of interdiction attacks and the Inchon invasion. This collapse forced the intervention of the Chinese Communist armies.

The relentless pressure of this summer's interdiction program—averaging 100 rail cuts a day and netting thousands of trucks and other vehicles each week—is beginning now to show results that could be the most far-reaching of the entire Korean war.

If this radical new assessment of the situation is correct—and there is weighty evidence to support it—then the Chinese forces massed in the iron triangle are existing with a virtual vacuum between their depth defense lines and their major sources of supply behind the Yalu River. Expanded enemy air activity from Manchurian bases is interpreted as a reaction, so far unsuccessful, to the punishment being inflicted by the current interdiction program. This punishment, it is felt in Tokyo, is behind enemy efforts to renew peace talks without too great loss of all-important face; and behind General Ridgway's firmness in the same discussions.

Prediction, particularly in the far-eastern theater, is risky. However, it is an educated guess that the Reds are being cornered into a convincing cease-fire negotiation or that their air reaction will necessarily have to be more violent, the latter leading to a full-scale air war that will erase the barrier to which our air forces have been disciplined at the Yalu.

In the following pages are reviewed the 15 months of air conflict which have brought United States Air Forces and its Far East Air Forces to the point that this assessment can be made. A succeeding issue will deal in detail with the Combat Cargo Command and other services which have emerged in entirely new perspective during the Korean "police action."

The Korean air war began almost simply when four YAK-9's snaked through the dun-hued ranges surrounding Seoul and jammed across South Korea's prized Kimpo Airfield. A big MATS C-54 transport came into their sights and their guns burst slugs into the American insignie far back on the ship's fuselage.

This was the morning of June 25, 1950. Rumors had reached Seoul of a North Korean attack across the thirty-eighth parallel toward Ongjin, among the first of the strange names to become so familiar to Americans in the Far East. But there had been rumors before, and no particular concern was felt by the crew of the transport, or by the American Embassy and the North Korean military advisory group for which MATS operated this supply and courier plane. It had been damaged the day before, in retrospect perhaps deliberately, when a Korean laborer had slammed a forklift into one alleron. Otherwise, it would have been on schedule and back at Tokyo's big Haneda Air Base. As it was, it stayed at Kimpo to furnish a few spare parts months later.

The attack across the parallel came at 0400 a.m. The attack on the United States transport was made just before noon. Word was flashed back to Japan, and within an hour after this word, C-54's of the Three Hundred and Seventh-fourth Troop Carrier Group, the MATS One Thousand Five Hundred and Third Air Transport Wing and a motley assortment of C-47 and C-46 administrative planes from a hodgepodge of units were on their way to Korea to evacuate American personnel—some 850. From southern Japan, F-82's of the Eighth Fighter Bomber Wing were ordered to fly cover and protect the transports. The shorter-ranged and new F-80's were put up for escort across the Sea of Japan. There was no hesitation, no evasion of responsibility. Even while more long-ranging decisions were being studied in MacArthur's Dai Ich monolithic granite tower in Tokyo and in wood-frame Blair House in Washington, orders went out from Maj. Gen. Earle E. Partridge's Fifth Air Force headquarters for protection with charged guns. The fighters were fired upon that day by North Korean fighters, but no damage was inflicted and fire was not returned since the transports did not come under attack.

The next day brought a different story. Maj. James W. Little, leading the F-82 cover

patrol for the second straight day, was forced to one of the major decisions that have come to American military men down our history and generally are met with action. Little had authority but no orders to fire on the Communists. But he didn't hesitate when, for the second time, machine-gun fire streaked into the American insignie on a C-54. He took his flight of four 82's down to the deck, guns blazing into the LA-7's making the attack on the unarmed transports. Little, who accounted for the first Red plane destroyed in the Korean war, now is a lieutenant colonel and is still on duty in Japan.

It was not until later this day of June 26 that the Far East Air Forces was ordered into a "shooting war," with instructions to attack and destroy North Korean troops and equipment south of the thirty-eighth parallel, to prevent reinforcement of invading forces, and to furnish air supply to and from the Republic of Korea while continuing evacuation of Americans.

Little's decision was recognized with the award of a Silver Star for "his willingness to make the difficult decision to fire the first shot from American guns," and for his "gallantry in action against an enemy of the United States." His attack order had been almost as succinct as McAuliffe's at Bastogne, and an equally typical Americanism: "Sic 'em, boys."

There were the days of mixed decision. Beginning a few hours after Little's order to fire, the token forces then maintained in the Far East for support of the occupation of Japan were committed to action and the strangest war of American history begun. General MacArthur's operations instruction No. 1 laid out a program of action which, again in the retrospect of 15 months of conflict, was at least overambitious. Our program of air and sea action proved futile, and in a few days ground troops were to be committed. Our Far East Air Forces did attack and destroy North Korean forces south of the thirty-eighth parallel, but it was helpless to prevent reinforcement of North Korean invading forces even as it is helpless today in preventing the floodtide of men and supplies delivered unhampered to the edge of the Yalu curtain.

Combat units available to Lt. Gen. George E. Stratemeyer in his Far East Air Forces were scattered, and in some instances, had been low-priority groups, badly understrength for the job to be done. General Stratemeyer had the Fifth Air Force, with five fighter groups just converted from F-51 Mustangs and now equipped with F-80 Shooting Star interceptors, three F-82 all-weather squadrons, one B-26 group, and scattered other specialized squadrons. There was also a Royal Australian Air Force F-51 squadron operating under FEAF control, but not available for combat until June 30. Three of the fighter groups were in Japan, one at Clark Field in the Philippines, and another one on Okinawa were hurriedly ordered into the Japanese area. Two F-82 outfits in Japan were reinforced with the third from Okinawa. Thirty-seven F-51's in moth balls near Tokyo were pulled from storage and manned by pilots from various headquarters and service units scattered throughout Japan. Later, another 145 F-51's were shipborne to Japan—aboard the crack Essex class carrier U. S. S. *Borger*, which crossed the Pacific in record time—and formed into combat groups. The Nineteenth Bomber Group, which was under FEAF control, was ordered up from Guam to Okinawa with combat loads ready to go into action, it mounted its first mission on the twenty-eighth. The Ninety-second and Twenty-second Bomb Groups were ordered out from the States to operate under the FEAF bomber command.

The Far East Air Forces had moved and moved fast with the limited means at its beck and call.

Units in the Far East had been engaging in live firing, and were as combat-ready as possible under conditions which had trained them for an entirely different type of conflict than the one which unfolded in the next few months across the Korean peninsula. It was a new kind of war for the United States, and taught lessons that must on the one hand be heeded, and on the other, unlearned, in a major war.

The next few months were to see a desperate attempt to keep a foothold on the peninsula. Three days after the first shots had been fired by United States air units, it became obvious that the South Korean ground forces were breaking badly. The Han River line was breached and Suwon abandoned. President Truman ordered use of American infantry, drawing upon the occupation Twenty-fourth Division in Japan. First elements of the Twenty-fourth were air-lifted to the Taejon area, below beleaguered Seoul, on July 4, the first flights of the most extensive airlift operation in history. An air-ground operations center was in operation the following day at Twenty-fourth headquarters, with jeep tactical air controllers operating that day at Chonan. The T-6 Mosquitoes were flying on July 6, completing a close-support organization within 9 days of the start of the shooting war and 2 days after the first piecemeal commitment of American ground forces in the wild attempt to contain the hard-rolling North Korean sweep toward the critical port of Pusan at the southern tip of Korea.

All the traditional concepts of air war were virtually useless in this situation, and decisions had to be based on the degree of desperation of the day and the hour. The old theories of strategic and tactical considerations could find no shelf from which they could be dusted off and put to use. The shelves were shaking with the pounding of a foe rich with the taste of blood and already eager for the kill. Ground units had been committed to action not only piecemeal, but with less than 10 percent of their heavy firepower. They were fighting an action that has no successful parallel in history and their only hope of staying on the Korean peninsula was through use of air power in a role that until then had been considered unrealistic. It would have been against a major foe. Throughout the Far East, the Air Force threw away the book and began throwing everything in its limited arsenal into support of the hard-pressed ground troops.

To put the events of the next year in some form of perspective, Korea itself must be understood. It is not like any other section of the world. It often reminds people of parts of North Africa, or our own New Mexico or Arizona. But it is unique, and luckily so. It is a hard land, stretching its barren mountains to trap silt-laden waters for the meager rice paddies from which come the miserable existence of the Korean people. It is a land of harsh extremes, from stinking, steaming tropical heat in the summer months to bitter, moisture-filled cold in the winter, from all-pervading dust in the dry season to glue-like mud in the wet. There are no extremes in the poverty which lays like a chill blanket over the entire land, broken in the past only by the homes of the Japanese who dominated the land for 40 years before World War II, and by the missions and hospitals built by American religious groups in futile efforts to allay the disease that festered the land in its poverty. Ironically, these now provide many of the headquarters for war, and the poverty of the land is heart-rending.

The mountains and their lower ranges all are an almost neutral color, shading from dun to a deep khaki, where only here and there some junior-sized scrub pine relieves the monotony of their eroding slopes. Straggly dirt roads lace the valleys, patterned

against the light green of the paddies deepening to the darker green of the small vegetable patches nearby the small settlements of mud huts with their rice-straw-thatched roofs, festooned with growing melons in the summer months. The roads meander off into trails set in an exaggerated zigzag up to and along the ridge lines—the trails that were to mean encirclement and death or capture to so many of our valley-bound troops in the early days of the conflict. Here and there in a high lip of the hills will be a small rice paddy tucked away, and from an occasional lake in the uplands the paddies step in terraces down to the bottom lands.

There is an unearthly cast to many of the deserted villages north of Seoul, from which the refugees clogged the roads south. They remind the passer-by of a setting for a moon movie, the huts nesting on steep slopes by the dirt road running between high, eroded cliffs that throw an eerie light into the valley. Only here and there is a hut occupied, enough only so you know they weren't left there by a forgotten race some centuries ago. The mark of war is upon them, small arms fire often pitting their walls. Their people would be a hardy race to return at all.

In Seoul, and Taejon and Wonju—the names until last year best known in the United States to the National Geographic Society—there are the more bitter signs of conflict. Seoul in particular had been built into a modern city, one of the more progressive of the Orient under its Japanese masters, with a network of streetcar lines and clean-cut modern buildings revealing a heavy influence of Swedish architecture, softened by the Oriental love for intricately designed stonework. Today the streetcar wires hang listlessly broken in the streets over most of the city and only a few refurbished cars run along the central main streets. Shells of buildings line the sidewalks and rise lonely in the open areas, where bombs and shells laid waste a wide swath. Those modern buildings which were not left hulks have mostly been occupied by the United Nations forces. Those people who have returned to Seoul, a remigration discouraged by military authorities, have fashioned their life in remnants of back alley hovels. Some have set up little stalls in the shelter of bombed-out stores, their main stock in trade the brightly colored comforters so characteristic of Korea, about the only brightness in a drab land. Others offer the flags of the United Nations in gaudy hues foreign to the countries so honored. There is no water in the city, except that brought from the Han River by hand or by truck, little electricity, little food. But still the people of Seoul trickle back, to the concern of the military forces which must always consider the need for hasty evacuation should the front lines explode only 40 miles away.

The build-up of the Chinese Communists during the summer months has been matched in good measure by our own forces, and efforts to put the city back into working shape have stretched temporary water mains across the restored highway bridge, patched and cleared the streets, erected tent cities here and there within unit compounds, and set up spartan post exchange facilities to serve the headquarters units operating there. The only official oasis in the area is an intricately patterned Chinese temple in which a club has been set up, and to which men once in a while drive 100 miles to visit for a few brief hours. Signs everywhere warn that native liquor kills, and there have been enough fatalities to convince the troops of the message.

Beyond Seoul to the north there is left little semblance of civilization in Korea. Convoys and tanks grumble toward the lines,

with here and there a new U. N. tank trundling its heavy guns to counter the Russian T 34 tanks, a sign that we have not been neglecting the opportunity to counter the Chinese efforts to get into shape for an attack. In the lines themselves, enough probing action has been maintained by the Allied forces to force the Chinese to use up hard-won supplies and to prevent any surprise massing of break-through units. The troops are dug in, now at long last with their organic artillery, and, most important to the air war, adequate communications back through the channels needed to bring up air support promptly and effectively when necessary. Far to the east, South Korean units have been regaining the respect of their allies in a bitter campaign up through the mountain ranges, where their only source of supply is by pin-point air drops from C-119's, required almost daily in all kinds of weather.

In the back areas, training is constant and hard. Airfields are being built and old ones expanded, but even with this expansion cluttered by the number of planes they have to support in restricted space.

Through it all there is an air of confidence, and, through it all, a buttoning down for the harsh winter months ahead. Tent sides are being built up from used rocket and other supply cases, built up from cot level to roof-level against the penetration of Korean bitter cold. Quonsets are being buttressed against the cold and enemy attack with dirt and sand bags, and the few light concrete huts chinked to keep within some moderate warmth. Stoves are checked and clothing gone over, the lesson of last winter heeded and the supply depots heavy with the needed heavy gear of a frigid war.

The airfields from which the fighters, the light bombers, the fast reconnaissance ships, and the slow flare planes operate are a curious mixture. In some ways, they are reminiscent of advance fields in France in World War II, but they have their own peculiar flavor here in this Korean fantasy. Most have steel-plank runways, smoother usually than the more desirable but heavily patched concrete of rebuilt Kimoo and Suwon. They are tucked, for the most part, in the fold of hills. In bad weather they are a nightmare into which to make a let-down. Without GCA, there would be little Korean air war, for there are few days of perfect conditions and a pilot can count on at least one-third of his flying being a bad-weather operation. Few runways are long enough for the operations being conducted from them, and, with some of the later type jets, RATO take-offs are standard procedure until the runways can be lengthened to their requirements. Transports operate into and out of fields for which they were never designed. Both jets and transports are hitting high maintenance rates, with their additional burden, as a result of the beating both are, of necessity, being given. Modern earth-moving and packing equipment moved in during the summer have speeded work on the airfields far beyond the hand pace of the Korean laborers, but it is still slow going and the calculated risks of jammed fields give commanders and crews a constant qualm.

Radar and antiaircraft equipment has been brought in, in quantity, so that should our air supremacy, absolute now, be challenged, the enemy will not find his reception one of cordial welcome.

One point should be clear. The Chinese-Russian air forces marshaled behind the curtain of the Yalu River have a capability for most serious challenge to allied air supremacy, both over the front lines and back into the rear areas. Determined, he could stage his MIG's through North Korean fields into the front lines. His twin- and four-conventional-engine planes are available in quantities capable of giving the allies a

rough time all the way back to Pusan, and quite probably into Japan itself. There is no effort in this theater to hide this fact, or to gloss it over. Red raids into the Seoul, Taegu, and Suwon areas have been nuisance raids with antiquated equipment and piddling armament. They are in no sense his best effort, and a Sunday punch sits on the ground to the north.

Again, as in the larger case of Russia itself, it appears that his hand is withheld by the fear of retaliation, for there has been no mincing of the fact that a massive, or persistent air attack into or south of the front lines will unleash our own Sunday punch against Manchuria and beyond. The maps with the airfields and the cities of Manchuria and China are never hidden in the war plans rooms, but are there for anyone to see and only the details are withheld. The planes to mount the massive attacks are only 48 hours away, back in the States. The carrier task forces need only switch their deck loads and armament to sweep on this new course. Nor are other task forces long away.

These realities, and not our weight on Korean or Okinawan or Japanese bases, withhold an enemy effort to turn our air supremacy into a vicious, desperate battle for control of the skies over the Far East. In a sense, this small, second-class situation is but a reflection of the larger, primary considerations of global conflict. Seoul and its complex of field headquarters and airfields is Washington or London or Paris in the larger arena, just as Antung over the Yalu is Peiping or Moscow.

That, in general, is Korea today. It wasn't always so.

As we massed our air forces in the Far East in July of 1950 and brought the quickly mobile medium bombers from the States into action over the ready MATS routes, and built up our air supply potential over these same routes, a welter of hard decisions had to be made. Land forces were committed in desperation and couldn't live in Korea a week without relatively massive air support and supremacy to replace the artillery and supplies they didn't have and wouldn't get until more than a year had passed and the pipelines were filled. Fast carrier task forces had to be brought to action. Our fighters had to be husbanded until new shipdeck loads could be made ready and speeded from the States with the crews to handle and fly them. The retreat continued, back through Taejon, through Wonju, through Kuncheon, until, on August 3, the North Koreans stood on the hills above Taegu and lobbed mortar shells onto the city's airfield. A few more miles and the Korean police action would have been booted out of the beer hall. There, along the Nakdong River line, the North Korean advance ground finally to a halt.

By the book, there were certain things to be done. There were strategic targets in North Korea—18 to be exact—against which the strategic bombers could be sent immediately and exclusively. By the book, tactical fighters and bombers would have begun an interdiction program, taking out the bridges, railroads, and supply roads back along the line to, say in this case, Pyongyang.

There were factors here, and concepts, that date back to the infancy of the Army Air Corps. It wasn't just a black and white proposition confronting the triumvirate of top alms in the Far East theater.

Lt. Gen. Stratemeier, long one of the middle-of-the-road advocates between the strategic purists and the tactical enthusiasts. His balanced approach may be considered one of the major factors in the decisions that followed and which saved Korea in those foul hours of July and August 1950.

Maj. Gen. (now Lt. Gen.) Earle E. Partridge, then commanding general of the Fifth Air Force and one of the most able tactical air leaders to emerge from World War II,

Maj. Gen. Emmett O'Donnell, who had been rushed out, at Stratemyer's request, to head the build-up of the FEAF Bomber Command, a top World War II bomb group commander and later to be one of the most vocal advocates of strategic bombing of Manchurian targets. Significantly, he doesn't stay very far from the Far East today, although he holds no command there.

Each of the latter two may be considered to have had varying views on many of the decisions that were to be forthcoming. The concepts of each, and the training of those serving with them, had their roots back in the early thirties when the basic principles of air war today were being formulated; when new concepts were growing out of the development of the Martin B 10 and the period in which Thompson trophy and Schneider cup races were building geometrically increased speeds into fighters. Both had fought in a major war with problems more complex but less confusing than this limited and restricted war being fought across a narrow sea from their headquarters in Japan.

The inescapable burden of command and decision fell upon General Stratemyer, later to show its toll. He threw away the book, and with the full support of Partridge and O'Donnell tossed everything in the air into the battle just to keep the troops in Korea. The B-29's were used as culvert smashers. The interdiction work of his forces was concentrated on the single stage of keeping today's supplies from reaching the enemy front lines today.

Such B 29's as were not needed on the front lines themselves began the job of knocking out the purely strategic targets in North Korea, some of them the finest and largest plants of their kind in the Far East, built up by the Japanese to supply their war machine safe from the attacks that struck their homeland. They had long been used to maintain Japanese Manchurian troops against the Chinese and the Russians. They were not minor targets, by any means. When tactical air could be spared, it went after interdiction targets a day, or 2 days, or a week's supply away. Basically, however, everything went into the support of the desperate men hanging with their ill-protected lives onto the front lines of the Pusan perimeter, feet and yards rather than miles beyond him.

A note from General Stratemyer's official diary, recounting a conference with General MacArthur, points up this concentration:

"It is my opinion and unless you direct otherwise, I will operate every combat airplane in the Far East Air forces in support of ground troops against only those targets in battlefield support as suggested by Fifth Air Force advanced headquarters in conjunction with General Dean's headquarters."

Fewer than 3 percent of sorties flown in the first 3 months of conflict were against strategic targets.

From the 29 missions flown on June 26, 1950, to the more than 500 being flown daily in the early days of August can be read little. The fact that the 29 represented zero in the close support column, and the 500 represented from 300 to 390 in that same column, does tell a story. The close support sorties in early August of 1950 ran up to 389. Interdiction average well under 50, strategic, from 5 to 49, with many days blank.

On the 15th of August, the ground situation was considered by MacArthur's headquarters to be stabilized. The air attack ratio turned to the more traditional airman's concepts: Ground support (even with little artillery yet in Korea) dropped to about one-half, and, from a less than 50 average, interdiction jumped to triple that number, with strategic strikes going out in 60 and 70 plane missions and few blank days. Once released from the necessities of the front, it

took strategic air just a little more than a month to complete the destruction, never since repaired, of the 18 strategic North Korean targets. The job was considered done on September 26, and since that time the B-29's have concentrated on keeping North Korea's 20 potentially dangerous airfields out of commission, and on knocking out pin-point targets such as railroad bridges, marshalling yards and port installations. They also have been used in exploration of some interesting new techniques of close support bombing, using radar and heavy air-bursting fragmentation bombs.

There is a dangerous deduction to this early phase. It assumes that there always will be decisions as quickly and intelligently made and as loyally carried out. This phase proves that air power, if it is to maintain the world we know, must be flexible enough to meet any kind of emergency conditions, and that it cannot be built for or restricted to any one type of war. Korea may well be a second-class war; there will be other second-class wars with their inherent dangers of major war unless they are contained as successfully as this of Korea has been bottled to this date.

There is a distinct and influential school in the Far East Air Forces today the men who have lived with this war—which feels that there is need for a redefinition of terms in relation to strategic and tactical air. This school argues that you cannot define a particular airplane as strategic, another as tactical. They assert that Korea has proved this thinking illogical, that the application of an airplane in a given situation determines whether it is being used in a strategic or a tactical sense, and that the crews who fly them should be so indoctrinated. They maintain that an F-84 loaded with 1,000-pound bombs and used in a specific way, becomes a strategic bomber, while a B 29, a B-50, or even the sacred B 36 loaded with antipersonnel bombs is a tactical weapon.

While this may seem basic and perfectly simple, it did not prove so in the early Korean days when the crews of the B-29's neither understood nor liked their tactical missions until the need had been drawn out for them in fine print and blunt language by their own top commanders, who did accept it. Even today it is easily apparent in the Far East that the strategic bomber groups suffer a divided loyalty, being drawn from the strategic air command and its rigid doctrines to operate under the Far East Air Forces and its necessarily flexible approach to the use of aircraft as a weapon of opportunity or necessity.

The first period of the Korean air war ended roughly the first week in September 1950. This was just a little ahead of the first phase of the ground war. On the ground, the retreat had ended, but the enemy still was capable of crippling attack. By the first of September, the interdiction program, started as soon as pressure on the front lines eased, had knocked out 80 percent of Korean key rail and highway bridge targets.

The pattern of these strikes was designed not only to prevent supplies from reaching the front lines, but also to isolate the Inchon-Seoul area for the daring gamble of invasion that was to come in mid-September. The main supply route, rail and highway, from Antung in Manchuria down through Sinanju and Pyongyang had been badly battered, and the North Koreans then did not show the facility that the Chinese Communists now have for utilizing and repairing makeshift river crossings. The area of the east coast invasion at Wonsan had been cut off from Pyongyang, and from Chongjin to the north, primarily by naval aviation operating from carrier task forces. South of Seoul, communications had been cut along the Seoul-

Suwon-Taejon line, up which the North Koreans could move their southern forces to strike the limited invasion units.

Generally speaking, the B-29's were hitting north of the thirty-eighth, the light bombers and the fighter bombers in the south. But even in these late stages of the first period, B-29's were being drawn back and used tactically as the situation dictated. The first week of September, when the North Koreans made what was to prove their last desperate drive for the sea against the Pusan perimeter, the 29's were pulled back and operated in a 7-day close support program that saw the first "carpet bombing" effort—about which there still is disagreement. The FEAF view is that the area was too large for the number of bombs which could be dropped; that the bombers did not get a pattern over the entire area, but only patterns within the area. Intelligence estimates of the Army placed 40,000 enemy troops in the bomb area, but the impression in FEAF now is that this is high. All things considered, however, it was felt the effort was worth while, if only from the morale standpoint for the doughfoot battling valiantly on the ground.

The principal shortcomings of air and ground forces—and there should have been plenty for both—became evident during this first period. A primary cause of trouble and friction, despite recognition that air power was keeping ground troops on the peninsula, was the paucity of communications equipment, particularly from advance ground units back through command levels, that delayed or did not provide air support strikes. This situation since has had attention, but it has only been in the past few months that it has been considered fully corrected by Army and Air Force.

Adjustments had to be made to fit in the high capabilities of naval aviation, with the Korean Peninsula an ideal carrier operating theater. Carrier forces were on the scene as early as July 3. Complaints soon were heard that carrier planes were not being used to their maximum effectiveness. This was true. Carrier operations at that time had their own shortcomings, principally in that they launched a 75-plane strike at times when worth-while targets were not available for all 75 to hit while airborne. This now is controlled through the joint operations center, with naval capabilities being assigned on a preplanned basis, and with the flexibility of the carrier task forces being utilized as much as possible. Generally, carrier aviation has been concentrated on targets along the eastern Korean coast in a heavy interdiction program, with specific tasks assigned across the entire front in ground support.

The somewhat bitter Air Force-Marine close-support philosophy also clashed in these early stages, but any open friction was minimized by continuing the Marine concept of assignment of a wing of support fighters to the Marine division involved on the ground. FEAF maintains that this kept peace in the family while at times giving the First Marine Division more close support than it would have had under a centralized direction of front-line needs, and at other times giving it all that centralized control could pour into any area. The situation, of course, was ideal from the standpoint of Marine close-support doctrine, in which training is concentrated on use of air as division artillery in amphibious operations until such artillery can be brought ashore—a condition that held true in this particular campaign for the Army as well.

There was criticism in this period also from the lower echelons of the Army. While Generals Partridge and Walker flew together in dangerous reconnaissance flights over enemy lines and keyed their forces together in what will long be studied as a classic military example of exploitation of limited forces to counter enemy masses, there were claims

that the Air Force was not delivering—claims that came up from smaller units. Yet, there was more close support, quantitatively, than was ever given in the palmiest days in Europe. FEAF maintains also, and is supported by Army commanders, that close support was more effective than in Europe, the reason being that it has only been within the past few months that the Army has had the mortars and artillery it needed for the Korean situation. In these early days, it was necessary for aviation to take care of machine-gun nests which normally would be the job of mortar fire. When it was unable to spread itself thin enough to provide all the artillery support needed, it began to get the criticism of the lower units. Other elements of the criticism were inherent in the weakness of Army communications from front-line units into higher headquarters, which qualified FEAF experts maintain has only in the past few months been fully corrected—a period in which the Air Force itself has corrected weaknesses in its own communications which gave it too few radio channels for direction of operations across the entire front. An example of the problems they are talking about is the only recent establishment by the Tenth Corps of a joint fire control center coordinating artillery and air strikes, assigning each to the most effective targets. This has served to reduce the demand for air strikes and has freed many Fifth Air Force planes for interdiction strikes without reducing the effectiveness of fire power against the enemy.

Phase 2 may be said to have started with the invasion of central Korea through the port of Inchon. Air power had already effectively isolated the battlefield, and had opened the gates for the invasion and for the break-out from the Pusan perimeter. On the day of the invasion, major North Korean traffic from Sinanju and Wonsan south to the perimeter was literally at a standstill. All that was left to the Communists were the back trails and the A-frames on native backs. It was a classic example of battlefield isolation possible under conditions of air supremacy, exceeding even that of the Normandy invasion.

In this period, a new element of air entered the Korean war when the combat cargo command began its full-scale operation of supply and air evacuation under the direction of Maj Gen William H. Tunner. The full extent of this new factor is a story in itself, one which will be covered in detail in the November issue of the Pegasus. But the first few days of this operation proved that logistic mistakes or mishaps no longer need prove fatal to the success of a military operation. The extreme difficulties of the Inchon harbor tides delayed such crucial items as a pontoon bridge for the Han River, brought in speedily by use of the flexibility of the then new combat cargo command operation.

By the 3d of October, General Stratemeyer could proudly recapitulate and could afford to philosophize: more than 40,000 sorties flown between the 26th of June and the end of September; 29,000 tons of bombs delivered, and 23,000,000 rounds of ammunition; more than 1,100 tanks destroyed or damaged; more than 370 bridges down or damaged. It has cost 139 planes, 96 from enemy action, and 175 lives. It had again shown the lesson so severely taught in the last war—that control of the air is essential to the success of surface operations. . . . the only air-planes our troops saw were our own. The enemy was restricted to night movements over harassed and battered communications routes; his supply of rolling stock and vehicles was sharply curtailed; he lost most of his tanks and much of his artillery. . . .

He dealt then with a subject that was beginning to concern the top airmen—the beginning of the build-up to the north had

perhaps begun to filter through air intelligence sources. Air supremacy over Korea was quickly accomplished. Through the enemy's air force was small, it could have given our ground forces plenty of trouble, if allowed to operate unhampered. As it happened, the air battle was short and sweet. After the first few days, the enemy no longer had an air force. But I need not dwell on the fact that, had the enemy possessed a modern, effective air force, the whole picture in Korea—from the viewpoint of land, sea, and air forces—would have been vastly different. Nevertheless, we had to continue reconnoitering and sweeping his airfields for any signs of build-up of air strength. You recall the sightings and destruction of enemy aircraft as recently as last Saturday. This task of maintaining air supremacy is always the first charge on our air resources.

Less than a month later the air battles of the Yalu curtain began in earnest, and F-86 Sabrejets were rushed out from the States to counter the fast and able MIG's, getting into the border action about the middle of December.

Meanwhile, the land warfare had rolled north, extending to the Yalu on the east-central front and north of Hamhung on the east and Sinanju on the west. Our own attack had been geared to airborne supplies. The attack and the air supply columns had been screened from enemy counterthrust by sweeps of F-80's into the Sinuiju air bastion on the Yalu northwest of Sinanju, while 80's, F-51's, and B-26's pounded retreating columns. The F-80's held their own, although the MIG's were demonstrably faster, though not as well handled. The first decisive jet-to-jet air encounter in history took place on November 8 near Sinuiju, with First Lt. Russell Brown, of the Fifty-first Fighter Wing, splashing a MIG-15. The 80's held the corner until December 19, destroying or damaging more than a dozen in the critical 6 weeks before the 86's arrived.

Meanwhile, during November and the high-water mark of the ground attack northward, the success of the Fifth Air Force and the FEAF bomber command in the interdiction program was nullified by the shortened supply lines of the North Korean Army. Thoroughly disorganized and reeling in a retreat slowed only by the U N supply problem, the North Koreans nevertheless were piling back into an area from which they could be supplied in quantity and with impunity. As it turned out, they were both supplied and then reinforced by seven Chinese Army corps. United Nations troops were swept back below Seoul, and once more the Communist supply lines became exposed. The fury and impetus of the enemy drive also led them into heavy daylight movements that became meat for the grinders of fighters and light bombers. Whether through foolhardiness, or through a decision to sacrifice enormous numbers of units to maintain the pace of advance and to prevent our ground troops from digging in and slowing the onrush, the Chinese Communist armies attempted to move masses of troops along West Korean roads in daylight. Thirty-four thousand—one of the seven corps in the attack—died along the highways under the fire of machine guns, bombs, and napalm. It was a decimated Chinese Army that was finally pulled to a halt below Seoul in mid-December.

The next 6 weeks, in the period to the end of January, were virtually a duplication of the Pusan perimeter tactics of the Far East Air Forces. Enemy supply lines came under interdiction attack. B-29's screened by fighter cover and sweeps along the Yalu hammered at the northern bridges, marshaling yards and airfields. Lighter bombers and fighters rocketed, strafed, bombed, and napalmed in the Pyongyang-Wonsan-Seoul triangle, with the carrier task forces moving in to hammer the coast from Chongjin south to

Taepo-ri. The parallel became almost exact in the few days after January 1, when the Chinese attempted to get another offensive rolling toward Fusan. More than 4,000 sorties in 5 days broke the back of the attack and the stage was set for our own offensive scheduled for the end of January and launched on January 25, after a careful interdiction program had virtually isolated Chinese from reinforcement and supply.

Air power had swung into high gear in the 3 months of retreat and readvance. More than 60,000 sorties were flown, a build-up made possible by relatively small but important reinforcements of two wings of fighters, the 86's of the Fourth Fighter Wing and the F-84's of the Twenty-seventh Wing; one wing of B-26's, the reserve Four hundred and fifty-second Bomb Wing, a California outfit, and a South African squadron equipped with F-51's. Additionally, there had been some "beefing up" of existing units to bring them to war strength. This period accounted for 38 percent of the bomb tonnage in the first 8 months of warfare; two-thirds of the napalm, half the ammunition, and almost half the rockets and combat cargo.

This pace was to be maintained through the spring months up to the summer lull that followed the opening of the Kaesong armistice talks. In this period of supposed peace arrangements the Communists redoubled efforts to build up massive supplies in the Iron Triangle sector just to the north of the thirty-eighth parallel. The ground fighting lulled into patrol action, while at the same time ground troops were getting heavy artillery fire support freeing the fighters and light bombers for more far-ranging activities.

With the full agreement of the Eighth Army commander, Lt Gen James Van Fleet, the new commanding general of the Far East Air Forces following General Stratemeyer's serious heart attack of late spring, Lt Gen Otto P. Weyland, launched his forces on a major interdiction program that has chipped away at the enemy's lines of communication with a carefully programmed attack. This attack may well be one good reason for the sporadic willingness of the Communists to talk military armistice. The Communists are getting supplies through. They have become past masters at night movement, at camouflage and highway, bridge, and rail repairs. The cost in manpower is high. It is problematical whether or not they have been able to build up enough reserves to launch a full-scale offensive and maintain it, without being able to resupply themselves on the massive scale which now would be required. It further is problematical whether or not both forces have not now fashioned defense lines in depth that could lead to the trench-warfare type of stalemate that marked World War I. There is only one effective bypass to such a stalemate: airborne or seaborne assault, or both, behind enemy lines.

There are counterbalancing factors. The enemy air build-up behind the Yalu has been heavy. Early in the year, 30 MIG's were standard. Later, this became 60. Today, 120. They have other forces, as mentioned earlier, utilizing conventional planes of twin- and four-engine types. Their anti-aircraft has stepped up considerably, as mentioned. It is capable anti-aircraft fire, radar-directed in many instances and accurate enough to be costly. It is increasing all the time, as is the Red use of night fighters to counter the after-dark excursions of our Firefly missions, coupling flare-dropping C-47's and B-26's in a deadly team. Light ground fire has improved and 20- and 40-millimeter type anti-aircraft has been stepped up in the front lines and along the major supply routes.

The Reds are learning many lessons which we, unfortunately in some respects, are rapidly forgetting—our daylight, close-packed

convoys, our lack of antiaircraft discipline from the front lines back into advanced headquarters, and major supply depots, an almost luxurious close support operation and a heavy air supply that permits and minimizes logistic mistakes and shortcomings. They have learned techniques of bridge repair that draw the grudging admiration of our Corps of Engineers and the airmen who have to go back time and time again, day after day, to keep key bridge lines knocked out. We have husbanded our jets for specialized jobs and have taken advantage of the slower F-51's and B-26's which in a war against a major power would be suicide craft. We have practiced knocking out enemy airfields; they have practiced putting them back into operating condition.

Our methods of operation have become an open book to the Reds. He has kept his planes based behind the Yalu curtain and has changed only his traffic pattern to avoid climbing out on the wrong side of the river. We have measured only a few of his jets, mostly MIG types; he has tested his against the 86, the 84, the 80, the 51, and the B-29.

We have, of course, learned our own lessons. Many of them. Our confused early patterns of close support arising from new plane types and lack of nearby bases, our basic channels of calling in support, of evaluating the need for support, mutual understanding of the conditions of support and the balanced value of interdiction operations all have emerged in a perspective which did not exist on June 26, 1950. This is true to such a degree that talk of tactical-strategic strength disagreements and Air Force-Army friction back home draw a puzzled frown in the Far East. Here, at least, the Air Force and the Army have been down to see the preacher and took the Navy along as a witness.

We have been evaluating the training of our fighter pilots. The F-86 is not better than the MIG's, nor is the F-84 its equal. But the pilots are, which explains the destruction of MIG's in a 13-to-1 ratio to the end of September. But, again, conclusions are dangerous since there is a distinct feeling in the Fifth Air Force that the Red operation is largely one of training and that few of the pilots—be they Russian, Chinese or satellite—are out of first-line units.

We have been developing entirely new lessons of air supply and air mobility both for ground troops and air units; these will be of inestimable value in other theaters, particularly in Europe where the current concept of fighter use is instant ability to shift bases from one sector to another and one country to another.

Our Far East Air Forces have done well under the most difficult circumstances. As this is written, in Tokyo, the undercurrent is of cynicism about the latest "peace talk". The guns are loaded, the barrels of the anti-aircraft guns swing against the skylines. If it should be an armistice, fine. But no one expects it, really. Tomorrow's mission is still very personal.

The Facts About Our Budget

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. HUMPHREY. Mr. President, there has been a great deal of public discussion about the necessity to balance our national budget. I welcome that discussion and personally share very strongly the desire of our people to avoid deficit financing at this time. That is one of

the reasons why I joined a number of my distinguished colleagues in working on the floor of the Senate toward the adoption of a tax bill, consistent with the President's recommendations, which would distribute the tax burden equitably and which would be adequate to achieve a balanced budget.

There has, however, been a great deal of discussion about Federal finances which in my judgment has not been constructive. Much of it has, in fact, been motivated by a desire for partisan political advantage and has served to confuse rather than clarify. Some of this material has included misinformation and it is with a desire to keep the record clear and present the facts that I ask unanimous consent to have certain materials prepared by me placed in the Appendix of the Record.

The material to which I refer and which in my judgment needs refuting includes a statement issued by the United States Chamber of Commerce and an article which has received wide attention and mass distribution called *In Washington It's Waste As Usual*, which appeared in the July 1951 issue of the *Reader's Digest*.

Specifically, in connection with the latter, I ask unanimous consent to have a letter and materials submitted by the Bureau of the Budget in reply to my request likewise printed in the Appendix of the Record.

There being no objection, the material was ordered to be printed in the Record, as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D. C., October 9, 1951.
Hon. HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.

MY DEAR SENATOR HUMPHREY: Thank you for your letter of August 27, in which you requested a reply by the Bureau of the Budget to the article "In Washington It's Waste As Usual," which appeared in the July 1951 issue of the *Reader's Digest*.

I have had my staff investigate in detail the allegations made in that article. The staff analysis attached to this letter is the result of their work. The article does not analyze in any comprehensive manner the extensive operations of the Federal Government, but is primarily limited to repeating a number of old and isolated incidents of inefficient operations, many of which have long since been corrected. This has been combined with some very general charges, unsupported and often at great variance with the facts. The staff analysis demonstrates that proper investigation of facts will disprove these charges.

The following are the main charges made in the article:

Charge No. 1. The Government wastes manpower.

The only concrete evidence presented in support of this charge is the statement that "from June 30, 1950, to January 1, 1951, civilian employees were added to Government payrolls at the rate of 1,000 per day." Unaccompanied by any description of the reasons for these increases, this statement gives a misleading impression of waste in the Federal Government. The truth of the matter is that the increases in Federal personnel during the period cited in the article took place in the Department of Defense, primarily at air bases, shipyards, ordnance plants, and related military installations which were being constructed and expanded as the result of the fighting in Korea. The article fails to point out that in the very

same period the number of employees in the rest of the Federal Government actually decreased by over 20,000.

The article also erroneously states that the average Government employee works only 1,650 hours a year. The staff analysis points out that the most recent studies report the average hours worked a year by Federal employees as 1,797. This latter figure excludes many hours of unpaid overtime work.

Charge No. 2. The cost of handling small purchase orders is exorbitant.

The article reports certain figures as the cost of selected purchases. For example, it is stated that it cost \$13.39 to purchase a 50-cent magazine. The staff analysis shows that this figure has no basis in fact. It is simply arrived at by dividing the total cost of all purchasing activities in the bureau concerned by the total number of purchases made. It is as inaccurate and misleading to apply this average figure of \$13.39 to the specific purchase of a 50-cent magazine as it would be to claim that it only cost \$13.39 to purchase an involved and intricate piece of machinery costing several million dollars.

Charge No. 3. The Federal Government has increased public assistance expenditures in a period of high prosperity.

The staff analysis points out that the law requires the Federal Government to reimburse the States according to a statutory formula for their expenditures for assistance to the needy aged, blind, dependent children, and the totally disabled. Federal expenditures for public assistance have risen because the States are spending more for this program. Moreover, the Congress has recently widened the coverage of public assistance benefits. In order to reduce Federal expenditures for this program it would be necessary for the Congress to change the laws governing public assistance payments.

Charge No. 4. Agricultural programs have not been curtailed.

Contrary to the assurance in the article that we are "insured against any economizing there," the staff analysis shows that such highly desirable programs as rural electrification and farm housing have been slowed down. Moreover, since Korea, agricultural credit programs have maintained conservative credit policies.

Charge No. 5. The large public debt is the result of waste.

Through colorful and graphic presentation, the article attempts to give the reader the impression that the public debt has been caused by waste and inefficiency. As the staff analysis points out, the overwhelming portion of the debt in 1950, the last year cited in the article, was incurred during World War II. The wartime increase in the debt accounted for \$217,000,000,000 out of a total \$257,000,000,000 of debt outstanding in that year. However, the chart in the article simply indicates the level of the debt in 1939 and in 1950, omitting any reference to a war year such as the fiscal year 1946 when the debt reached the all-time high of \$270,000,000,000. For the five fiscal years since 1946, budget receipts have exceeded expenditures by a cumulative total of \$7,500,000,000.

Charge No. 6. There has been a startling increase in the peacetime spending of a few departments of the Federal Government.

Through some inaccurate figures, which the staff analysis corrects, the article attempts to show unjustified increases in peacetime spending from the fiscal years 1940 to 1950. For example, the facts show that the bulk of this increase in peacetime spending for the independent offices is in the Atomic Energy Commission, readjustment benefits and compensation and medical care for veterans of World War II, and the Selective Service System.

The revised estimate of 1952 budget expenditures stands at \$68,400,000,000, the highest level of peacetime expenditures in our history. However, the reasons for such a high

level can be readily apparent to anyone who will examine the evidence. The following table shows, by major category, the increase in Federal expenditures from 1940 to the recommendations for 1952:

Federal budget expenditures
(In billions)

	1940	1952	Percent of increase
Major national security programs	\$16	\$48.0	2,900
Veterans' services and benefits	6	49	720
Interest	11	56	460
All other	59	95	60
Total	92	204	650

Obviously, the largest increases have occurred in the programs related to past wars and the current defense effort. Expenditures for national security programs, which include the military services, foreign aid, atomic energy development, and stockpiling of critical and strategic material, and defense production and economic stabilization, have increased 2,900 percent while veterans' aid and debt interest have increased 720 percent and 450 percent respectively. During the same period, expenditures for all other functions of Government have increased only 60 percent. This increase in all other expenditures must be compared with an increase of 80 percent in the average salaries of classified Government and postal employees, 112 percent in construction costs, and 105 percent in the general level of wholesale prices.

Both the Bureau of the Budget and the appropriations committees of the Congress continually receive many proposals which, in broad generalities, advocate economy in Government. These proposals, however, are like the article in the Reader's Digest in that they seldom make any concrete recommendations, which would result in reducing specific items of expenditure.

You may be interested in the reaction of the Committee on Appropriations of the House of Representatives to these attacks. In its report on the general appropriation bill for 1951, the committee stated that—

"The press and radio have constantly reported claims by various agencies and individuals that the budget can be reduced by figures ranging to several billion dollars. Certain of these agencies have gone to the trouble and expense to publish brochures outlining their programs. These recommendations have been studied with a view to using such information as might be contained therein to effect reductions in the budget. However, without exception, they are written in such general terms as to be practically useless in effecting budget reductions. They discuss large reductions in broad areas of the budget without at any point naming appropriation accounts which should be reduced or giving specific data as to programs which could be curtailed.

"It is a very simple matter to say in a speech that Government expenditures should be reduced by \$3,000,000,000 or \$5,000,000,000 and in support of such statement to point generally at the large expenditures for national defense, foreign aid, grants to States, and so forth, but it is an entirely different matter to study the detail of the budget including cost of unavoidable services such as the postal service, and a review of outstanding commitments either by previously granted contracts, authorization or by operation of laws which result each year in fixed charges. It has been suggested that veterans' benefits be greatly reduced, but the merits of this proposal must be weighed by the legislative committees of the Congress if any attention is given it. So long as the veterans' laws remain as presently written, the Committee on Appropriations

has no choice but to recommend such amounts as are necessary to pay the benefits due. The amount appropriated is in no sense a control of expenditure and is only a judgment of the amount which will be required. None of those who advocated extensive reductions in the budget through press releases, brochures, etc., submitted any data to the Committee on Appropriations which would have been of assistance in effecting reductions. The committee was importuned from all sides for increases in appropriations and spent many days listening to the testimony of persons who desired appropriations for purposes not in the budget, but not one single witness appeared before the committee to suggest a program for reduction except in a few isolated cases where local interests opposed specific appropriations for local purposes."

The experience of the Bureau of the Budget has been very similar. There is no valid basis for assertions that vast sums of money can be saved by "eliminating waste and duplication." The big issues in Federal expenditure policy are program issues—programs which have been requested by the public and approved by the Congress. To reduce Federal operations substantially requires the major reduction in, or the elimination of, programs specifically prescribed by law.

I hope that this information, together with the attached material will serve your needs.

Sincerely yours,

F. J. LAWTON,
Director.

ANALYSIS OF CERTAIN STATEMENTS IN THE ARTICLE "IN WASHINGTON IT'S WASTE AS USUAL," WHICH APPEARED IN THE JULY 1951 ISSUE OF THE READER'S DIGEST

A THE UTILIZATION OF MANPOWER IN THE FEDERAL GOVERNMENT

The increase in the number of Federal Government employees between June 30, 1950, and January 1, 1951, is highlighted by the statement in the Reader's Digest article that civilian employees were added to Government pay rolls at the rate of 1,000 a day, and that during January the rate went up to 2,000 a day.

According to the reports of the Civil Service Commission, the net increase in Government employment during the period cited in this article was entirely related to direct operations of the Department of Defense. In fact, between June 30, 1950, and January 1, 1951, a period of rapid mobilization following the outbreak of the conflict in Korea, there was an actual decrease of 20,483 in the number of civilian Government employees excluding those in the Department of Defense. During this period the Department of Defense added 235,256 civilian employees but the increase in all agencies, including the Department of Defense, was only 214,773 employees. Approximately 63 percent of the added Defense Department employees were blue-collar workers—the type employed in arsenals and shipyards. The reduction in employment outside the Department of Defense was achieved even though there were substantial increases in defense-related activities of the civilian agencies, as, for example, the doubling of the staff of the Selective Service System.

During January 1951 the number of civilian employees increased by 60,944. Of these, 58,352 were in the Department of Defense. Approximately 63 percent of them were also blue-collar workers. The increase outside of the Department of Defense occurred principally in the Department of Justice, with smaller increases in the Treasury Department, the Panama Canal, the Selective Service System, and in defense activities of other agencies. Considering the entire 7-month period from June 30, 1950, to January 31, 1951, the number of Federal civilian employees outside the Department of Defense decreased 17,891 despite the added activities

carried on by these civilian agencies on account of the Korean hostilities and the mobilization program.

The allegation in the article that the average Government employee works 1,650 hours a year is in error. Fifty-two weeks of 40 working hours each would amount to 2,080 hours.

Until recently Government workers were allowed 208 hours of annual leave each year. Each employee is also allowed a sick leave "credit," on which he may draw in the event of illness, of 120 hours a year. Seven holidays are granted Government employees. Assuming none fall on nonworkdays this would amount to 56 hours. The minimum hours of work per year would be 1,696. However, based on recent studies, the average of hours worked a year is at least 1,797. This does not include any of the many hours of unpaid overtime work which the employees contribute.

Even though some accumulation of annual leave is permitted, employee loss of earned annual leave because of inability to take it is a common occurrence. The latest survey of Government leave practices was made by the staff of the Senate Committee on Appropriations. This study covered the first 9 months of 1947. It revealed that during this period employees took only 78½ percent of the annual leave they had earned. Since these 9 months included the normal summer vacation period, it could logically be assumed that a smaller percentage would apply for the entire year. But, assuming this higher percentage for the entire year, the average annual leave per employee would be 163 hours instead of the 208 allowed. The same study revealed that employees took an average of 64.2 percent of the sick leave they earned, or 77 hours instead of the 120 allowed. Because of the likelihood of a holiday coming on a nonworkday the average holiday hours are 50 instead of 56. If we add to the basic 2,080 hours 7 hours for the likelihood of the extra 1½ days in the year falling on a nonworkday and subtract the average time off of 290 hours computed above, we find that the average number of hours worked each year, exclusive of unpaid overtime, is actually 1,797 instead of the 1,650 alleged in the article.

In regard to holiday practices, a 1948 survey by the National Industrial Conference Board revealed that among all private companies surveyed, the average number of holidays granted was six and three-fourths, and the average among nonmanufacturing industries was eight and one-fourth. The Government's standard is seven holidays.

In regard to the Government's sick-leave policy the Senate Appropriations Committee report states, "It was determined that this policy is roughly comparable with that of over a dozen large corporations for the first year of employment. For employment of more than a year, comparisons are more difficult, the Government using a policy of accrued leave and most private enterprises, rather than doing this, using a more liberal sick-leave allowance."

In regard to annual-leave [vacation] allowance, the Appropriation Committee's report revealed that, at the time of the survey, the Government was generally more liberal than private employers. However, there are certain other factors involved in comparing Government leave practices with those of private industry. One of these is the fact that Government employees are not granted excused leave for death in the immediate family, other emergencies, religious holidays, or personal affairs. In a 1950 study for the Senate Committee on Post Office and Civil Service, information pertaining to practices on excused leave was obtained from 37 representative companies, employing more than 600,000 office workers. All 37 companies reported that they do grant excused leave in varying degrees. Six had established yearly limits ranging from 3 to 12 days, the median being 10 days. One had a yearly maximum

of 30 days. The remaining 31 firms did not have a yearly maximum, but granted excused leave to employees at the discretion of the supervisor. In Government all such leave is charged to annual leave.

Another factor to be considered in connection with the Government's annual-leave allowance is that Government employees are not covered by social security, unemployment insurance, or any type of severance-pay provisions of the type common in industry. In the past, employees who accumulated unused annual leave looked upon this leave credit as an additional protection in case of illness extending beyond the period of eligibility for sick leave, and as a substitute for unemployment insurance to provide income for a short period of time in case of termination of employment.

Leave rights of Government employees have been recently curtailed in two respects. Annual-leave allowance has been cut from the 26 days (on which the above computations were based) to a graduated basis, and the accumulation of unused annual leave has been generally prohibited.

The claim that the "Government employee gets 6 weeks more time off annually than the non-Government worker" cannot be supported by the facts. If the non-Government employee worked a 5-day 40-hour week, received 7 holidays, 15 days of annual leave, 10 days of sick leave, and 5 days of "excused leave" each year he would be working the same number of hours per year as the average Government employee.

The other claims in regard to money and manpower savings, based on the faulty figures as to the difference between average hours worked by Government and non-Government workers, are similarly in error. Even using the faulty statistics of the article, the estimate of 100,000 additional workers who could be added to the manpower pool if Government workers worked the same hours the article claims as the industrial standard is an overestimate of 38,900.

B. PROCUREMENT ACTIVITIES IN THE FEDERAL GOVERNMENT

That portion of the article dealing with procurement is based upon the report of the Williams Subcommittee on Overstaffing of the House Committee on Post Office and Civil Service. It emphasizes the apparent low production of employees preparing purchase orders and the allegedly exorbitant average cost of making small purchases in several departments. The fallacy in the cost figures quoted is due to the fact that they are "average" figures and are arrived at by simply dividing the number of purchase transactions into the total cost of making all purchases regardless of amount and applying the result to very small purchases.

There follows excerpts from the letter of December 28, 1950, from the Secretary of the Interior to the chairman of the Williams Subcommittee on Overstaffing. Although this letter had reference only to the charges relating to the Department of the Interior, the principles enunciated would be applicable to all departments.

"I do not agree, however, that the statistics of your report fairly support the otherwise unsubstantiated finding that procurement activities throughout the headquarters of the Department are wasteful. The statistics show that the average cost was \$9.95 for making each of 38,725 purchases having a total cost of \$383,770.867. The very same statistics also show that the average amount of each purchase was approximately \$13.90 and that the average cost per purchase of \$9.95 was therefore only seven-tenths of 1 percent of the amount of the average purchase. Further, in applying the so-called average cost per purchase order in the various bureaus to specific instances of very small purchases, the report creates the erroneous impression that a cost of \$13.78 was entailed to issue a purchase order in the amount of 32 cents, and that it cost \$13.39 to purchase a

50-cent magazine. The small purchase of 50 cents did not, in fact, cost \$13.39 and the 32-cent order did not cost \$13.78. Those average costs are statistically applicable only to the average purchase. Those average costs are no more validly applicable to the small purchase than they are to a companion purchase of great complexity and involving many thousands of dollars. For example, a purchase of equipment in one of the bureaus mentioned in the report involved an order in the amount of \$31,622 and required considerable work on a relatively complex purchase. It should no more be represented that this large purchase was made at so low a cost as \$13.39, the so-called average, than that the small purchase was made at so high a cost.

"In further reference to the publicized purchase of the 50-cent magazine, it should be noted that the original purchase order of August 15 was canceled on August 28, prior to the inspection of these purchase orders by your investigational staff, and the order thereafter consolidated with .6 other small purchases dating from July 3, 1950, to September 28, 1950. A single voucher was then issued in payment of the 17 small purchases in accordance with the procedure prescribed by General Regulation 103 of the Comptroller General. Thus, this Department has been castigated by the press, as well as the report, on a matter which is not only factually in error, but which represents misuse by the report of the statistics contained in it.

"The concern expressed by the committee over the production rate of 14 purchase order per employee possibly is based on a failure to take into account that the data on purchasing personnel included not only those issuing purchase orders, a very minor procedural step, but also those otherwise engaged in the total procurement operation, including the writing of specifications, the analysis of bids, the interpretation of regulations, and the awarding of contracts. My foregoing comments on average costs applies here as well."

It is recognized to be true that in Government as well as in private industry, the cost of processing orders of small amount is disproportionately higher than that of larger orders.

In the Federal Government, a concerted effort has been made to remedy this situation. Examples of these efforts may be found in the Task Force Report of the Government Operations Subcommittee of the Committee on Expenditures in the Executive Departments, House of Representatives. This report strongly recommends an extension of the so-called petty purchase procedure whereby small procurement—up to \$50—may be accomplished by on-the-spot cash purchase. To implement this recommendation, the Bureau of the Budget and the General Services Administration are cooperating with the General Accounting Office and the Treasury Department in amending the General Accounting Office-Treasury regulations so that agencies may take advantage of this improved procedure. Other evidence of this trend for improvement may be found in General Services Administration General Regulation No. 6, dated December 27, 1950, which prescribed a simplified short form of purchase order for small transactions, Standard Form 44.

The largest area for scrutiny in the field of procurement is in the Department of Defense. President Truman, in a recent statement to military and civilian officials in connection with the budget for military functions in the fiscal year 1952, stated:

"Passage of this budget will place tremendous procurement and spending authority in the hands of the Department of Defense and the three services. The schedules call for \$34,700,000,000 in hard goods from 1952 appropriations in addition to \$27,000,000,000 already available—a total of \$61,700,000,000 for equipment for our own forces,

To this will have to be added the military construction program, and the equipment needs of our allies. Again, I repeat that this is going to place a particularly heavy management job on the entire executive branch to see that we buy wisely, buy what we need, put what we buy to good use, and do the whole job in a way that does not weaken our basic economy."

The Subcommittee on Intergovernmental Relations of the House Committee on Expenditures in the Executive Departments has recently filed a report on Federal Supply Management (Military and Related Activities), a copy of which is attached. In this report, the committee makes numerous recommendations for the achievement of large economies in the field of military supply activities, which are being given careful consideration by the Department of Defense. Staff members of the Munitions Board, the Bureau of the Budget, and the General Accounting Office were assigned to assist the subcommittee in its work.

C. THE PUBLIC ASSISTANCE PROGRAM

With reference to the public assistance program, the Reader's Digest article stated that, "The President asks for one and a third billion dollars for public assistance programs—three times the average amount for 1943 to 1947. 'Why should this hugely augmented sum be needed for public assistance,' asks the New York Herald Tribune, 'when we are already in a period of unprecedented full employment, with severe labor scarcity in the immediate offing?'"

Federal expenditures for public assistance are determined by statutory requirement (42 U. S. C. 801-6, 801-6, 1201-6). The Federal Government is required to reimburse the States for their expenditures for public assistance according to a formula set forth in law. The determination of eligibility of recipients is within the authority of the States.

The President has repeatedly urged that the self-financed social insurance program, rather than public assistance, be made the principal vehicle for providing protection against poverty. He has expressed concern over the heavy dependence on public assistance.

In his 1951 budget message, in urging the enactment of improvements in the old-age and survivor's insurance program, he stated as follows:

"The coming year will be an extremely significant one for the Nation's social security program. The decisions of the Congress on pending legislation will determine the direction which this country will follow in providing basic protection against the major economic hazards of old age, unemployment, illness, and disability. It is my strong belief that it is a responsibility of the Government to provide this protection, and to provide it in a manner that is consistent with our ideals of independence and self-reliance—through the already established and tested principle of contributory social insurance. This was the basic philosophy of the Social Security Act, in which the major role was given to social insurance, financed mutually by employers and employees, with benefits available as a matter of right without a means test. Public assistance was given only a supplementary role to fill in the diminishing gaps in insurance protection.

"The effects of our failure in recent years to carry out this philosophy are already dramatized by the increase in the public-assistance rolls. Because the protection of social insurance is so limited and inadequate, far too many people have been forced to seek public relief. In some States, for example, half the aged people are on the relief rolls. Approximately 2,700,000 aged people and 1,500,000 dependent children now receive public assistance. By contrast, only 1,900,000 aged persons receive insurance benefits and 800,000 children and their mothers

receive survivors benefits under the old-age and survivors insurance system. Average old-age insurance benefits are only \$28 a month compared with average old-age public assistance benefits of \$45."

The subsequently enacted Social Security Act amendments of 1950, which raised the level of insurance benefits will, over the future, alleviate this situation. However, it is too early for the change in law to effect reductions in the scope of operations and in the Federal expenditures for the program.

D AGRICULTURAL PROGRAMS

With reference to the charges concerning the Department of Agriculture, it should be noted that wherever feasible, economies have been made throughout the regular programs of the Department. Progress in very desirable programs, such as the rural electrification and telephone and farm-housing programs, has had to be slowed because of the shortage of critical materials needed for the defense effort.

The President recommended that new loan authorizations for the Rural Electrification Administration be reduced from \$297,000,000 available in 1951 to \$109,000,000 in 1952. Expenditures for the program, however, will drop off less sharply, from \$312,000,000 to \$269,000,000. This is because more than \$240,000,000 of estimated 1952 expenditures will be paid from prior year funds to meet obligations already incurred by the Government.

Since Korea, agricultural credit programs have maintained conservative credit policies in order to support the program of voluntary credit restraint by private lenders and at the same time to provide essential credit where needed to maintain a high level of agricultural production.

Serious reductions in the activities of the Department of Agriculture may imperil an adequate supply of food and fiber products necessary to meet the needs of defense and of the essential civilian economy. The programs of the Department are designed to insure a continuing high level of farm production and to achieve the best possible adjustments in farm production by protecting and conserving our soil resources and maintaining an adequate level of research activities and essential services to farmers.

I THE PUBLIC DEBT

The Reader's Digest article gives the impression that the size of the Federal debt is attributable to "waste in Washington." This is accomplished by charting the debt beneath a dramatic title and by omitting any textual reference to the debt.

Public debt figures, or a chart picturing them, provide no basis in themselves for concluding that a government is or is not wasteful. A debt is merely a means for meeting current obligations when current revenues are insufficient. Conceivably, a nation with a small debt could be more prodigal than one with a large debt.

Generally, the size of a public debt is a rough indicator of the scope of a government's activities. This is illustrated by table I. It shows that the principal increases in the debt of the United States occurred during the First World War, during the 1930's when the Federal Government sought actively to pull the Nation out of the worst depression in its history, and during the Second World War.

Missing from the Reader's Digest chart is a line for the Federal debt as of the end of fiscal year 1946. This omission tends to convey the impression that the debt as it stood at the end of 1950 resulted from a steady, decade-long increase caused by "waste in Washington." Actually, the debt was at its highest point in 1946, and has decreased by \$12,000,000,000 since the end of that fiscal year. If a line for the year 1946 had been inserted, it would have shown the 4-year drop.

A line for 1946 would also have shown that the overwhelming portion of the 1950 debt—\$217,000,000,000 out of \$257,000,000,000—was incurred during the years of the Second World War. Captions indicating the beginning and end of the war would have permitted comparison with the debt increase during World War I, whose span is pointed out in the chart. Moreover, the inclusion of a line for 1946 would have permitted the reader to conclude that if the amount of debt incurred during the World War II years were deducted from the 1950 total, the 1950 debt would have been \$28,400,000,000, \$12,000,000,000 less than 1939, all other things being equal.

Actually, the figures for the gross public debt are somewhat higher than those carried in the article. The Reader's Digest figures, purporting to represent the Federal debt, actually represent the interest-bearing debt. The relationship of the latter to the gross public debt is indicated in table I.

The article neglects to state that, for the past 5 years the Federal Government has operated at a surplus of \$7,500,000,000 (table II).

TABLE I—Gross public debt and guaranteed obligations
(In billions)

End of fiscal year	Interest-bearing	Matured debt	Non-interest-bearing	Gross public debt ¹	Guaranteed obligations	Total ²
1964	\$1.4	(³)	\$0.4	\$1.8	—	\$1.8

THE UNITED STATES CHAMBER OF COMMERCE AND ITS STATEMENT ON FEDERAL EXPENDITURES IN JUNE

Chronically, there seems to be publicized a mass of misinformation and confusing propaganda about Federal finances in general and the United States budget in particular. This year the volume of such propaganda has probably been greater than ever before. To serve their own ends, special interest groups have intensified this perpetual barrage, apparently designed to mislead and confuse the public regarding the actual nature of the operations of our Government.

When an organization as large and influential as the United States Chamber of Commerce descends to adding to the accumulation of misinformation, it affords compelling reason to reiterate the true facts and make them more widely known.

The chamber's president, Mr. D. A. Hulcy, recently issued a statement predicting that in the closing month of the fiscal year 1951 there would be "one of the greatest scrambles in history to squander the taxpayers' money." He went on to state that "the shocking but obvious reason is that agencies want to get rid of all the money appropriated to them before the fiscal year ends, so that they will not have to return anything to the Treasury." The Nation is fortunate indeed that the facts do not bear out Mr. Hulcy's widely circulated prophecy.

He based his prediction on monthly trends of Federal expenditures for several recent years, using figures which were taken from the Daily Statement of the United States Treasury. A very brief examination of that statement for the month of June in any of the past several years shows that the obvious reason for the large increase in expenditures is that during that month the interest on a large part of the public debt falls due. Moreover, in June of 1951 expenditures for the major national security programs (such as the military functions of the Defense Department, the Atomic Energy Commission, and stockpiling of strategic and critical materials) are rising steadily as the defense mobilization program accelerates. Expenditures are increasing each month as the number of men in uniform grows and as increased deliveries of supplies and equipment are made. This increase in expenditures should be a source of satisfaction to all of us. It indicates that we are becoming militarily more secure in the present troubled world situation.

It is true that total expenditures in June were higher than for any other month in the fiscal year 1951. However, when interest payments and national security expenditures are deducted from the monthly expenditures for the year, it can be seen that expenditures during the month of June, rather than representing a spending spree, were actually lower than expenditures during each of eight other months of the fiscal year. This was also the case for the fiscal year 1950.

Another charge made by the chamber was that there is "an almost unbelievable jump" in spending on the last day of June. The reasons for the large amount of expenditure on the last day of the fiscal year are readily understandable. According to the Treasury Statement for June 29, 1951 (the last business day of the month), interest on the public debt amounted to \$758,000,000 and Veterans' Administration expenditures, almost entirely pension and benefit checks to veterans, amounted to \$228,000,000. These two payments alone totaled almost \$1,000,000,000 of the \$1,255,000,000 paid out on June 29, 1951.

Veterans' pension and benefit checks are issued on the last day of each month so that the recipients can receive them as close to the due date as possible. The concentration of these expenditures on the last day of June could be avoided by neatly stretching the payments of the checks over the entire month of July. This would result in a more even distribution of Federal expenditures, but would not save the taxpayer one penny. It would, however, result in needless delays for the veterans and their beneficiaries who have been promised these benefit checks by a Government that is grateful for the sacrifices they have already made for their country. As for the interest payments, not only are so many of them required to be made in June, but specifically on the last day of the month.

In general, it is both surprising and disturbing that this study fails to take account of these very elementary facts about the composition of Government spending at the close of the fiscal year. Mr. Hulcy and his research staff have used the daily Treasury statement and have ready access to the budget document. Their unsubstantiated charges and flagrant misuse of figures, there-

fore, raise serious questions as to either their competence or their sincerity. Mr. Hulcy is described by the chamber as a bookkeeping genius.

Monthly budget expenditures, fiscal years 1950 and 1951

(In millions)

Year and month	Total budget expenditures	Interest on the public debt	Budget expenditures excluding interest on the public debt	Major national security programs	Budget expenditures excluding interest on the public debt and major national security
1950					
July	\$3,431	\$322	\$3,112	\$1,465	\$1,647
August	3,585	125	3,460	1,540	1,920
September	3,965	544	3,421	1,393	2,028
October	3,111	255	2,856	1,319	1,537

An ordinary bookkeeper might hold his job by doing no more than adding figures accurately. However, one would expect that a bookkeeping genius would know the facts behind his figures before drawing any startling conclusions from them.

They Never Learn

EXTENSION OF REMARKS OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent editorial from the Wakefield (Mass.) Daily Item:

THEY NEVER LEARN

According to one Wakefield independent marketman there will be no beef in Wakefield this week end, at least so far as supply from one of the big sources is concerned. Government meddling, he says, will drive the meat into the black market.

As recent news stories from various parts of the country have shown, the beef situation is rapidly going from bad to worse—due to the incredibly confused problem created by present price ceilings and price-control policies.

For a considerable period of time, the number of beef animals which the established law-abiding packers have been able to buy has been far below normal, and far below the needs of consumers as well. Moreover, live-

stock prices—which are governed by rules so complex as to confound even the experts—have reached a point where in many cases, the packers who abide by the law must operate at a loss if they operate at all.

Something of a new high in the confusion was reached in the latter part of September when the Army found it couldn't obtain in the domestic market 13,000,000 pounds of dressed beef it needs.

A number of major packers informed the Army that they would be unable to put in bids. One reason, the packers pointed out, was that they couldn't get enough beef to handle the orders of their regular customers. Another was that filling the Army's big order, under present regulations, would entail prohibitive losses. Army officials announced that they would buy beef abroad if they couldn't buy it at home.

All in all, the beef problem has presented the Nation with a practically perfect example of how price and other controls always gum up the works, hurt the consumer and the reputable business alike, and create problems far worse and far more complex than the problems they are supposed to solve. Apparently the Government just hasn't learned the economic facts of life.

"Were It Not for the Far East Air Forces There Would Not be an American in Korea Today"—Lt. Gen. Walton Walker, United States Army

EXTENSION OF REMARKS OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, I am in receipt of a copy of an article entitled "Analysis," written by Mark S. Watson, military correspondent of the Sun papers.

Mr. Watson is no stranger to a vast number of the Members of both Houses of Congress. For more than 30 years he has been distinguished by the competency of his military articles on the Army, the Navy, and the Air Force.

During the war he was in the midst of action, both in the Philippines as well as in China, and because of his broad knowledge and acquaintance with the circumstances, and the people of the Far East—after the war—he was named a member of General Wedemeyer's mission.

No stranger to international politics, Mr. Watson was awarded the Pulitzer Prize in 1945 because of his distinguished accomplishments in international correspondence. This recognition was based not alone on the stories he had written on the war itself—but also on the political aspects of war as they projected themselves on the screen in the last critical years of the war.

He was engaged for several years in part-time work in writing the military history of the Army, and his book Chief of Staff—concerning General Marshall—is itself considered part of the official Army history.

It was in the light of that knowledge and with that background that Mark S. Watson wrote the article entitled "Analysis." The article itself is brief,

and yet with all it exhibits and pictorializes more real factual information than I have seen written with respect to Korea for some months past.

Mr. Watson develops two points which, he says, are more than coincidental. One is with respect to the recent announcements of the Air Force fighting in Korea; the other has to do with the tremendous amount of communistic war material damaged or destroyed on the ground by our own aerial fighters and bombers since July 1, 1951—28,000 road vehicles, 210 locomotives, 6,500 boxcars, 750 bridges, and 120 railway tunnels.

Mr. Speaker, those figures are almost unbelievable. Spelled out, it means that for each 24 hours of the 80 days which have intervened since July 1, 350 Red vehicles, nearly 3 Red locomotives, and more than 81 boxcars, 9 bridges, and 1 tunnel have been damaged or destroyed.

It is indeed no wonder that the ground force commanders in Korea—as Mr. Watson reports—"are well satisfied with this toll of aerial destruction, which has weakened the enemy's power of moving troops and ammunition against our own troops."

Mr. Speaker, Mr. Watson, in talking of tactical air support, states:

Dwindled enemy resistance of mountain positions of particular value is attributed to the fact that the enemy has lately had difficulty in moving larger bodies of troops into position and in supplying them with ammunition.

And certainly—

He continues—

an important reason for that pleasant situation is the battering which enemy lines have received from our tactical aviation since July 1, this year, railroad locomotives are unable to haul trains, railroad cars are short, bridges of all sorts are down, trucks and carts have been smashed, and great amounts of ammunition and other supplies which they would have carried up to the dumps are still back behind the Yalu River.

Mr. Watson in his discussion of the tactical Air Forces job points out that the Air Force has not one priority but three, any one of which may suddenly call for emphasis.

The first, he says, is to attain military domination of the air over a given area and on certain temporary occasions, absolute domination.

The second is to provide close support for our ground forces in their own operations, whether offensive or defensive. Superiority over the enemy air in this respect we still possess in Korea on a practically absolute basis. It includes continuous fire and rocketing of enemy units just in front of our own. It also prevents the enemy from doing it to us.

The third, he declares, is to isolate the battle area so as to destroy enemy trucks, bridges, and highways, as well as nearby supply dumps and rendezvous points, to the end that the enemy cannot for considerable time bring up reinforcements to withstand the attack of our ground troops.

The United States Air Force—

He continued—

has lately provided magnificent example of that sort of thing as the figures above indicate—and as our infantry's local successes have made evident.

Mr. Speaker, Mr. Watson's statement is so reminiscent of that short, concise declaration of Lt. Gen. Walton Walker, United States Army, when he declared:

Had it not been for the Far East Air Force, there would not be an American in Korea today

In order that all may read this splendid analysis of the situation in Korea since the time that the truce conference first met on July 10, 1951, right down to this day—I am asking unanimous consent to extend my remarks and insert in the RECORD an article entitled "Analysis," by Mark S. Watson, military correspondent for the Sun papers

That article reads as follows:

ANALYSIS

(By Mark S. Watson)

There is more than coincidence in two recent announcements of the Air Force with regard to the fighting in Korea.

One speaks of the mounting number of Red airplanes, mainly based in the sanctuary north of the Yalu. It has been a rapid growth since midsummer. The talk is of some 1,200 Red planes altogether, of which fully a third, and perhaps a half, are jet fighters, that is to say, new Russian planes, and good ones.

This certainly is not welcome news.

The other announcement speaks of the great amount of Red materiel destroyed or damaged on the ground by our own aerial fighters and bombers since July 1—28,000 road vehicles, 210 locomotives and 6,500 box-cars, 120 railway tunnels, 750 bridges, etc.

FIGHTING REFLECTS RESULT

There is added assurance that our ground forces commanders in Korea are well satisfied with this toll of aerial destruction, which presumably has greatly weakened the enemy's power of moving troops and ammunition against our own troops.

The result is apparent in the recent fighting. United Nations forces have driven forward for several miles through mountains which previously were almost impassable. They have encountered enemy resistance at company strength rather than the battalion and regimental strength of other days.

This divided enemy resistance at mountain positions of particular value is generally attributed to the fact that the enemy has lately had difficulty in moving larger bodies of troops into position, and in supplying them with ammunition.

And certainly an important reason for that pleasant situation is the battering which enemy communications lines have received from our tactical aviation since July.

Railroad locomotives are unable to haul trains, and railroad cars are short, and bridges of all sorts are down, and trucks and carts have been smashed, and the great amounts of ammunition and other supplies which they would have carried up to the dumps are still back near the Yalu River.

INVALUABLE SUPPORT

This has been of immeasurable benefit to our own ground forces. Gen. James A. Van Fleet has been able to continue his forward movement day after day, seeking for the most readily defensible line—that is, the ridges which, in United Nations hands, will permit control of the routes which the enemy must use in any later attack.

Groundwise, we are in very much better shape than we were when the Reds unwisely broke off the truce negotiations. Two other questions present themselves, however.

1. If the Air Force's tactical units have been so successful in lending this invaluable support to our ground forces, why have they allowed the Communists to increase so alarmingly the buildup of Red air units

along the Yalu? For if at present the Reds have only 400 jet fighters there—and that is the minimum guess—it still is appreciably more jet fighters than our Far East Air Force possesses.

2. And, although in open fighting of our free-flying jets with the Red jets ours are conspicuously successful. Our fighter planes escorting the B-29 bombers on their missions do not seem to fare so well in their own combats with Red fighters.

The answer to the latter question is simple, our escorting planes have one outstanding duty—to protect the bombers and let them perform their assigned mission of bombing enemy installations, they cannot leave the bombers to engage in duels of their own.

That is why the bombing by our 29's on enemy installations has been so successful, but it also is why our escort planes, thus handicapped, have not done an outstanding job of killing enemy attackers; their first duty has limited their chance to maneuver for the second duty.

TACTICAL AIR FORCE'S JOB

The answer to the first question calls for an understanding of what a tactical air force is supposed to do. It has not one priority but three, any one of which may suddenly call for emphasis. The three outstanding missions are these:

1. To attain relative domination of the air over a given area—and on occasion a temporary but absolute domination of it. This domination makes it much easier to carry out the other two missions. Incidentally, this absolute domination of the whole Korean theater was ours until fairly recently, and may become so again.

2. To provide close support for our ground forces in their own operations, whether offensive or defensive. Superiority over the enemy air in this respect we still possess in Korea on a practically absolute basis. It includes continuous fire and rocketing of enemy units just in front of our own. It also prevents the enemy from doing it to us.

3. To isolate the battle area, that is, to destroy enemy trains and bridges and highways, as well as nearby supply dumps and rendezvous points that the enemy cannot for a considerable time bring up reinforcements to withstand our attacks. The United States Air Force has lately provided a magnificent example of that sort of thing, as the figures above indicate, and as our infantry's local successes have made evident.

SO REDS EFFECT BUILD-UP

Mission No. 3 in brief has been given top priority since mid-July and mission No. 2 has been carried out as well. But this, plus the assignment of fighter planes to escort our bombers, has fully occupied most of the tactical Air Force equipment we have in the Far East, leaving few planes at the moment for performance of mission No. 1.

As a result, the Reds have been fairly free to effect their own build-up, engaging voluntarily in so few combats that their losses have been infrequent. Their MIG 15 fleet has undoubtedly risen above 400, and until we send additional jet fighters to the Far East to reduce the enemy, we will suffer.

The size of our own comparable jet fighters—slower planes but apparently piloted by better fighters—is not officially announced, but it is well known to be very much smaller than 400.

One of these days there will be a shift in the three priorities, and possibly a concentration of all the Far East Command's available jet fighters on what is given above as mission No. 1. When that time comes, it is likely that the Reds' large numerical superiority will be considerably reduced. But that time will be determined by the current requirements in the other two missions.

It also will be determined in some measure by the speed with which we manufacture our new jet planes and send them to Korea. The present work stoppage in American aircraft plants, especially those which make jet engines and parts for them, are certainly doing nothing to speed the building up of our Far East Air Force, which very much needs jet fighters to make up the existing deficit.

Address of Hon. Reva Beck Bosone Before the National Reclamation Association Convention at Amarillo, Tex., October 18, 1951

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. MURDOCK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to insert the splendid address given by Hon. REVA BECK BOSONE, of Utah, before the National Reclamation Association convention at Amarillo, Tex., on October 18, 1951. The address is as follows:

I bring to you the personal greetings of the President of the United States and the message that he appreciates and favors a small water-projects program.

Earlier this month it was my privilege to discuss this program with President Truman at the White House. I found him well aware of the need for such a program and definitely opposed to duplication of effort, and anxious to see a workable plan put into operation.

He appreciated the fact that the States were willing and eager to accept the responsibility of the projects, fostering them from inception to conclusion; appreciating also that the role the Government would play would be confined to that of loaning a part of the money needed to carry on the work.

Thinking in the executive branch relative to the agency which will actually handle the money transaction is not quite clear. The National Reclamation Association proposal would have the Department of the Interior pass judgment on the engineering and economic aspects of a small project and also make the loan. There is considerable hesitancy about putting the Department of the Interior into the lending business for these projects.

An alternate idea which is being explored now is to have the Department of the Interior pass upon the project and certify it to the RFC, which is a lending agency. Certification to RFC by the Interior Department would be tantamount to a directive to RFC to make the loan. There are things to be said for and against that idea, but I think it well worth exploring.

Another idea is to have the Interior Department pass judgment upon the project and certify to the Department of Agriculture which is a lending agency. Certification to Agriculture would be tantamount to a directive. The executive branch is considering it.

So I can report that executive reaction to the objectives of the program are quite favorable but that there are still many questions which will have to be considered and answered.

A great many problems have developed since representatives of the National Reclamation Association, the Department of the Interior, staff men of the Interior and Insular Affairs Committee and I worked on the bill which is now known as H. R. 2646, the small water projects bill or the "little fellows" reclamation bill. The problems chiefly range about methods of fitting this program into existing governmental structure. I would like to be able to say that we are over the hump on this, but I am not that optimistic.

While there has been an evidence of what some might call a jurisdictional dispute, I think the problem is much deeper. We hope and believe we can work out a solution on a plane much higher than that of jurisdictional argument.

I have given a lot of thought to this legislation. I have tried to analyze it from all angles. I have tried to pick out the items which might be controlling. Then I have analyzed each item to see just how important it might be in determining just how small projects would fit into the governmental structure. Here are some of the questions I asked myself.

How does this program fit in with existing programs in various departments?

Is the fact that some departments lend money and some do not a major point?

Does the size of the project in acreage or in dollar value mean that one department or another has a better claim on the program?

Does the number of farm units in a project offer any key?

Should rehabilitation projects be one place and new ones be in another?

How sacred is the ninety-eighth longitude?

Does farmstead water and irrigation water concepts offer a point upon which we can separate water programs?

How can small projects fit into a program of State responsibility?

How will it fit with the Hoover reports?

I can assure you that there are many things to be considered. That is why I urge the National Reclamation Association to remember that there may be jurisdictional differences, but they are based on something more than just departmental whims.

Let me point out to you what I consider some of the fundamentals of the problem.

I think we should begin by admitting the existence of conflicting legislation. The Reclamation Act was passed in 1902 and has been amended. The Water Facilities Act was passed in 1937 and amended under the title of Case-Wheeler Act in 1940. Reclamation is under the Department of the Interior and the water-facilities program is administered by the Department of Agriculture. These two acts come into direct conflict. It is true that there has been no evidence of this conflicting legislation because the respective officials of the Department of the Interior and the Department of Agriculture have been content to the existence of a "no-man's land" or neutral zone which has gone far in preventing actual collision. The \$100,000 limitation of the water-facilities program and the fact that Interior did not like to deal with projects of less than a million dollars, plus a studied effort on the part of both Federal agencies to avoid competition—these things which have kept the conflict in the legislation concealed—are more or less set aside under the terms of a small water-projects program. There is possibility of conflict there, not necessarily because of the two Federal agencies but because of the laws which establish conflicting programs. I will discuss this in more detail a little farther along in this talk.

In addition to that, we have the big soil conservation program which has been carried on by the Department of Agriculture for many years. Its work has been varied and its

field of operations has been Nation-wide. It has not been limited in its activities to the 17 Western States as have the reclamation and the water facilities programs. The National Reclamation Association should not overlook the part which the Soil Conservation Service might play in this matter.

After realizing that we have conflicting legislation, I think we should appreciate that there is evolving in this country a national water policy. This policy is much later in development than the water policy of the various Western States and in many instances it is quite different from our western way of doing things. We must understand, however, that this national policy is just in the making—that it will be a long time crystallizing, but that every bit of water legislation we pass now (and some legislation which does not pertain to water) will either help mold this national policy or will be held to the pattern of national policy.

The third thing we must appreciate is that there is a definite trend toward reorganization of the Federal departments and agencies to eliminate duplication of effort, under the Hoover reports or under some other system which will lead to efficiency and toward economy—we hope.

The fourth major item we must remember is that we who call for State rights must also be willing to accept State responsibility and that the Federal Government must be included in most of our plans but should not be expected or allowed to dominate the relationship.

Now against that background of conflicting legislation, evolution of a water policy, the trend against duplication, and the recognition of States' rights and responsibilities, we must consider our small water projects bill.

Let us revert to the reclamation, water facilities, and the soil-conservation programs. Analysis of the water facilities activities and scrutiny of the reports on the activities indicate the water facilities has two clean-cut and readily definable programs—(a) farmstead water and (b) irrigation water.

I do not think that we can have any argument about the farmstead water program being within the realm of agriculture. Farmstead water is water for the farm house, the barns, the stock. It can also include by definition the water from the irrigation system which reaches the land of the individual farmer. The utilization of farmstead water is clearly in line with the activities of the county agent and the home demonstration agent, and I think are so clearly agriculture that there is no trace of conflict.

But I think we should scrutinize carefully the entrance of the Department of Agriculture into the field of accumulating and distributing irrigation water. That is exactly what is done under the "irrigation" unit of the water facilities program. I shall not go into detail with you on this matter because I know you realize that the securing of water rights, the building of dams, the construction of distribution systems are by nature engineering rather than agriculture and, therefore, should not be confused with agriculture. The utilization of water by the farmer is agriculture. The line of demarcation is clear. Accumulating and distributing water is engineering up to the time the water goes through the measuring box of the individual farmer. Then it becomes agriculture. I believe that principle is fundamental.

Because we are in the process of making a national water policy, and because it is this very thing which will lead to jurisdictional conflict over the small water projects bill, I urge the National Reclamation Association to give some thought to the distinction between farmstead water and irrigation water.

But among the many facets of soil-conservation operations are such things as drainage

and earth moving. It is entirely possible that the soil-conservation program may be the heavy artillery for those who believe that small water projects belong in the Department of Agriculture. The issue may well be between reclamation and soil-conservation and not between reclamation and water facilities.

Therefore, it is incumbent upon NRA to take a long look at soil conservation, analyze its functions religiously and see whether or not small water projects are more closely related to that program than to reclamation. This might be a controlling point. Look into it carefully.

Here are two more things which I think you people should consider carefully. Irrigation is going east. In fact, it has gone east. More and more farmers in the rain belts are learning that it pays to have water available at the right time. It may be some time before there are any really big irrigation systems in the East, but I am positive that if a small projects bill is passed, eastern water users will soon begin to try for projects under it. I think the time has come to re-examine the 17 Western-State limitation of the Reclamation Act, at least as far as small projects are concerned. In the past you have been opposed to extending the Reclamation Act itself eastward and you may still be, but I think the small projects plan should cover the entire Nation.

Now I know when I make that recommendation that there will be those who will say, "The Bureau of Reclamation has no organization east of the Mississippi and the Soil Conservation Service has. Therefore, the Soil Conservation Service should handle these projects east of the Mississippi." I do not subscribe to that policy at all. I see no point in having a program operated by one agency on one side of the river and another agency on the other side of the river.

Another thing is the matter of the 160-acre limitation. I am not going to say anything about that except to state that the query came up in many of our informal meetings, particularly with the Bureau of the Budget. You know much better than I what the NRA policy should be on that.

So much for the relationship of reclamation to water facilities. Now let's take a look at the relationship of small projects to our national water policy.

I believe that from now on any water project constructed will first be viewed in respect to its relationship to basin-wide development. But we do not all agree on just what kind of basin development we should have.

There are those who believe that the pattern set by TVA should prevail—that it should be a federally controlled basin authority. Then there are those who believe that basin authorities should be State controlled. In only a few instances, however, will geography permit a single State to have complete physical jurisdiction over a river basin. The most notable example of this is the Central Valley of California. But the cost of developing the basin-wide Central Valley project was too great even for a rich State like California. So we must reconcile ourselves to the proposition that the cost of the project and the interstate character of most streams eliminate State control of basin projects.

We turn, then, to a third type of basin authority, that which is being developed in the Colorado River Basin. This is one in which the States, by their ability to get together and apportion the benefits of the river, have beaten the Federal Government to the punch, so to speak, and have an organization which has made itself a factor in any plan to develop the river, and which has a definite status under the laws of the respective States and of the Federal Government.

May I just state here that there may be circumstances under which the States of a

river basin may want to have a larger share in the management of the watershed of the basin, but I shall not dwell on that here.

I know that all of this talk of basin authorities may seem far afield from small water projects, but I am certain that the type of small-projects program that we have will affect the type of basin development we have.

It is entirely possible that the pattern set by the Colorado River compacts may be basic in the evolving of a water policy for the country and for the development of the various river potentialities on a basin-wide scale. The Colorado River pattern is not only one of Federal-State relationship but of State-State, State-basin, and basin-Federal relationship. State responsibility is a keystone in the Colorado River pattern. We must maintain the concept of State responsibility in the small water projects program, not only for the good of that program but also because it will help fix the concept of State responsibility in our national water policy.

I close now with the reminder to you that the President of the United States favors the objectives of the small water projects program, and with my own comment that the National Reclamation Association give serious thought to the fundamental problems involved, that you remember that America is evolving a national water policy, that you should make no compromises for expediency's sake but arrive at conclusions by objective analysis, that you consider the line of demarcation between farmstead water and irrigation water as one of the chief control points in determining the part the respective Federal agencies should play in water development; that the duplication of effort in this matter be resisted; that the concept of State responsibility be religiously adhered to, and, finally, that NRA seriously consider the proposition that the time has come, as far as small projects are concerned, at least, to extend the reclamation idea to the entire Nation.

There can be no growth, no civilization without water. It is truly our lifeblood. To guard it for our future growth and for future generations is essential. Our thinking about the utilization of water must be clear, our motives must be pure and unselfish. You of the National Reclamation Association are the leaders in all this. Your past record your present interest, our future hopes, place a tremendous burden on you for leadership. We shall depend on you.

Toughest Problem

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include a recent editorial from the *Everett (Mass.) Evening News-Gazette*:

TOUGHEST PROBLEM

Retailers face some tough problems these days. And the current squeeze on their always modest profits is just about the worst.

When Congress renewed the price-control law, it added some amendments which, it was believed, would allow retailers and all other businesses concerned to keep their pre-Korean profit margins, and to pass on the many increases in costs over which they have no control. But these amendments

lacked clarity of language and, according to OPS, they apply only to manufacturers and processors, and to new retailing regulations but not to the old ones. Thus, OPS contends, retailers can be forced to absorb many price increases.

This puts the retailer in an impossible situation. His pre-Korean profit margin was the result of years of competition in a free market. It is, for the most part, the smallest profit that will permit of good service and progressive store operation. It averages only a few cents out of each sales dollar.

Worst of all, if OPS is determined to follow a policy of profit control—and there are plenty of indications in this direction—the whole economy of the country will be threatened. That certainly was never the intent of Congress. That policy comes straight out of the Socialist ideology. It would disrupt industry and trade—and undermine the economic strength of the Nation, perhaps irreparably.

Highly Significant of What Our Top Military Leaders Are Thinking Is Expressed by Gen. Omar Bradley, the Chairman of the Joint Chiefs of Staff, When He States "The United States Must Win the Air War Before It Can Win a Ground and a Sea War"

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, noted for his predictions—under the caption of "Peace or War"—is a paragraph in the *Washington Merry-Go-Round* in which Mr. Drew Pearson states:

General Bradley, who made his fame as a foot soldier, will go all out for air power. With Admiral Fechteler, the new Chief of Naval Operations, reviving the old Navy-Air Force rivalry in a United States News interview—not cleared by his boss, Secretary Lovett—the Bradley speech is sure to make headlines.

America has probably no greater soldier or more skilled military administrator than Gen. Omar Bradley, United States Army. The "big dog" under Eisenhower, beloved and respected for his driving power and abilities, he earned the recognition of all his fellows as being a great military strategist.

Known as a good commander, he was highly respected and loved by the men in his command, and, despite his West Point origin, is nationally known to American soldiers everywhere throughout the world as the soldiers' general.

When Gen. Omar Bradley speaks, the Congress of this United States listens. All who know him recognize that his speeches are not a soldier's talk of military conquests—as much as they are those of a most advanced student of Christianity—telling of his love of peace. In every talk that he makes, one finds an air of spirituality far more suggestive of the theologian than of a great military leader and authority.

That all may read what Drew Pearson recently had to say of General Bradley—by and with the unanimous consent of my colleagues—I am extending my remarks and including therein the following short statement entitled "Peace or War?"

PEACE OR WAR?

(By Drew Pearson)

Gen. Omar Bradley, the top Chief of Staff, will make a significant speech advising the Nation on how to stay strong enough to insure peace.

In the speech, General Bradley, who made his fame as a foot soldier, will go all-out for air power. With Admiral Fechteler, the new Chief of Naval Operations, reviving the old Navy-Air Force rivalry in a United States News interview, not cleared by his boss, Secretary Lovett, the Bradley speech is sure to make headlines.

For the officer who once commanded the Army's Fort Benning Infantry School and has spent his life with ground forces plans to warn that the United States must win the air war before it can win a ground and sea war.

Bradley will say that the airplane is still the primary means of delivering the A-bomb both against cities and enemy troops; will reveal that baby A-bombs carried by fighter planes are more effective than atomic artillery; that large atomic bombs carried by B-36's are more effective than guided missiles; and will point out that air power must be planned and purchased several years in advance.

Accordingly, the Chief of Staff will favor a 143-group air force. Bradley, who is one of the most idealistic men in the Armed Forces, regretfully plans to warn the Nation that real peace with Russia isn't likely.

Socialized Housing

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the *Record*, I include the following editorial from a recent issue of the *Malden (Mass.) Evening News*:

SOCIALIZED HOUSING

Government restrictions on private housing will result in less than a million privately constructed homes being built this year, compared to 1,300,000 in 1950. To take up some of this slack, Congress is moving to authorize the Government to erect at least 50,000 residential units of public housing. The administration wants authorization for 75,000 units. Public housing has a tax fund of \$338,000,000, out of which it can subsidize the rents of socialized housing. That has a tendency to keep rents down and to discourage investment in rental housing. At present there are 167,000 public-housing units in the United States eligible to draw subsidies. They are occupied by low-income families supposed to be unable to find satisfactory privately built dwellings. Other low-income families not in public housing help to pay the rent of those who are, through taxes. A survey has revealed that approximately 10 percent of families living in public housing are chiselers with ample incomes to afford private homes. If there ever was a

plausible argument for public housing, it is vitiated when the Government fails to kick chiselers out of these units. Public housing has become another of those typical bureaucratic operations in which the taxpayer shoulders the load of the bureaucrats' political friends.

What Practical and Valid Conclusions May Safely Be Drawn From This Report?

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. MURDOCK. Mr. Speaker, under October 2 date line, the Honorable CLAIR ENGLL, of California, had a news release of great interest especially to irrigation farmers of central Arizona. The Congressman's statement is based upon a report he had received from the United States Geological Survey in the nature of replies to 24 questions concerning water conditions and resources of that area in central Arizona covered by H. R. 1500. Fortunately, Congressman ENGLE extended his own remarks in the CONGRESSIONAL RECORD under date of October 5 and included this news release, which extension was printed in the Appendix of the Record for October 9. I say fortunately this statement was printed in the RECORD and thus given wider circulation for whatever scientific validity and practical value this United States Geological Survey report may have. It is to be earnestly hoped that the engineering information of this report is correct, is practical, and significant, and that Congressman ENGLE has drawn practical and logical conclusions therefrom. As to this latter I am in great doubt. Let us examine both the Engle news release and the United States Geological Survey report on which it is said to be based.

The first two sentences of Congressman ENGLE's release are amazing statements and are quoted as follows:

Arizona has enough water in underground storage basins at the present time to supply the farms within the proposed central Arizona project for a full century.

The United States Geological Survey recently issued a report which stated that more than 60,000,000 acre-feet of water are now stored in the underground basins of central Arizona.

These two statements are amazing statements if true in a practical and significant sense. I only hope the presence of water in that area is not like that with the Ancient Mariner: "Water, water everywhere, but not a drop to drink."

If we may believe there are 60,000,000 acre-feet of water easily available for practical pumping under the area covered by the central Arizona project, that, is indeed joyous news. Now, such a

quantity of water may be there, but I am worried about its availability for human use. For that matter some such quantity of water may be in the atmosphere over that area as determined by mathematical calculation going up into the stratosphere in computing the percentage of moisture or humidity. Many illustrations of the presence of water in physical or chemical combination could be given, but I think of one in which moisture is present but not available for drinking purposes.

My son, as an engineer, is engaged in the treatment of perlite ore. He grinds up this volcanic glass material and heats it properly so that it pops like popcorn. I asked him why does this ground glass material pop and expand this way under heat. He said it is because of the moisture in it. Now, there is a mountain called Picket's Post near where I live in Arizona which is composed largely of this type of rock, and accordingly, it must be that there are tons of moisture in that dry, hard volcanic rock lying there blistering under the Arizona sun. Yet I am positive that a humming bird on an August afternoon trying to get a drop to drink could not get a beak full from that rock. In other words, a whole mountain of water would be entirely unavailable to the beak of a humming bird. I can also believe that in a certain cubical content of earth material right under Phoenix, Ariz., there is a great volume of water, but that it is not necessarily available in that amount for the use of man.

Geologists speak of underground aquifers bearing water and discuss the nature of the earth mass as to its permeability and its capacity to store water. I frequently ask geologists to tell me about the underground storage capacity of certain areas and also how much water they may contain. Such is useful information, even guesses and estimates, but such is not always full and complete practical information. When we wish to know concerning an aquifer or water-bearing layer of underground storage, the first question is how much water could it hold and then how much water is actually there and available to be withdrawn through pumps, and then we want to know most what is the safe annual yield from that aquifer, depending upon the replenishability of that underground supply. If there is little or no replenishability for it, the underground supply actually present may not mean much for very long to the use of man on the surface. All of these facts must be carefully considered. I have a feeling that Congressman ENGLE, to prove that central Arizona need not import Colorado River water has given the last one—the replenishability of that supply under the Phoenix area—too little consideration.

We must carefully distinguish between storage capacity and actual storage. The rotunda and dome of this Capitol Building undoubtedly is large enough to store \$20,000,000,000 in gold, but that does not mean to say that there is now present in the rotunda and dome that amount of gold. In considering underground water

supply for human use it is highly important to ask not only how much is available to be extracted, but more particularly how much is perpetually available through renewable annual supply which may be counted as safe yield. When the statement is made that there is enough water to serve the central Arizona area for a full century that statement taxes the credulity of the farmers on that land who have so many dry wells. If such a time estimate of underground water storage is at all valid it must assume a very definite replenishment. Such replenishment of aquifers in other areas, such as the Los Angeles area of heavier precipitation might properly be counted on although the same replenishment may not be counted on for aquifers in the hot and semiarid region of central Arizona.

Congressman ENGLE later in his news release states that this report from the United States Geological Survey substantiates the testimony of California witnesses, and cites the statement of Mr. Clay Elder before our committee, as recorded on page 972 of the hearing, on H. R. 934, part II, on Friday, June 3, 1949. Mr. Elder is quoted as follows:

Beneath the central Arizona project and within a certain economic pump life of, say 200 feet and not over 150 feet long-time average, there is a ground-water reservoir still nearly filled with water in spite of years of drought and pumping. Its capacity is at least 45,000,000 acre-feet, or 50 percent greater than the total capacity created by Hoover Dam at Lake Mead.

I presided over the committee at the time that Mr. Elder made that statement in his testimony, and I noticed that I was not the only member of the committee amazed by the statement. The gentleman from New Mexico, Congressman MILES, showed his surprise and I myself could only gasp and say: "I hope the witness has good X-ray eyes." The engineer disavowed having good X-ray eyes and declared that he arrived at his conclusion that there are 45,000,000 acre-feet of water under the central Arizona project by simple mathematical calculations on available data. Similar testimony was given by another California engineer before a Senate committee. Now the fact that those men are eminent engineers would naturally lead one to give credit to their statement.

The California engineers referred to, have given long study to the South coastal basin in California which contains the Los Angeles area. One of them has given careful reports on the underground storage within definite limits in the Los Angeles area and on his eminent authority has stated definitely the storage capacity, the safe annual yield, and most such pertinent data. The pertinent data certainly includes the average annual precipitation which in that Los Angeles area lying next to the Pacific Ocean is several times greater than the semiarid region in central Arizona. Could it be that these gentlemen have carelessly applied mathematically the water-storage data pertaining to the Los Angeles area to the Phoenix area on which they have given their testimony? I have many and grave doubts,

as just indicated, concerning the availability of underground water as testified by California engineers for the distressed areas for which H. R. 1500 and S. 75 are intended to give relief.

A great fallacy into which California witnesses may have, and probably have, fallen is to get confused on theoretical underground supply based on mathematical computation of storage capacity instead of figuring accurately and positively how much water is available through replenishment by nature in safe annual yield. To illustrate:

Oil and water are both pumped from underground storage but we know that when an oil field has been discovered and estimated at, let us say, 600,000,000,000 barrels—which might be in volume about the same as the 60,000,000 acre-feet of water, which Mr. ENGLE says is under the Phoenix area—we do know that we can pump out some of that oil and then we call the field exhausted. We are told that with all of our engineering we cannot get nearly all of the oil that is known to lie in that field. We also know that once what oil is there has been pumped out it will not be replenished. Now there are certain water pockets and basins where the water has been stored through geologic ages that could be pumped until the supply would be exhausted, and that is exactly what we want to avoid doing in a land such as central Arizona where there is such slight rainfall and only very meager replenishment. Statesmanship required a careful guarding of the supply pumped from such water storage and a limitation placed on such pumping to be within the limits of safe yield. That is what Arizona is now attempting to do before it is too late. While all of this is true, the fact remains that central Arizona needs to get what water belongs to her out of the Colorado River in order to insure the State's economic future.

After all, how much does it matter as a point of right and justice, how much water is under Arizona when she asks for what rightfully belongs to her out of the Colorado River? If Mr. ENGLE had a million dollars in his home bank and \$100 in his billfold and a big bully got possession of that billfold, Mr. ENGLE would undoubtedly organize a sheriff's posse—if necessary—to repossess that billfold in spite of his large balance in the bank. Arizona likewise wants what is hers.

Valuable as the information is in this United States Geological Survey report and glad as I am to have it, I feel that it is of such a complicated and technical nature as to require careful interpretation by experts before valid conclusions may be drawn from it. This water question is far too hazardous a matter, being of very vital importance to Arizona, to jump to conclusions. This report, instead of proving that Arizona needs no water out of the Colorado River, to my mind confirms the need of it when the report is properly considered. Congressman ENGLE is entitled to use this official information just as much as he is entitled to ask for it, but I am unwilling to accept his interpretation of the report and I believe my colleagues will also view it with caution and ask for a more scientific interpretation.

Everyone Is So Unhappy Today

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following letter from a constituent:

Hon. ANGLER L. GOODWIN,

House of Representatives,

Washington, D. C.

DEAR CONGRESSMAN. I hope you will forgive the liberty I have taken to write you.

Everyone is so unhappy today—I mean the small unnoticed workingman. All my friends are complaining along with my husband and I—they say maybe we should write our Congressman, but they never do. I thought as we had had correspondence with you before I would make the first step.

You have always been a good Congressman for Massachusetts and I sincerely hope you were one of the men who voted against the new increase in income tax.

My husband has always worked hard every day. We have gone without lots of things in this world, just to buy a home and raise a boy and girl to be good Americans, but how can we hope to have good believing sincere children when everyone is grumbling about this and that. I think we all have a right to grumble too because all we hear is "tax on this—tax on that, send billions more to foreign countries." Why are we sending so much when we people here are really feeling the shortage of the dollar?

I am enclosing three clippings which I have found very interesting and feel are pretty awful to know what is going on.

I hope you don't think I am just a crabby cranky person and probably the only one who feels this way because I am not. If you would want to hear from all the people who are my friends and feel the same way they will write.

I am only an obscure mother with a boy and a girl whom I have taught since they were babies to love their God and country—someday maybe my son will have to fight for his country. All well and good, but please, sir, while you are in Washington, please see if you can get more men to start thinking of our boys and girls.

Stand up and speak up all the Congressmen for Americans.

Thank you for all your past courtesy.

Sincerely,

MARY M. WESTBERG

(Mrs. Clarence M. Westberg).

EVERETT, MASS.

WASHINGTON REPORT

(By Fulton Lewis, Jr.)

WASHINGTON.—The generosity of American taxpayers in rebuilding foreign merchant fleets should cease as of now.

Besides selling at bargain rates 1,113 surplus merchant vessels to foreign countries, United States taxpayers have financed through the Economic Cooperation Administration almost \$150,000,000 of repair work to rehabilitate merchant and fishing fleets of foreign nations. There are additional millions that have been handed over indirectly in payments to foreign shippers for hauling United States-produced ECA goods to their own countries.

In addition, we have shipped to ECA countries thousands of tons of steel plate and other material earmarked for production of other machinery, but some of which undoubtedly went into shipbuilding. Similar aid is now being extended to North Atlantic Treaty countries under the guise of making those nations strong militarily.

There is no question but that the hundreds of millions of dollars poured into foreign shipping has had a beneficial effect on the economies of the recipient nations. It has been so effective, in fact, that a number of them can now afford to use steel plate and other materials for building ships for the Soviet Union.

Denmark, for instance, is now constructing 8 trawlers for Russia; Belgium is building 5 cargo ships and 7 trawlers; Italy is constructing 2 passenger-cargo ships; Sweden 12 trawlers and 2 tankers, and the Netherlands is building 3 cargo ships, 6 tankers, 10 whalers, and 2 suction dredge hulls—all for Russia.

And just to forestall the usual denial from the State Department, copies of Shipping World are being sent to Secretary of State Dean Acheson. The publication lists the shipbuilding-for-Russia activity on the basis of data furnished by the ECA countries doing the building. This will be one time, at least, when Acheson won't be able to say he can't find any reference to it in his files, and, therefore, it isn't so.

NATO countries under the shadow of Soviet guns will be the beneficiaries of some \$6,000,000,000 more of United States taxpayer money that has been voted by Congress. We are also turning over additional fighting and cargo ships to practically any nation that steps up with its hand out. We will also send tanks, guns, and machine tools to NATO countries who plead that they do not have the steel for constructing the weapons and machines in their own countries. But they do have the steel for constructing ships for Russia. And what they are doing in effect is to take steel from United States consumers so they can collect a pile of Soviet gold.

Ever since 1946 the administration has treated foreign shippers as preferred customers. In the past 3 years alone, the ECA has shipped about 25,000,000 long tons of materials to foreign lands on foreign merchant ships. In addition, 56,000,000 tons of ECA cargoes have originated outside of the United States that have been shipped on foreign cargo vessels, at ECA expense. This is hidden aid to foreign merchant ship-lines that does not show up on the accounting sheet as direct aid.

Italy, for one, has received \$19,700,000 in direct cash to help rebuild its merchant fleet, plus steel and other material for repairing and rebuilding damaged vessels. But Italy now has enough material to build two passenger-cargo vessels for Russia.

Where Italy and the other ECA and NATO nations get the cash to build ships for the Kremlin is another interesting story. Taking Italy as an example—and it's the same story in any ECA country—it works like this:

An Italian merchant or manufacturer pays his own Italian Government for the cost of ECA materials shipped into Italy for him. The money is put in a separate fund, a so-called counterpart fund, from which Italian firms can borrow to construct ships, factories or machinery or for other worthwhile projects—and then export the goods to other countries.

Counterpart funds, naturally would not exist in the first place were it not for United States exports. So the end result is that it all comes from the pockets of United States taxpayers, and whether we like it or not, ECA and the State Department officials sit on their hands while United States money builds ships for Russia—ships that may already be hauling supplies to Chinese Communist troops in Korea.

INSIDE LABOR

(By Victor Riesel)

NEW YORK.—It won't be a cold war for the Sovietized Chinese troops in Korea this onrushing winter. They'll be warm—snug in uniforms, socks and other garments sewn of cloth supplied them by the Japanese, because a coalition of Tokyo businessmen

and unions want to do business as usual with Red China.

Furthermore, most of these Nipponese textiles will be spun from raw American cotton bought from areas of our country which also contribute their share of dead, maimed and missing GIs.

I have before me a copy of a memorandum from Tokyo's International Trade and Industry to all Japanese businessmen, officially approving trade with our enemy. These businessmen, backed by politically powerful Nipponese unions eager to keep their people at work, may now send Red China as much chemical textiles as the Peiping government can pay for in American dollars.

At the same time, the Japanese can ship as much cotton thread, cotton cloth, staple fiber thread, staple fiber cloth, staple fiber cotton, rayon thread and rayon textiles as the Chinese can barter for with coal, salt, talc and other materials.

These other materials are the raw stuff which Japanese merchants want for low cost production—so they can compete with industries in high-wage lands across the world.

Very clever businessmen, the Japanese

Here are the actual remarks of one of their Nipponese radio commentators who plugged for business as usual with Mao Tse-tung's government—Kobashi, by name. He got on the air in Tokyo on September 21, the day the Japanese Government restrictions on Red trade were lifted, and broadcast to his listeners that

"Some persons in the Secretariat of the Ministry of International Trade and Industry consider that on this occasion restrictions on trade with Communist China should be relaxed somewhat, because Communist China wants to buy Japanese textile goods Japan expects much from the raw materials of Communist China."

He then sourly explained that, of course, there'd be complications because cotton thread and cloth are considered strategic war materials—and that much of the textiles sent to Red China will be made from American raw cotton.

Tons of this raw stuff are pouring into Japan—bought up from American brokers who have had no reason not to sell to a nation with which we made peace with such fanfare.

Restrictions on American sale of this raw United States cotton to foreign buyers were lifted by our Commerce Department on September 17. Eleven days later the Department added soft and hard cotton waste and used cotton now may, also, be exported to most countries under general license without prior application to the Office of International Trade.

However, Secretary Sawyer's experts did add that these shipments to the U. S. S. R. and its satellites and to Hong Kong and Macao, Portuguese, will continue to be restricted and require export licenses.

Now, here is what happened immediately in Japan. On September 17, the American Supreme Headquarters, which receives its advice on these nonmilitary matters from the other branches of our Government, dispatched a memorandum to the Japanese Trade Ministry saying that it will no longer be necessary for the Japanese Government to get permission from the Supreme Military Commander for the export of seven types of textiles to Communist China.

Well, 4 days later, on September 21, the Japanese Government also approved this trade with Red China—the first of many such moves, it can be predicted.

Of course, the Japanese officials restricted such items as cotton tire cord, parachute and balloon material, viscose rayon tire cord, and cotton sail cloth. For which, thanks. But what the Nipponese did immediately after that was announce that exports to Hong Kong "will no longer require emergency item import permits of the Hong Kong

government and buyers letters of guaranty as in the past."

Which means the Japanese can ship what they want of this material to the gateway to south China. From there it is only a short run by land or a swift 2-hour sail by sea to the Red factories turning out the uniforms for the troops of our enemy.

OUR CHILDREN

We like the thoughts expressed by Judge John J. Connelly of Boston juvenile court, in a recent speech, when he said that America's zeal in trying to protect the little children of foreign nations threatened by the ravages of war could result in the serious neglect of our own youngsters at home. These children, he pointed out, are just as much the victims of the disruptive forces of war and crisis as those of other countries. We call them our "most priceless possessions" and the "hope of the future," but sometimes we do not pay sufficient attention to their plight in our anxiety to see that the rest of the globe doesn't suffer. We owe it to them to make them our chief concern and offer them every possible protection in the uncertain days to come. There are some people who are more attracted to distant vistas than to what is going on about them. We must not allow our very closeness to our children to obscure their needs.

How Our Best Reclamation Project Might Have Been Killed 50 Years Ago

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, October 10, 1951

Mr. MURDOCK. Mr. Speaker, Bureau of Reclamation officials and certainly the congressional delegation from Arizona regard the great project in the Valley of the Sun surrounding Phoenix, Ariz., the State capital, as Uncle Sam's first and most successful reclamation project under the Federal reclamation law of 1902. It is almost ready to celebrate its golden anniversary, the Roosevelt Dam having been started in 1903, which is one of the half dozen great storage dams now serving that project. It has been a remarkably good investment of about \$25,000,000 of Uncle Sam's money, a fact well known today, but it might easily have been prognosticated another way at the turn of the century.

About the year 1900, the irrigation farmers in central Arizona who had pioneered in small reclamation projects found themselves in great distress, for a very unusual drought condition prevailed there in 1898-99, although they had had some raging floods several years previously. In 1896 the great pioneer who fathered the National Reclamation Association, George H. Maxwell, a native of California, but who spent the major part of his life in Arizona, called a national convention of like-minded citizens to meet at Phoenix, Arizona Territory, for their national meet. Maxwell did this to show that remarkable valley as an object lesson illustrating what individual efforts can do with water placed upon fertile land and also to reinforce his own idea that such great contemplated proj-

ects should be done by the national effort. The dry years before the turn of the century gave point to his contention that the flood waters must be conserved behind great dams such as he envisioned then and which are there today. Of course, the key structure was to be about 70 miles northeast of Phoenix at the junction of Salt River and Tonto Creek where a great V-shaped reservoir could be built.

The canyon walls at that point of juncture made perhaps the most ideal site in the Territory of Arizona—outside of the Grand Canyon—to locate such a storage dam. There was much discussion among the Arizona farmers just a half century ago about the benefits which would accrue from the building of a great dam at that point, but George H. Maxwell had impressed them with the need of national legislation and national engineering and national financing to get it accomplished. If the owner of the splendid site had determined on a development by an individual or corporation and had opposed in Arizona and at Washington the work being done by the newly created agency under the reclamation law of 1902, we would have had a very different story. How could such opposition have been effective? Well, using a modern technique very recently devised, it could have been done like this: Influential lobbyists and not disinterested witnesses could have come before Congress with about the following argument: "Gentlemen of Congress, they say this key dam will cost \$5,000,000. Bureaucrats always underestimate and it will probably cost four or five times as much. Undoubtedly the Government will spend not less than \$25,000,000 during the next half century. The law says that the capital investment shall be repaid, but it is interest-free money and only the principal will be repaid if at all. The dam probably will not last 50 years and even though the capital cost might be returned, think of the interest cost to the American taxpayer. Why, gentlemen, \$25,000,000 put out at 4 percent interest compounded semiannually in 50 years would amount in interest alone to nearly \$200,000,000. It is doubtful whether there is that much assessed wealth this year of 1901 in the whole political unit, the Arizona Territory. Gentlemen of Congress, do not be so foolish as to sink \$25,000,000 out in that desert and load a debt of interest cost of about \$200,000,000 over the first half century on the backs of the American taxpayers."

Well, what is the situation today? First, Roosevelt Dam is standing there today as good and more useful than when Theodore Roosevelt dedicated it in 1911. In addition to this key dam six other dams have been built to aid its highest function. It is true that the Federal Government has invested about \$25,000,000 during the 50 years just passed in this total project. The interest cost has been considerable, but it has been more than counterbalanced by the income-paying revenue arising out of the project. Although that interest cost properly computed would be less than the \$200,000,000 which the opposition might have figured. The wealth that exists based upon this project is far in excess of \$200,000,000.

even at its lowest assessment. The internal-revenue collector in Phoenix advises us that for the past several years the total Federal income tax arising out of and based upon the wealth created by the project amounts to upward of \$75,000,000 annually. We have not had a Federal income tax during all of the last 50 years, but the income-tax revenue arising out of this project during the last 3 years has more than counterbalanced the computed interest cost that might have been held up by the opposition to frighten away such Federal investments.

Cold figures cannot tell the full story. Let anyone who surveys this rich and productive valley in Arizona, including Phoenix and many surrounding towns, with their modern improvements, their civilization, and their culture, decide for himself whether this initial investment begun a half century ago and extended in feasible steps through the intervening years was a wise or foolish investment.

Give the People an Honest Choice

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BUFFETT. Mr. Speaker, today the preservation of the United States as a land of freedom is in the balance. The outcome depends on the vitality of the two-party political system. Historically this system has given the American people adequate opportunity to control their destiny.

The first responsibility of the party out of office is to expose the mistakes and to oppose questionable policies of the party in power. For 20 years that opposition duty has rested on the Republican Party.

Unfortunately the Republican Party has recently failed this primary responsibility. In 1940, 1944, and 1948 our presidential campaigns were like sham battles. Our issues consisted of pompous platitudes and "me-toolism"—even though those elections involved the blood and treasure of the American people.

Many people detected the humbug of those campaigns. Although the people were unable to effectively protest the failure to draw the real issues, they sensed the fact that the campaigns were without live issues.

Many people knew that the decisive factor in American affairs was the foreign policy which was involving us in trouble or war everywhere.

Many people knew that domestic policies were determined by foreign policy.

Many people saw that if the Republican Party gave them no alternative in foreign policy, the election was a sham battle, and a mockery of the two-party system.

Mr. Speaker, I am proud that I have never been infected by this evil germ of "me-toolism." In Congress from 1943 through 1948, I opposed the administration's blundering abroad with all the ability at my command.

For example, along with others, I drew up a constructive protest against the criminal policy of unconditional surrender. We put that protest before the Roosevelt administration. We were trying to see the war won so that permanent peace would result. Now unconditional surrender is recognized as the greatest mistake of World War II.

I voted against UNRRA because I believed it would not work out to the best interests of my country. We know now that it was an arsenal for communism.

I worked and voted against the Bretton Woods give-away of American billions. I did not think the American taxpayer could or should be forced to carry the nations of the world on his back. Events have demonstrated the failure of that scheme.

I voted against the British loan. I felt it would be used to finance and build up socialism in England. That is exactly what followed.

My vote has been steadfastly in opposition to the foreign policy—a succession of blunders that today has American boys dying in vain and futile war against the people of Asia.

Mr. Speaker, I am proud of my record thus far in the Eighty-second Congress. My opposition to the deadly militarism, inflation, and socialism of the Truman administration has not been simply in words or speeches.

I have voted against the gigantic spending that threatens the financial foundations of this Republic.

In 1951 I have voted against more expenditures than any other Member of the House or Senate. It was a lonesome stand on some of those occasions. There was only one Member besides myself who voted "No" on the colossal \$57,000,000,000 military appropriation which incidentally did not include the specific Korean war funds.

Of course I worked against and voted against the 1951 tax increase that puts a cruel burden on the backs of every American who earns his own way.

"The power to tax is the power to destroy."

Present taxes by themselves will, if continued, destroy our liberty in a few short years. These taxes make it impossible for the average American to save enough to assure his future security. The individual who is not economically free and strong cannot preserve his political freedom. The ration card in Russia is proof of that.

I have given the people of my district an honest choice. My voice, my influence, and my vote have opposed to the limit foreign intervention, inflation, and creeping socialism.

Is Universal Military Training Necessary?

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include

the following broadcast over the American Forum of the Air, Sunday, September 23, 1951, by Erle Cocke, national commander of the American Legion, and myself, on the question, Is Universal Military Training Necessary?—

ANNOUNCER. Good afternoon. It's time again to join the American Forum of the Air, dedicated to the full and public discussion of all sides and of all issues vital to you and your country.

This afternoon the American Forum of the Air presents a discussion on the vital topic, Is Universal Military Training Necessary?

Here with us this afternoon to discuss this problem are Erle Cocke, Jr., national commander of the American Legion, and Congressman DEWEY SHORT, of Missouri, ranking Republican member of the House Armed Services Committee.

And now, here is your moderator, who 23 years ago founded the American Forum of the Air, Theodore Granik.

Chairman GRANIK. The hot and cold war in the Far East heightens the problem of keeping an adequate supply of trained military manpower ready for any emergency. A presidential commission is considering a program of universal military training as the backbone of our national preparedness.

Today the American Forum of the Air explores a few of the issues; how Congress must tackle them when the Commission plan is proposed. Do we need UMT for our national survival? Will it lead to a military control of our civilian life?

First a question for the National Commander of the American Legion, we won World War II without UMT. Why do we need it now when we are not actually fighting a global war?

Commander COCKE. It is true we are not fighting a global war yet, but it is certainly to the interest of the American public to be prepared. I think we are probably 30 years late in the passage of UMT as we stand now. We have been in Korea for some 15 months now, and we still have nothing on the credit side in terms of preparedness. You must realize we came lots closer in World War II to losing than most people realize, and the reason was because it took us so long to prepare and to give a man a chance of survival prior to the time he was used in combat.

Chairman GRANIK. Congressman SHORT.

Congressman SHORT. As much as I admire my good friend, Erle Cocke, who is one of the outstanding National Commanders of the American Legion, I cannot agree with him on the question of the necessity of universal military training. The reason I cannot accept this discarded, outworn, European system is because every nation or major country that has ever had it has been led down the road to war and defeat. Germany, Italy, and Japan had it, and look where they are today. France, by building the Maginot Line, thought that her army was impregnable, was led into a false sense of security, and universal military training and service certainly did not save Poland.

I think it is one of the most dangerous things that this country could adopt, because as the Commander has admitted, not only did we win World War II, but also World War I without universal military training, and the countries that did not have universal military training suffered far fewer casualties than those who did have it.

Chairman GRANIK. Do you feel it would be dangerous to do what the Congressman said?

Commander COCKE. Let us think back whether we won or lost now. Let us look at it from the individual point of view, particularly those who were actually in combat in world wars; had they been given a better chance of survival through being given a standard basic military training, they would have produced a better spirit of the type that took longer to produce in World War II and made it last longer. I think all people

will agree today that what this country should do is to try to invest in the future, and I know of no better investment in the youth of this Nation than to be sure he is well prepared for the conflict he may go into.

Chairman GRANIK. Congressman SHORT.

Congressman SHORT. Yes, but the point is, whenever you adopt universal military training, you are adopting the old method that has been tried and that has always failed. History is on our side. To be thoroughly prepared for war is to be disposed to war. You cannot build up these instruments of power without somebody wanting to use them. I want to quote the late Jan Smuts, that elder statesman of Britain, the grand old soldier and former Prime Minister of South Africa, when he said—and some of us had the pleasure of meeting and hearing him—"while the great powers are allowed to raise conscript armies * * * it would be vain to expect the lasting preservation of world peace. If the instrument is ready for use, the occasion will arise, and the men will arise to use it. I look upon conscription as the taproot of militarism. Unless that is cut out all our labors will eventually be in vain."

The commander does know as well as I do that many of our forebears and best citizens only a few generations ago came to this new world to escape the tyranny of the old, and to get from under the heel of a militaristic despotism. We certainly could not want to establish the system which we have spent so much in treasure and blood to destroy.

Chairman GRANIK. Commander Cocke.

Commander COCKE. The Congressman is very distinguished in his representations and is an outstanding member of the House Armed Services Committee in which he hears many of these arguments pro and con daily. I tell you quite frankly the statements that Von Ribbentrop reported to Hitler in 1939—his ideas from official documents—were like this: "The United States will never be able to land in Europe because of their unpreparedness." Then General Jodel at the same time, who was chief of military operations to Hitler, made this statement: "The preparation of the United States is so insignificant that we will never have to fear them at any time." Those types of ideas I think contradict your preceding statement.

Congressman SHORT. I think they are the strongest argument for the position I maintain because in spite of that, the United States did land in two wars, because free men can always outwork, outproduce, and outfight slaves.

Commander COCKE. All right. Look at the present situation in Korea. You have been in there some 15 months, and you have lost 82,000 people. Had you had a system of basic military training, a universal structure in being any time after 1945, you probably would not have had the conflict, No. 1, No. 2, you would have had replacements prepared to go into Korea and do the job for which Americans have certainly been courageous always in the past in every war.

Chairman GRANIK. Would the existing conflict have been avoided?

Commander COCKE. Yes; I think our strength would have been at such a level that they dare not expect us to go in.

Congressman SHORT. With all the military might and power of Germany and Fascist Italy and the Tojo Japan, it did not prevent war. Mere military might will never prevent it. We should not place all of our hope and eggs in one basket or depend on might and materialism. When you adopt universal military training, the preponderant or whole emphasis is upon might and material, rather than moral force and spiritual strength.

Chairman GRANIK. Commander Cocke.

Commander COCKE. Let us put it this way. Let us be practical about it. You say when we are going to adopt UMT—You were present at the same time I was, when the bill as signed in June and became law,

Public Law 51, that actually created a system of universal military training for which there has been a Presidential commission working on it since that time.

Congressman SHORT. At that time, let us get this clear once and for all. Universal military training is not the law of this land.

Commander COCKE. Hasn't it been passed and signed?

Congressman SHORT. No, sir. It cannot become the law of this land until Congress takes positive, affirmative action. What has happened is that the American Legion, patriotic as you are, and the Defense Department, for 30 long years, have been trying to cram down the throats of the American people a system of universal military training that is wholly contrary to all of our best traditions and all of our history. The Congresses have repeatedly refused to pass universal military conscription.

Taking advantage of the hysteria of the moment, of the crisis in Korea, you tack onto an extension of the draft last April a bill, a rider that had no business being in there, and many of the Members of Congress who voted not for UMT, but for merely a commission to study and report a plan to Congress, did it with their fingers crossed, their tongues in their cheeks, and a silent hope in their brain and a prayer in their hearts that this thing would never become law. It was a cowardly act for Congress to try to pass the buck to the Executive.

Chairman GRANIK. Commander Cocke.

Commander COCKE. Speaking for the American Legion, we certainly hope your prayers are never answered, because we need a UMT program in this country, and we believe the National Security Training Commission that will report very shortly now will bring in a program that will give you what you want.

Chairman GRANIK. Would you put a limit on the UMT program, say 5 years?

Commander COCKE. The present law makes a 6-month's basic training period and 7½ years in reserve.

Congressman SHORT. It is not the present law. The gentleman is confusing the public, and the press has carried on this subtle propaganda, trying to make American people think we have UMT now. We do not have it, and we will not have it if the American people will be alert and vigilant and rise in their might and with courage express to their representatives in Congress their opposition to this foreign and discredited system.

What we did last June was to pass Senate bill 51, and the only reason that UMT was tied in with the extension of the draft, which all Members of Congress favored, we know under present conditions we had to extend the draft, we voted for these huge appropriations for defense, we are not against adequate preparedness. We are against universal military training or peacetime conscription because we think instead of making us strong, it will make us weak. But the Congress voted to set up a commission by the President to report to us within 4 months, before October 29, some plan or scheme for universal military training. We are told that it has been finished, but it has not been made public. It has not been made accessible to me. I am still in the dark. I do not know what is in the plan. But the Congress will have 45 days, particularly the Armed Services Committee of the Senate and House, to consider that plan when it is submitted, and made public, to either accept in toto, to amend in any fashion we might like, or reject altogether, and I hope we reject altogether.

Chairman GRANIK. Do you have any idea what is in the plan?

Commander COCKE. Yes, we have a good idea what is in the plan, mainly because the American Legion has been fortunate enough in its long 30-year program, to keep up with it. We have been invited to participate be-

fore that committee composed of Dr. Comp-ton, former Senator Wadsworth, Will Clayton, and General Ray McLean, as well as Admiral Kincaid.

Chairman GRANIK. Give us a preview.

Commander COCKE. Yes. We have the idea that this service of some 6 months, not to include any type of GI bill training, because we do not feel that the man who serves just 6 months is entitled for a long-range benefit, although at the time he is in the service as a veteran, he does not get veteran's status, but we do think he should be taken care of in an insurance way, and anything that occurs to him in terms of disability that that disability be protected, and handled while he is in the service.

In any case, he has a disability while going through training, he will be referred to probably the Department of Labor, because we certainly do not feel he has veteran's status, and should come to VA.

Chairman GRANIK. Is the Commission coming out with any of these thoughts?

Commander COCKE. We made our recommendation to them. We certainly hope they will follow them. We believe that will also help those that make the opposition to UMT look so bad because of its cost. We are trying to show people that \$30 a month as provided in the present Public Law 51 when UMT was passed, and that will come at a time when a man is through high school or at a time when he is 20, to give him a chance to come at a time when it least interrupts his life.

We still believe that a man when given a basic military education as he goes through high school, he gets an education, it is just as much authority in this country to give a person a chance of survival as it would to give him an education.

Chairman GRANIK. Would not a permanent UMT program make it easier for the young man to plan his life? Most are worried about being drafted now.

Congressman SHORT. Of course, the uncertainty that hangs over the youth of America, and the insecurity they feel is one of the most disturbing things they face. If you adopt UMT they will know what their plans are. They will be put in a strait-jacket even at a 6 months training, which is really too short to become effective, and then they will be subject to call for the next 7½ years, 3½ years in the ready reserve, 4 years in the stand-by reserve, or the Government will have claim on him from 18 to 26 years of age, interfering with his normal education or vocational training, and delaying his marriage and creation of a home.

Chairman GRANIK. Commander Cocke.

Commander COCKE. Don't you think the Government had the claim on a lot of people in the last 10 years on the same basis in which they left them out—

Congressman SHORT. They certainly have.

Commander COCKE. Don't you feel it is fair that it be universal and as many people share in the same responsibility of Government and defense of it?

Congressman SHORT. The Government has had that claim, and we all admit we have to run those risks and suffer these sacrifices in time of war, but I don't want it to become a permanent peacetime military policy of this Nation.

Let me ask the Commander this: He will admit that the draft is only temporary, and that this UMT is permanent.

Commander COCKE. That is correct.

Congressman SHORT. He has mentioned the cost. No one can predict with any accuracy the actual cost of this ambitious program.

Commander COCKE. I am glad you brought that out.

Congressman SHORT. But we know with a million young men becoming 18 years of age annually—

Commander COCKE. Eight hundred thousand.

Congressman SHORT Eight hundred and fifty thousand qualifying—the cost is going to be enormous. Now, then, because of that tremendous cost for UMT, it is going to weaken your Regular Military Establishment or forces in being. It will have to take money away from our armed services to train these kids for 6 months. After they are trained 6 months, put in the Reserve, and in case war should break out later, they are called back and what good would they be? They would have to go right back and take the training all over again to acquaint themselves with new weapons, because modern wars are not fought with individuals with rifles, but combat teams. The most important and hardest part of the training is that, I say it will be a waste.

Commander COCKE Wait a minute. There is one idea learning to ride a bicycle or swimming. When you once are taught to ride or swim, you know how to do it any time it comes up. That applies to basic training. A man can come back to uniform and immediately pick up military life if he has once been exposed, and brought into that type of life.

To answer your long question there just preceding in terms of benefits, I think you will find that the benefits, No. 1 is the training of the individual, No. 2, is being sure that you have a pretraining level in which you raise not only the Guard, but the Reserve, and the third idea is that that frees the Regular force so that the Regular Establishment can be utilized for the purposes for which we have already maintained an armed force, and the fourth, it gives us that trained manpower pool, personnel pool, that can be called upon. When you have the draft, you have people only listed. If you have UMT, then you will have people not only listed, but trained.

Chairman GRANIK You feel it is healthy for American boys to spend that period?

Commander COCKE Very much so, very healthy.

Congressman SHORT Mr. Granik, the question we are debating is, Is universal military training necessary? I say it is not necessary, because of the presence of the selective-service law, which is meeting all of the requirements in our present crisis. Every young man between 18 and 26 is subject to call. Even if UMT were desirable, now is no time to enact it, because if you did enact it, you would have fewer combat soldiers for active service.

Commander COCKE No. You are certainly stretching the argument on that point. We have never envisioned that UMT would ever change the present structure. Sure we need replacements in Korea. I don't know anything there that draws more attention than the statement the other day on morale, that no man that spent last winter in Korea would have to spend next winter there. If it keeps on going, you have to have trained manpower somewhere, and you yourself admitted that selective service is only temporary.

Congressman SHORT Doesn't the Commander admit that all the sponsors and advocates of UMT admit frankly that it cannot be put into effect until the present crisis is over?

Commander COCKE Yes, but there is a great deal of machinery, and you can face it. Chairman GRANIK In a moment, we will take questions from the audience.

I see Congressman ROGERS in the audience. Do you have a question, Congressman?

Congressman ROGERS My questions are addressed to Commander Cocke.

Commander, in the event that the UMT program is adopted, don't you think that the facilities of the universities and colleges should be utilized, not only in the interest of training the boys, but in the interest of economy?

I address this to you because I know how my colleague, Mr. SHORT, thinks on this be-

cause I introduced an amendment to the bill which he accepted. What do you think? Commander COCKE I think honestly everyone in this country realizes that the educational standards we have through the colleges and universities have been a great asset. If you drafted every man today under the temporary law we presently have you would find that the Armed Forces would probably send about half of them back to college anyway.

So the idea of keeping the college institutions open is an absolute necessity and UMT should certainly and can utilize their vast facilities in terms of structures already in being.

Chairman GRANIK Congressman SHORT.

Congressman SHORT Mr. Granik, certainly I think we should make the maximum use of all existing facilities in behalf of economy, but if I remember the original plan of the American Legion, they wanted the full 4 years' training, and while they wanted to integrate universal military training with a natural normal academic education, they know it is very difficult, if not next to impossible, to do that.

You can't train men to sail a ship or to run a tank or fly a plane on a college campus. If you are going to have universal military training, it must be military or it is no good at all.

I don't want to see you try to get by through surreptitious tactics, and certainly I know you wouldn't want to do that.

Commander COCKE You are the one that is practicing it, I think.

Chairman GRANIK Gentlemen, shall we take another question?

Question My question is for Representative SHORT:

What effect would putting the emphasis upon atomic weapons, as proposed by Chairman McMAHON of the Atomic Energy Committee, have on UMT?

Congressman SHORT Well, no doubt it would have a great deal of effect, although I think you have to have air, ground, and sea forces to win a war. You have to maintain a proper balance. But because of the rapid change and unexpected changes in modern warfare, I think perhaps increasing emphasis will be placed on our Air Force and our naval arm.

Chairman GRANIK Commander Cocke.

Commander COCKE I think Korea has pointed out one thing—we still don't have push-button warfare, and you have to have ground men to occupy space.

Congressman SHORT I agree with the Commander wholeheartedly on that. The old foot soldier always will have to march in and take over and hold the ground.

Chairman GRANIK I see a lady in the audience—

Question My question is addressed to Commander Cocke.

From your travels overseas, do you believe that universal military training will give more courage to our friendly nations and help toward an honorable peace for all nations?

Commander COCKE There is no doubt of the fact that passage of UMT would greatly help to strengthen our foreign position. We have had a changing policy from time to time and people have not understood that we are going to be prepared. We have stood out to be the police force of the world, and we must have the policemen.

Chairman GRANIK Do you think it will strengthen our world position?

Congressman SHORT I think it will weaken it instead of strengthening it. I might say that I too have gadded about a great deal in Asia and Europe and Africa, and I think many of the nations and peoples of the world are afraid that we have lost the offensive to Russia in our fight for peace. What they are scared of is that we are becoming more militaristic and imperialistic and if we pass the UMT, "There you go, the

white man is trying to exploit the hordes of Asia."

Commander COCKE Haven't the American people demonstrated that is not their purpose in practically every war and conflict we have had?

Congressman SHORT Certainly from our own point of view we have, and I think in truth we have. It is not what we know we have done, it is what the world is going to think we will do.

Chairman GRANIK Gentlemen, we have another question from the audience.

Question My question is for Mr. Cocke: How might a youth benefit by the UMT program?

Commander COCKE The individual?

Question Yes.

Commander COCKE No. 1, the individual will be given a chance for survival. He will be given basic military training so when his time comes to be utilized in the defense and protection of this Nation, we will have given him the best possible education this Nation can give him in terms of military and personal survival.

Congressman SHORT On that point, I want to say this. If we are to improve the education, health, and morals of our citizens, it must start from birth, and not when boys reach the age of 18. That is too late to form habits and attitudes to continue throughout life.

If America ever reaches the point when we will have to depend on the Armed Forces to take over our sons at the age of 18 to teach them the common virtues of patriotism, honesty, and morality, then heaven have mercy upon our Republic.

There are some people, I know, who are for UMT because they would like to escape the responsibilities of parenthood.

Commander COCKE I assure you that the American Legion today in trying to have universal military training adopted is delighted that we passed it in principle through the Congress. We certainly believe that the findings of the President's Commission will come forth and clarify many of the problems you have raised.

Chairman GRANIK Gentlemen, we just have time for the summaries. Congressman SHORT, your summary.

Congressman SHORT We do not now have universal military training as a law. It is simply a report to be submitted to the Congress by a commission that has been appointed. I think that universal military training is unnecessary at this time because the draft meets all of our requirements. Even if desirable, it could not be effective, as has been stated by Mrs. Rosenberg, by Mr. Baldwin, and by General MacArthur and other well-known authorities.

I believe that taking young men of America from the church and school and the home and putting them in a segregated group at the age of 18 where the moral and spiritual surroundings are not conducive to the building of the best character is not what this country wants.

I want to agree with Dr. Hutchins, the former chancellor of the University of Chicago, now with the Ford Foundation, when he said:

"It stands to reason that though free and independent citizens make the best Army, the Army is not the best place to make free and independent citizens."

Chairman GRANIK Thank you, Congressman SHORT. Your summary, Commander Cocke.

Commander COCKE To summarize, I think everyone today fully realizes what we face in this country as well as abroad. We believe that universal military training is a chance for the individual, and I come back to that thought, as I brought out three times on this program, for the very ample reason that individuals can be made into the type of fighting force we need, but we cannot be made into that fighting force if we start

late. We have started late in every war we have ever been in. It is true we have finished every war on top. But how close can we come? Can we gamble again?

We believe in the framework of the national-defense effort built on the universal military training program as well as on a long-range reserve program that will last 7 or 8 years, so people will know why they fight and what their responsibilities in this Nation are as citizens, and as such, can more than justify themselves as citizens by their service to their Nation.

So those are the thoughts and feelings that we have and we believe that universal military training is the means by which this can best be accomplished for our Nation, and certainly it can be when this report is filed with the Congress, and I believe that the Congress will pass it regardless of what the Congressman says.

Chairman GRANT. Thank you, gentlemen. You have been listening to a discussion on Is Universal Military Training Necessary? Our speakers have been Erle Cocke, Jr., national commander of the American Legion and Congressman DEWEY SHORT, Republican, of Missouri.

Report to the People of the Tenth Congressional District of New York

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mrs. KELLY of New York. Mr. Speaker, the first session of the Eighty-second Congress is now history. Time, in history's long perspective, will tell its true story. But—right now—American citizens are interested in its accomplishments, its aims, attempted and realized, and the parts played by its individual legislators in bringing this about. I feel that I owe my constituents an account of my stewardship. To that end I present this report.

We hear the Eighty-second Congress called the Congress of investigations, the billion-dollar-spending Congress, the Congress which abolished the penny post card. All of these epithets we acknowledge and say—the investigations produced some good, the billions spent are a bulwark against the deadliest foe humanity ever faced, and the departed penny post card went the way of the five-cent cigar in an inevitable sacrifice on the altar of a diminishing dollar. Call it what you may, I feel that history will place its accomplishments on the credit side of the ledger.

There is no reason to explain the dire situation this world faces. With all the evidence presented to us daily in our press, our radio and television, we Americans are aware of this crisis. Freedom is threatened as never before in history, for the evils undermining us are masking as good and throwing the dust of suspicion on every real good in the world. Only the alert can combat this insidious program. What the Eighty-second Congress did to challenge and to thwart this threat is the substance of my report.

The greatest emphasis in both legislation and in policy was placed on inter-

national or foreign commitments. The Eighty-first Congress, with foresight and fearlessness, committed us to world leadership in the struggle against communism. The Eighty-second Congress implemented this solemn purpose. Many Americans objected to these commitments, stressing economy and the fact that American policy had always veered toward isolationism. They held that America should try to go it alone. Despite these controversies, the bipartisan foreign policy is more intact today than one might expect. This reflects credit on the realism and the patriotism of the Eighty-second Congress.

Let us look first at the record in international affairs. The outstanding accomplishment in this field is the Mutual Security Act of 1951. It underscores the opening of a new phase in the effort of the free world to discourage Communist aggression. It marks a turning point in our struggle for peace. Following World War II Europe lay open to the vandalism of the greedy Soviet Union. Its mines and factories, its rich natural resources, the wealth of its technical skills were completely unprotected and a tempting prize for the Communists. We thwarted their evil purpose and doubtless saved Europe from being completely overwhelmed when we gave aid to Greece against the Red guerrillas, to Turkey in its stand against encroachment of the Dardanelles, to Italy, to France, and to the United Kingdom. History will emphasize the importance of our contribution to freedom when record is made of our airlift in Berlin. To complete the picture, the Marshall plan rehabilitated and brought about the recovery of Europe. Instead of being satellites under the Soviet rule, these nations are now restored to stability, both materially and, we pray, spiritually, and are contributing to the defense program while trying to maintain their prewar standard of living.

The Marshall plan was accomplished in 3 years, a year ahead of schedule. The new program, the mutual-security plan, the natural successor to the Marshall plan, provides arms and equipment for the troops in Europe. Not only are the arms and equipment supplied, but, what is more important, the materials and machinery are given so that they can produce defense material themselves. In signing this measure, President Truman pointed out:

Their contributions are as important as our own. We must never forget that we are just as dependent on the efforts of other nations as they are on ours.

The Mutual Security Act of 1951 gives realistic expression and meaning to the foreign policy of the United States. Our objective now, as it always has been, is the establishment of a just peace. That objective can only be obtained by the collective efforts of the United States and the nations of the free world. Not to go through with this program would invite global war. To refuse to assist any nation and to return to an isolationist policy and await our turn to be attacked would probably mean the end of our civilization. This cannot be the policy of a world power—a world power

which has assumed and must continue to assume the leadership of the free world.

The security of the United States and the security of the free world are interdependent. The United States, geographically, economically, and politically is more capable of survival alone than any other nation. But, for how long could it survive if the rest of the world were in the orbit of Russian domination? Does it make sense to abandon Europe and Asia or the Near East or Latin America to Soviet imperialism when we consider the strategic importance and the economic importance of these areas to the United States? Where would we get our critical materials? How could we meet the combined industrial potential of the Soviet Union and an occupied Europe? These are questions we must ask ourselves in our own fundamental self-interest. This is a question of survival, not of giveaway programs.

The total cost of our defense is large. No one with any respect for the dollar—much less billions of dollars—can deny that. Even for a country such as ours, with our annual national production now well over \$200,000,000,000, it is a figure to make one pause. Congress appropriated approximately \$57,000,000,000 for domestic defense. In the Mutual Security Act, we authorized seven billion, three hundred millions for foreign aid. These two figures interlock. The one builds up the other. The purpose of each is the security of the United States—security for American lives and homes against attack, and the security of our rights and liberties as law-abiding members of the world community.

What price freedom? The question is: Are life and freedom worth the cost? There is only one answer. The trouble is that too few Americans fully realize the seriousness of the situation, of the terrible danger that threatens our way of life. It is hard for most of us, looking over our peaceful fields, our peaceful streets, to realize just how deadly is the danger that we face. In the security program, both domestic and foreign, the United States seeks to avert another and more ghastly Pearl Harbor. It seeks to avert a world war III by rebuilding the free world, militarily, economically, and, I hope, spiritually and morally.

Incorporated in the Mutual Security Act is an amendment which I am proud to claim as mine. As a member of the House Committee on Foreign Affairs, it was my privilege to introduce a proviso to section 101 (a) (2) of this law. On the basis of this proviso which was inserted during the mark-up of the bill by the Foreign Affairs Committee through my proposal, steps have already been taken by the executive agencies concerned to see to it that the serious surplus manpower problem in Western Europe is solved. The countries concerned, together with the United States, have formulated plans to work out this problem on a mutually satisfactory basis. Steps have also been taken to take over certain transport ships from the International Refugee Organization, which is due to wind up its activities by the end of December 1951. What are the facts

on surplus manpower in Europe? It is estimated that a minimum of three to four million workers plus the members of their families, a grand total of seven to eight million people, are available for emigration from Western Germany.

As for the willingness of countries to accept surplus manpower, Great Britain would be willing to receive from 50,000 to 100,000 people over a period of 2 to 3 years. France is able and willing to absorb about 50,000 annually over a period of 5 years. The following countries outside of Europe have declared their willingness to receive Europe's surplus manpower: Canada, Australia, New Zealand, Venezuela, Chile, Brazil, Argentina, Colombia, Peru, and Ecuador. I understand also that some of the countries in Central America are interested in the project.

In line with our Mutual Security Act, we have another allied bill. I had the honor to serve on the special subcommittee which made a comprehensive study of the complex problem of export control. Others on this committee were the chairman, Hon. LAURIE C. BATTLE, of Alabama; Hon. OMAR BURLISON, of Texas; Hon. ROBERT B. CHIPERFIELD, of Illinois; and Hon. JOHN M. VORVY, of Ohio. It was the purpose of this committee to make sure that our enemies are not assisted in building up their war machine by trade from the United States and our allies. As a result of the report of this committee, H. R. 4551, called the Battle bill, was passed by the Congress. It takes into account the complexity of the problem involved and, at the same time, firmly and clearly defines the United States policy in this field. It further provides for its effective administration. By the provisions of this bill, military and economic aid is denied to any country exporting arms and strategic material to the Soviet Union or its satellites in Europe and Asia. But its mandatory nature is limited to the extent that the President has discretionary powers to suspend certain provisions. This holds in cases where enforcement would harm the security of the United States and the free world. It is mandatory that aid be denied to countries shipping weapons, ammunition, or atomic material to Soviet-dominated countries.

In keeping with the best traditions and the highest ideals of our country, the Eighty-second Congress responded to the appeal of India for aid to feed the hungry millions of that famine-ridden country. I personally joined a group of sponsors to furnish emergency food relief assistance to India. Back of my keen interest in getting aid to India were two strong motives; the one, humanitarian, and the other, practical. India turned to the west for assistance. It was our chance to help this new independent nation as, we should not forget, we were aided in the early days of our Republic. Back of the humanitarian phase, there was another side to be considered—the practical, good business, and political aspect. This aid is necessary for world peace and for the general welfare of the United States in order that this new, independent republic shall remain a free nation. It is consistent with the foreign policy

of the United States in order to create situations of strength for new independent nations, and to permit them to work out their own internal problems by democratic processes, as the United States did during the early days of our own Republic. But, to me, more important than any other condition is the fact that India is geographically important to the free world, for if India were absorbed into the orbit of Russia, it would accrue to the benefit of Russia alone, to the detriment of the free world, and particularly to that of the United States.

Let us consider the importance of India's exports to us. Manganese is a metal for which no adequate substitute has been found in the making of steel. More than 93 percent of it is imported from the Gold Coast of Africa and from India. India shipped to the United States in 1950, 585,971 tons of manganese, three-quarters of its total exports. India exports of mica to the United States in 1950 were 80 percent of its entire supply. The United States is the leading importer of Indian jute manufactures. In summary, let me emphasize that India imports from the United States were \$230,000,000 per annum and that its exports to the United States were valued at \$192,000,000. Also, let me underscore the fact that India has no trade with the Soviet Union in strategic materials and has had none since 1946. With these facts in mind, is it not patent that our friendship with India is a direct contribution to our own national security?

Now let us look at the work of the Eighty-second Congress as it directly affects our home front.

MILITARY MANPOWER ACT (PUBLIC LAW 51)

This law amends the Selective Service Act of 1948 and contains the following major provisions:

Registration age is 18 with men being eligible for induction at 18½ years of age.

The local draft board is entirely responsible and it must take all eligibles in the 19 to 26 pool before those under 19 can be inducted.

The service of inductees is 24 months and 6 years must be spent in the Reserves after the completion of active duty. The first 4 months of basic training must be given in the United States.

Deferments based on marriage status can be considered only on hardship conditions.

Deferments are also considered for dependency and for educational and occupational reasons.

Any person deferred is subject to induction until he reaches the age of 35.

Physical standards are the same as those in the Selective Service Act of 1948, although the mental standard has been lowered to 65 on general classification.

Under this law, 385,000 registrants now deferred could be inducted.

This law places a 5,000,000 ceiling on the combined strength of manpower.

Also, it provides a committee to prepare a universal military training program which must be submitted to Congress for approval or substitution. This program will be introduced when the House convenes in January. I believe

this legislation is of the most essential nature.

While on the subject of military manpower strength, mention should be made of the new Reserve program which was passed by the House on October 15, 1951, but was not acted on in the Senate. This measure, therefore, did not become law in the first session of the Eighty-second Congress. It can, however, be considered by the Senate at the next session of the Eighty-second Congress. Under the provisions of this bill, reservists are divided into three groups—the Ready, Standby, and Retired Reserves. The President could call up only the Ready Reserve at will. Before issuing a call for Standby and Retired Reserves, the President would have to obtain from Congress the permissive number of such Reserves that could be summoned.

For the maintenance of our expanded Army, Navy, and Air Force for the fiscal year 1952, this Congress has appropriated the huge sum of nearly \$57,000,000,000, a record-breaking figure for any similar period when we have not been engaged in an all-out war.

We passed legislation authorizing, and providing, funds for a vastly expanded naval fleet through a \$2,700,000,000 program of ship conversion and construction, including a 57,000-ton flush-deck aircraft carrier, equipped to handle atomic bombers.

We provided a \$5,800,000,000 program for construction of new air bases and expansion of old bases, not only at home but at strategic points around the globe.

We increased the limit on expenditure of funds for building experimental-type atomic submarines and made available to the United States Maritime Board reserve funds for construction that will expand our merchant fleet.

We have increased from \$10,000,000 to \$45,000,000 the authorization for construction of access roads certified as essential to national defense.

The legislative program for promoting our great national-defense effort falls into two categories: gearing our economy to high production and building up our military manpower and machinery. The Defense Production Act is the main instrumentality for our economic and industrial mobilization.

This Congress extended to June 30, 1952, the broad, basic powers of the President to fix priorities for and to allocate defense materials and facilities to buy raw materials; guarantee and make loans for expansion of plants engaged in defense materials and facilities to buy raw materials; guarantee and make loans for expansion of plants engaged in defense work; control consumer credit, prices, wages, salaries, and rents.

Small business should share in greater proportion in the defense effort. In order to further this, we brought into being the Small Defense Plants Administration. This agency, under the President, was granted powers to make contracts with the Government for subletting to small manufacturing plants or to facilitate the channelling of contracts to them, provide technical and managerial aids, finance equipment and plants, recommend loans, and perform other help-

ful functions. A \$50,000,000 revolving fund was authorized to finance the operations of the agency.

This amended Defense Production Act did not meet head-on the problem of inflation. It was compromised by a functioning coalition of the conservative Republicans and the southern Democrats. I fear that the southern Democrats sided unquestionably with the special agricultural sectional interests which they represent, rather than recognize the welfare of all American people and in particular, those from industrial cities. They forgot to remember that the citizenry of large cities has assisted and supported legislation for the farmers through the years. They forgot, too, that the Democratic Party guided the interests of the farmers to security during the days of the depression—I refer particularly to the Agricultural Adjustment Administration, the soil conservation program, and rural electrification. The Republican coalition is not explainable. I am sure they could not conscientiously side with the large packers, nor agree with a sectional group for political expediency. Charles Wilson, Director of Defense Mobilization, a Republican of the highest integrity, endorsed this program. He supports private enterprise and aided its growth as president of General Electric. The coalition of Republicans and southern Democrats prevented roll-backs on meat and agricultural commodities. It prevented slaughtering restrictions or quotas which alone would control and prevent black-marketing.

The Defense Production Act extended the housing and rent control acts as well as the Fat and Oil Import Control Act.

There is too much relaxed curb on installment buying to properly control inflation. There must be a tightening of consumer credit. I hope that when we return for the second session of the Eighty-second Congress, the coalition will recognize their mistakes in these important matters of legislation and will amend the faulty provisions. I believe that unless we curb the inflation spiral we shall not be able to control our economy. That is elementary.

REVENUE ACT OF 1951

In an endeavor to place Government expenditures on a pay-as-you-go basis, the Eighty-second Congress passed a tax bill designed to raise about \$5,700,000,000 in a full year of operation at current income levels. The estimated revenue under prior law for the fiscal year 1952 is \$60,900,000,000. With the new bill in operation for part of the fiscal year this is expected to rise to \$63,700,000,000. Estimates of expenditures during fiscal year 1952 range between sixty-eight and seventy billion dollars.

Of the revenue increase for a full year of operation \$1,200,000,000 will be received from increased excise taxes, \$2,200,000,000 from increased corporate income taxes, and \$2,400,000,000 from increased individual income taxes. Of the increased individual income taxes about \$1,000,000,000 will be raised from the taxpayers with adjusted gross income below \$5,000 and about \$1,500,000,000 from taxpayers with adjusted gross income over \$5,000. For the taxpayers

below \$5,000 this amounts to about 1 percent of their adjusted gross income and above \$5,000 it amounts to about 1.8 percent of the adjusted gross income.

The increase in individual income taxes is provided by an increase of 11.75 percent of the present tax—11 percent in the first bracket—or 9 percent of the income after tax, whichever is the lower. The alternative of 9 percent which benefits higher incomes is necessary because an increase of 11.75 percent of present taxes which already range up to 87 percent would result in a tax alarmingly close to confiscation in the higher brackets. A special burden on a particular group of taxpayers was eased. These are single individuals who have the burden of supporting a child or other relative but cannot take advantage of the split income provision given to married couples. These people can compute their tax with a special surtax table which provides approximately half of the benefit of income splitting.

The corporation income tax was raised five percentage points to 52 percent. For excess-profits taxpaying corporations this will mean a marginal tax rate of 82 percent. The over-all ceiling of combined income and excess profits tax is raised from 62 to 70 percent. For both corporations and individuals the maximum tax on capital gains is raised from 25 to 26 percent.

Two important changes were made in the excess-profits tax. For any corporations with incomes less than \$300,000 a system of graduated ceiling tax rates was introduced rising from 57 to 70 percent through the first 5 years of the corporate life. The act reduced from 85 to 83 percent the proportion of the "average" base period net income to be used in finding the excess profits credit.

Certain tax exempt cooperatives were for the first time subjected to regular corporate income tax rates on that part of their income which is not distributed to patrons. In the case of mutual savings banks and savings and loan associations this was moderated by allowing tax-free retention of earnings until the reserve for bad debts and the surplus together equal 12 percent of deposit liabilities.

People over 65 years of age were given an additional benefit by being allowed tax reductions for all medical expenses up to the statutory limit, not just that part of medical expenses over 5 percent of income which is applicable to other taxpayers. Individuals who realize a capital gain on the sale of a home are permitted to postpone the realization of this gain for tax purposes if the gain is reinvested in another home within 1 year of the realization.

A number of excise tax changes were made which are here, for convenience, put in terms of the effect on the retail price. The tax on distilled spirits is raised the equivalent of 26 cents a fifth on the ordinary type of whisky bottled at 85 proof. The tax on beer is raised the equivalent of about one-third of 1 cent per 12-ounce bottle. The tax on wines is also increased in such a way as to increase the retail price from $\frac{1}{2}$ to $1\frac{1}{2}$ percent depending upon the type of

wine. The tax on cigarettes is raised by the equivalent of 1 cent on a pack and on gasoline by the equivalent of one-half of 1 cent per gallon. The tax on the manufacturers of automobiles is raised by about 2 percent of the retail price of the car. Since most of these are taxes on the manufacturer, business firms will have additional financing costs in carrying the tax until it is reflected in the final price so the actual increases may be slightly more than these. In the case of the tax on toilet preparations certain baby products are excluded, as are sales for the use of beauty and barber shops. The tax on telegraph, radio, and cable messages is reduced from 25 to 15 percent. In the case of the admissions tax certain charitable, educational, and other activities are made exempt from the tax.

A new tax is imposed upon professional gambling equivalent to 10 percent of the amount wagered. It is further required that each professional gambler pay an occupational tax of \$50 per year and properly display a special tax stamp. The list of individuals paying this occupational tax is to be available for public inspection.

VETERANS' LEGISLATION

The House defeated the bill introduced by Congressman JOHN RANKIN, which provided for the establishment of a veterans' hospital for Negroes. This bill was definitely discriminatory.

Public Law 23, the Servicemen's Indemnity Act of 1951, provides that on and after June 27, 1950, any person in active military service—including the National Guard when on active duty for 14 days or more—shall automatically be accorded \$10,000 life insurance by the United States without cost to such person.

Public Laws 101 and 104 permit veterans of both World Wars I and II to renew their term insurance. Also permission is given for use of dividends to pay premiums on national service life-insurance policies.

Spanish-American War pensions. Public Law 108 sets a new minimum pension rate for these veterans. Also, it increases monthly benefits to Spanish-American War veterans starting November 1951, and it liberalizes the eligibility requirements for these veterans.

Public Law 187 provides for the payment of \$1,600 toward the purchase of automobiles for blinded or amputee veterans.

Public Law 142 was enacted to protect veterans buying their homes under the G.I. bill of rights. Under this law, triple damage actions are provided against sellers who demand or accept more than the appraised price of the property.

LABOR

Public Law 78 authorizes the Secretary of Labor to recruit farm laborers in Mexico and transport them to and from the United States. The workers would be assigned to reception centers in the United States where American farmers holding certificates-of-need issued by the Department of Labor could employ them. I did not support this measure, feeling as I do that it is another unfair

act on the part of agricultural interests.

Public Law 189 is the first major change in union election procedures under the Taft-Hartley Act. This new law eliminates the Taft-Hartley Act requirement for employees' elections to show that at least 30 percent desire a union shop, prior to negotiation for and National Labor Relations Board certification of a union-shop agreement.

MISCELLANEOUS

Public Law 215 tightened standards for the sale of three classes of drugs—barbiturates, those "not safe except under supervision of a licensed practitioner," and new drugs already restricted by law to experimental use.

Public Law 201 grants Federal employees a 10-percent increase in compensation except that in no case will an employee receive less than \$300 per annum nor more than \$800 per annum increase.

Public Law 204 adjusts the salaries of post office employees in that all employees in the automatic grades receive a flat increase of \$400 annually.

During the first session of the Eighty-second Congress, it was not possible to obtain consideration of my bill to restore mail delivery service to two deliveries a day. It is my intention, however, to continue to press this issue when the Congress convenes for the second session.

Public Law 233 readjusts postal rates. Under this law, existing rates on first-class mail and air mail are unchanged. Effective January 1, 1952, postal and post cards will be increased from 1 to 2 cents. The fees on special services such as special delivery, insured mail, and collect on delivery mail are increased, and provision is made granting the Postmaster General authority to set such fees in the future. This law also provides a graduated leave system for employees in the executive branch of the Government, allowing 13 days leave for employees with less than 3 years service, 20 days leave

for employees with 3 but less than 15 years service, and 26 days leave for employees with 15 or more years of service. Thirteen days sick leave per year is granted all employees, regardless of length of service. This provision is effective on January 6, 1952.

Public Law 110 requires the labeling of all furs and fur products manufactured for or introduced into commerce. Also, imported furs and fur products must be properly labeled and invoiced.

I submit this report of the action of the Eighty-second Congress of the United States of America, and underscore its aim to maintain the leadership of the free countries of the world in the struggle against totalitarianism. The report shows that this Congress met the world crisis, not by defense programs alone, but also by a constructive economic program. There is reason to hope that, with the combined effort of Government and citizenry, the ideals of America's founding fathers can be realized. These ideals insist upon equality of rights and duties under God and demand respect for the dignity of man. This can be accomplished by remembering in our daily lives the motto of our country: In God we trust.

Report to the People of the Eighth Congressional District of Wisconsin—V

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a report to the people of the Eighth Congressional District of

Wisconsin on my voting and attendance record from the date of my last report to and including the adjournment of the first session of the Eighty-second Congress.

No attempt has been made to include votes on all of the numerous bills, motions, and amendments, but it does include all roll-call votes, all quorum calls, and my votes on other measures on which there was no record taken, but which I believe are of importance and concern to the people of the Eighth Congressional District of Wisconsin. The purpose of this report is to collect in one place and in concise form information which is scattered through some 15,000 pages of the CONGRESSIONAL RECORD. It also contains information which is not obtainable from any public record but which I feel should be available to the people of my district.

The descriptions of the bills and the amendments or motions as contained in the report are for the purpose of identification only; no attempt is made to describe the legislation completely or to elaborate upon the issues involved. I believe this word of caution is advisable in view of the fact that the descriptions used are, for the most part, taken from the official titles of the bills which unfortunately do not always reflect the nature or true purpose of the legislation. Upon request, I will be pleased to furnish more complete information concerning any particular bill, as well as a summary of the issues involved and the reasons for my vote.

The furnishing of this report continues a service I began in the first session of the Eightieth Congress. This is the fifth report of my voting and attendance record. These five reports show how I voted on 851 questions in the House of Representatives. Based on the quorum calls and the record votes, they also show an attendance record of 95 percent. The report follows:

Voting and attendance record, Representative John W. Byrnes, Eighth District, Wisconsin (81st Cong., 2d sess., continued)

Roll call No.	Date	Measure, question and result	Vote	Roll call No.	Date	Measure, question and result	Vote

107	July 11	do	Present.			Quorum call.	Present.
108	July 12	do	Present.			H. J. Res. 289, terminating the state of war between the United States and the Government of Germany. On adoption. (Adopted, 378 to 0.)	Yea.
		H. R. 3709, making appropriations for the Department of Labor and Federal Security agencies for fiscal 1952. On motion to recommit to committee on conference with instructions to insist on House provision barring the filling of more than 25 percent of vacancies occurring in 1952 in the offices, bureaus, etc., covered by this bill. On adoption. (Adopted, 223 to 170.)	Yea.	135	do	H. Res. 335, providing for the consideration of H. R. 4484, confirming and establishing the titles of the States to lands beneath navigable waters within State boundaries and to the natural resources within such lands and waters. (Iceland.) On adoption. (Adopted, 270 to 92.)	Yea.
109	do	do	Yea.			Quorum call.	Present.
		Quorum call.	Present.			S. 1717, amending and extending for 1 year the Defense Production Act of 1950. On adoption of conference report. (Adopted, 294 to 80.)	Yea.
110	July 13	do	Present.			H. R. 1181, confirming and establishing the titles of the States to lands beneath navigable waters within State boundaries and to the natural resources within such lands and waters. (Iceland.) On passage. (Passed, 265 to 109.)	Present.
111	July 16	do	Present.			Quorum call.	Present.
		H. R. 3460, increasing penalties for illegal traffic in narcotics. On suspension of the rules and passage. (Passed, voice vote.)	Yea.	136	July 27	H. R. 3790, making appropriations for Department of Interior for fiscal year, 1952. (Conference report.)	Yea.
112	do	Quorum call.	Present.			On motion to recommit to committee of conference with instructions to insist on House provision barring the filling of more than 25 percent of vacancies occurring in 1952. (Recommitted, 180 to 170.)	Present.
113	do	do	Present.			Quorum call.	Present.
114	do	do	Present.			do	Present.
115	July 17	do	Present.			do	Present.
116	July 18	do	Present.			H. R. 4550, banning export of military items to Russia and satellites, cutting off aid to other countries making such exports. On passage. (Passed, voice vote.)	Yea.
117	July 20	do	Present.			H. R. 1180, facilitating research and development work by armed services. On passage. (Passed, voice vote.)	Yea.
		H. R. 3871, amending and extending for 1 year the Defense Production Act of 1950. On adoption of conference report. (Adopted, 294 to 80.)	Yea.	137	do	H. R. 1227, raising to \$50 million the limitation on construction cost of experimental submarines. On passage. (Passed, voice vote.)	Yea.
118	do	On Andersen amendment restricting until June 30, 1953, imports of fats and oils, cheese, dairy products, peanuts and rice. On adoption. (Adopted, 266 to 147.)	Yea.			Quorum call.	Present.
119	do	On Davis (Wisconsin) amendment establishing 1 Government agency through which all claims of municipalities for materials, etc., would be channelled. On adoption. (Defeated, 164 to 251.)	Yea.	138	do	do	Present.
120	do	On Hope amendment preventing the placing of quotas on livestock slaughtering. On adoption. (Adopted, 240 to 167.)	Yea.			H. R. 5051, making appropriations for Department of Defense for fiscal year, 1952. On amendment to reduce by \$15 million the funds for preparation for sale or salvage of certain obsolete equipment. On adoption. (Adopted, voice vote.)	Yea.
121	do	On Wolcott amendment deleting language enlarging the President's authority to acquire property including facilities and to erect plants, factories, etc., and to engage in the marketing, transportation, and storage of such critical materials necessary to national defense, but authorizing installation of additional equipment, facilities, etc., in Government-owned plants and the installation of Government-owned equipment in privately owned plants. On adoption. (Adopted, 233 to 184.)	Yea.	139	July 30	On amendment designed to secure the discharge of certain inactive or volunteer reservists who have served 12 months. On adoption. (Adopted, 122 to 102.)	Yea.
122	do	On Hardy amendment deleting authority to create new Government corporations by Executive orders. On adoption. (Adopted, 250 to 167.)	Yea.	140	do	Quorum call.	Yea.
123	do	On amendment authorizing a roll back of 10 percent below the May 10, 1951, prices of agricultural commodities. On adoption. (Adopted, 234 to 183.)	Yea.			do	Yea.
124	do	On Cole amendment providing a fair and equitable margin for each species of livestock processed to insure a fair profit to all segments of the industry on each species. On adoption. (Defeated, 166 to 249.)	Yea.	141	do	do	Yea.
125	do	On Davis (Georgia) amendment providing that for a period of 120 days following enactment of bill prices and wages, salaries, and other compensation shall not be raised above the levels prevailing on July 7, 1951, except that agricultural products may not be prevented from reaching parity. On adoption. (Defeated, 172 to 213.)	Nay.	142	July 31	Quorum call.	Present.
126	do	On Poage-Cole amendment to set up a formula, including parity costs, for arriving at ceiling prices for all commodities to insure a reasonable profit. On adoption. (Defeated, 181 to 234.)	Yea.			H. R. 5051, making appropriations for Department of Defense for fiscal year, 1952. On amendment to reduce by \$15 million the funds for preparation for sale or salvage of certain obsolete equipment. On adoption. (Adopted, voice vote.)	Yea.
127	do	On amendment exempting strategic metals and minerals from ceiling prices when in short supply. On adoption. (Defeated, 200 to 216.)	Yea.	143	do	On amendment designed to secure the discharge of certain inactive or volunteer reservists who have served 12 months. On adoption. (Adopted, 122 to 102.)	Yea.
128	do	On adoption of amendment deleting from the bill language authorizing the licensing of and suspension of licenses of certain businesses covered by the scope of the bill. On adoption. (Adopted, 333 to 82.)	Yea.	144	do	Quorum call.	Yea.
129	do	On amendment deleting from the bill language relating to control of commodity speculation. On adoption. (Adopted, 242 to 172.)	Yea.	145	Aug 1	do	Yea.
130	do	On motion to recommit. On adoption. (Defeated, 117 to 299.)	Nay.	146	Aug 2	do	Yea.
131	do	On passage. (Passed, 323 to 92.)	Yea.			H. R. 4550, banning export of military items to Russia and satellites, cutting off aid to other countries making such exports. On passage. (Passed, voice vote.)	Yea.
132	July 25	Quorum call.	Present.			H. R. 1180, facilitating research and development work by armed services. On passage. (Passed, voice vote.)	Yea.
		H. R. 3880, making appropriations for the Executive Office and sundry independent offices for fiscal year, 1952. (Conference report.)	Yea.	147	Aug 8	Quorum call.	Present.
133	do	On motion to recommit to committee of conference. On adoption. (Adopted, 188 to 186.)	Yea.	148	do	do	Present.
		H. R. 4746, making appropriations for Departments of State, Justice, Commerce, and the Judiciary for fiscal 1952. On amendment to cut \$21 million from funds for salary and expenses of State Department. On adoption. (Defeated, 71 to 79.)	Yea.	149	Aug 9	do	Present.
						H. R. 5051, making appropriations for Department of Defense for fiscal year, 1952. On amendment to reduce by \$15 million the funds for preparation for sale or salvage of certain obsolete equipment. On adoption. (Adopted, voice vote.)	Yea.
						On amendment designed to secure the discharge of certain inactive or volunteer reservists who have served 12 months. On adoption. (Adopted, 122 to 102.)	Yea.
						Quorum call.	Yea.
						do	Yea.
						do	Yea.
						H. R. 4914, authorizing certain construction at military and naval installations. On passage. (Passed, 353 to 5.)	Yea.
						H. Con. Res. 110, expressing indignation at the arrest and conviction of William N. Oatis by the Czechoslovakian Government. On adoption. (Adopted, 364 to 1.)	Yea.
						Quorum call.	Present.
						H. R. 3880, making appropriations for the Executive Office and sundry independent offices. (Conference report.)	Yea.
						On motion to recommit to conference committee with instructions to insist on House provision relating to public housing. On adoption. (Defeated, 160 to 207.)	Yea.
						On adoption of conference report. (Adopted, 290 to 80.)	Nay.
						Quorum call.	Present.
						S. 349, providing housing and community facilities and services in connection with the national defense. On amendment fixing the termination date of the Act as June 30, 1952 instead of June 30, 1953. On adoption. (Defeated, 184 to 184.)	Yea.
						On amendment striking out provision for acquisition of sites for development in connection with isolated defense installations. On adoption. (Defeated, 175 to 199.)	Yea.
						On passage. (Passed, voice vote.)	Nay.

¹ Absent, would have voted "yea" if present.

² Absent, would have voted "nay" if present.

³ Absent, paired for.

⁴ Absent, paired against.

AN EXPLANATION OF TERMS

Of necessity the report contains parliamentary and legislative terms with which the reader may not be familiar. An explanation of some of these terms may, therefore, be helpful:

A. A quorum call consists of a calling of the roll of Members to determine

whether or not a quorum—a majority of Members—is present. No business may be conducted when it is found that a quorum is not present.

B. Recommitment: Generally, on all important bills, a motion to recommit the bill to a committee, with or without instructions, is voted upon by the House

before it votes upon passage of the bill. If such a motion is adopted, it means that the bill will be changed, delayed, or even killed. However, when a motion to recommit is accompanied by instructions, the vote generally indicates whether the Member is in favor of or opposed to the change in the legislation proposed by the

instructions and does not necessarily indicate his position on the bill as a whole. A motion to recommit with instructions, if adopted, does not kill the bill.

C. The type of bill can be determined by the letters which precede its number. All bills that originate in the House are designated by an H; those that originate in the Senate, by an S. There are four main types:

First. H. R. (S.) designates a bill which when passed by both Houses in identical form and signed by the President, becomes law.

Second. H. J. Res. (S. J. Res.) designates a joint resolution which must pass both Houses and be signed by the President before becoming law. It is generally used for continuing the life of an existing law, or in submitting to the States a constitutional amendment, in which case it does not require the signature of the President but must be passed by a two-thirds majority of both Houses.

Third. H. Con. Res (S Con. Res) designates a concurrent resolution. To become effective it must be passed by both the House and Senate but does not require the President's signature. It is used to take joint action which is purely within the jurisdiction of Congress. Many emergency laws carry the provision that they may be terminated by concurrent resolution, thus eliminating the possibility of a Presidential veto.

Fourth. H. Res. (S. Res.) designates a simple resolution of either body. It does not require approval by the other body nor the signature of the President. It is used to deal with matters that concern one House only, such as changing rules, creating special committees, etc.

D. Rule: Important bills, after approval of the committee concerned, go to the House Committee on Rules where a rule, in the form of a House Resolution (H. Res.), is granted covering the time allowed for debate, consideration of amendments, and other parliamentary questions.

E Conference: Representatives from both Houses of Congress meet in conference to work out differences existing in the legislation as passed by the two bodies. Upon conclusion of their conference, a report is submitted to each House setting forth the agreements reached. Each House then must act by way of adopting or rejecting the report in whole or in part.

F. Ordering the previous question: A motion to order the previous question, if adopted, shuts off further debate on the question before the House and prevents further amendments to such proposition.

G. A bill may pass, or be defeated, by one of the following kind of votes:

First. Voice vote: The Speaker first asks all in favor to say "aye," then those opposed to say "nay." If there is no question as to the result, this is sufficient.

Second. Division: If the result of the voice vote is in doubt, the Speaker asks those in favor to stand, then those opposed to stand. He counts in each instance and announces the result. If he is in doubt, or if demand is made by one-fifth of a quorum, then—

Third. Tellers are ordered. A Member on each side of the question is appointed as tellers, and they take their places at each side of the center aisle. Those in favor walk through and are counted. Those opposed do likewise. The result settles most questions, but any Member, supported by one-fifth of a quorum, can ask for a roll call. This privilege is guaranteed by the Constitution.

Fourth. Roll calls place each Member on record on the particular measure involved. Each Member's name is called, and his vote recorded. Roll calls constitute the official voting record of the House.

The results of various votes when taken by a division, tellers, or roll calls are indicated in parentheses in the record above. The "yeas" are shown first; the "nays" last.

Alert Residents of New York's Nineteenth Congressional District Show Public Opinion Favors Continuous Negotiations for World Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KLEIN. Mr. Speaker, I know that the Members of this great House are aware of my overwhelming pride in the people of the Nineteenth Congressional District of New York because so often, in the history of this wonderful country of ours, out of the depressed economy of this area have come the strength and dedication to bring about much-needed reforms.

Ancient tenements are making way for modern housing developments, and in two of those housing projects, built and owned by the Metropolitan Life Insurance Co. under New York State laws, we have tenants who represent a cross section of intellectual opinion in the country, more representative than a college faculty but certainly as high in intelligence and information quotients.

This group is, as a whole, aggressively contemporary in attitudes of thought and in the physical aids to measuring those attitudes.

I am in receipt of a recent letter from Mr. Michael Tobin, 7 Stuyvesant Oval, executive secretary, T. & V. Council for Peaceful Alternatives, presenting me with the results of a poll in Stuyvesant Town and Peter Cooper Village on four important topics. Since his communication speaks for itself, I am inserting his letter and accompanying release in the Record under leave.

The matter follows:

MY DEAR CONGRESSMAN: I am taking the liberty of writing to you and to other leaders in this community on a matter which is uppermost in all our minds today.

As you no doubt know, the T. & V. Council for Peaceful Alternatives has just concluded

a polling of the residents of Stuyvesant Town and Peter Cooper Village on the question of peace. The tabulated results of this poll were very gratifying to our council since they indicated that more than 90 percent of the T. & V. residents favor continuous negotiations to explore peaceful alternatives to war. We are certain that the poll results will be equally gratifying to you and to the overwhelming majority of the residents in this area.

It is most important that the thinking of the community on this vital question be given the widest possible publicity. To this end, we have sent press releases to most metropolitan newspapers and to the community newspaper, Town and Village. We are enclosing a copy of the press release and a sample of the ballot used in the poll.

We would very much appreciate any suggestions you have to further circulate the results of the poll. We sincerely invite any other comments you may wish to make and look forward to hearing from you.

Very truly yours,

MICHAEL TOBIN,
Executive Secretary, T. & V. Council
for Peaceful Alternatives.

A sample polling of tenants of the Stuyvesant Town housing development on the east side of Manhattan showed a near-unanimous vote favoring continuous top-level negotiations among all the major powers to secure world peace. It was announced today by the Town and Village Council for Peaceful Alternatives which conducted the poll.

Of a total of 1,048 secret ballots cast in 25 buildings in Stuyvesant Town, at busy shopping areas and in playgrounds in the community, 1,002 favored continuous efforts to secure world peace with 23 opposed. Twenty-three had no opinion.

The poll also showed Stuyvesant Town tenants opposed to rebuilding of the German and Japanese armed forces—in each case by better than two and one-half to one, and opposing the inclusion of Communist China in discussions pertaining to far-eastern problems, by a vote of five to four.

Results of balloting on the latter three questions were as follows:

"Are you in favor of rebuilding the German armed forces?"
Yes..... 240
No..... 702
No opinion..... 106

"Are you in favor of rebuilding the Japanese armed forces?"

Yes..... 262
No..... 669
No opinion..... 117

"Do you believe that Communist China should be included in discussions pertaining to far-eastern problems?"

Yes..... 456
No..... 530
No opinion..... 62

Planned for several weeks prior to the actual balloting by the Council for Peaceful Alternatives, made up of tenants of Stuyvesant Town and Peter Cooper Village, the poll utilized latest scientific methods of studying public opinion. Tenants were polled in 25 of the project's 89 buildings, on alternating floors, after having been advised in advance that a poll-taker would visit them.

Three chief shopping centers and all playgrounds in and around Stuyvesant Town were also covered.

Sixty tenants of Stuyvesant Town took part in planning and conducting the poll. Sponsors and supervisors were four prominent residents of the community, including: Dr. Sol Nichtern, Dr. Leonard Rittenberg, Dr. Harry Swartz, and Mr. Norman Stunder.

Ruhr Valley of America

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr O'CONOR. Mr. President, believing that it serves a definite purpose to bring to the attention of our people the industrial miracles that have been achieved in various areas of the country, I ask inclusion in the CONGRESSIONAL RECORD of an address by Col. Roy B. White, president of the Baltimore & Ohio Railroad, recently extolling the importance of the Ohio River Valley, which he termed "the Ruhr Valley of America."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr Simpson, his honor the mayor, and gentlemen, I am pleased to extend to all of you and to those who could not be with us the greetings and good wishes of our board of directors and our official family.

Only a few years ago I delivered a speech here in Huntington and tried to emphasize the importance of the Ohio River Valley. I do not believe I failed, but this evening I will try to cause you to have a greater appreciation of it, and I am pleased to have this opportunity to do so.

I will endeavor to convey my thoughts concerning the importance of this mighty "Ruhr Valley of America," and, knowing the head can absorb only as much as the seat can endure I will be brief and not burden you with endless statistics, facts, and figures.

I do hope I can picture my thoughts in words which will leave no doubt in your minds as to my intent and purpose. This is not always easy to do. As an example, recently the teachers at one of our schools were interviewing parents entering children. One young lady teacher was quite startled to have an attractive young man say to her, "I am the father of the twins you are going to have this year."

Sometimes words seem to have many meanings, but we want our presence in Huntington this evening to indicate the high regard in which we hold this community and its businessmen. Since I last addressed you here we first demonstrated our confidence in the importance of the Ohio River Valley and its unlimited potentialities as a great industrial area by the expenditure of approximately \$2,000,000 for our new bridge over the Great Kanawha. Since that time great developments have proven our confidence was well founded, and we have contributed in many other ways.

Some of you here tonight helped us to dedicate that new bridge. We saw in its use an insurance of a north and south railroad for your city and a direct link between the Great Lakes ports and the industrial areas bordering them, including the great Pittsburgh steel district on the one hand, and the great market areas to the south on the other.

You and I can look back but a few years to a time when this territory along the Ohio was just a green, peaceful valley and not the thriving, humming, industrial region it is today.

Yes, in about 10 short years, we have seen the sleepy valley of the Ohio become the humming "Ruhr Valley of America." The pioneer, I suppose, was the Pittsburgh Plate Glass Co's Columbia chemical division.

These astute and far-sighted pioneers were satisfied that there were practically inexhaustible veins of rock salt a mile underground in the territory where their immense plant is now located. That great plant is now operating as the Columbia-Southern Chemical Corp.—a Pittsburgh Plate Glass subsidiary. These technical and smart gentlemen named their plant site from the treasure hidden beneath the earth. They called the site "Natrium," which means "sodium"—that commodity which we, of limited education, call "salt."

From that start in 1840, development has progressed rapidly—and especially so in the last few years.

The list of great companies located in this territory reads like a blue book of American industry. You know these names as well as I do, but I am going to review them if for no other reason than the thrill it provides in realizing that their very being, their growth, their expansion, their vital part in our way of living is a testimonial to our way of life, our own system of free enterprise.

So, let's see what American businessmen, under the old banner of freedom and free enterprise, have done as we move along the West Virginia side of the Ohio River.

After leaving Wheeling we glide past the Pittsburgh Plate Glass Co's plant at Natrium, and its neighbor, Glyco Products Co.; the Calco division of American Cyanamid Co. at Willow Island, and the E. I. du Pont de Nemours Co. at Washington. That could be enough to revolutionize one side of any river, but there are more. The Vanadium Corp. of America and the Central Coal Co. at Graham. The former West Virginia Ordnance Works at York, which served its own vital purpose, will now provide the site for two other large industries—the proposed gun-tube plant of the Army and the Industrial Rayon Corp. And then just below Point Pleasant is the site of the projected Celanese Corp. plant.

I could mention many more, including some new ones which I am not privileged to mention by name—new plants making great investments on the West Virginia side.

And on the other side of the river, toward Zanesville, is also an array of industrial might. There is the great Union Carbide and Carbon Corp's Riverview project just below Marietta. Their bakelite and electro-metallurgical divisions are now in partial operation. Also, just above Marietta is the B. F. Goodrich plastic plant.

But not all the money is spent on new plants. Some of the veterans must keep modernizing, changing, and expanding. The Libbey-Owens-Ford Glass Co., the Ames-Baldwin-Wyoming Co., and the Corning Glass Works at Parkersburg, the Marietta Manufacturing Co. at Baden, the Wheeling Steel Corp. and Louis Marx & Co. at Wheeling, and the Triangle Conduit Co. at Glendale, all have made or planned important expenditures in expanding facilities which long have been in production.

But you can't have hustling, thriving industries without a source of constant power, for the American power plant is the heart of American industry. Therefore, I pay just tribute to the work of the power companies in creating this great beehive of activity. I mention the American Gas & Electric Co., with its several plants—the Philip Sporn, at Graham, the Philo plant, at Philo, the Muskigum, at Relief; and its supporting Kanawha River plant, at Glasgow; also the Monongahela Power Co., with divisions at Willow Island and Rivesville.

I have said I will not burden you with statistics—but may I quote just a few startling figures. These power plants I have just mentioned represent an investment, roughly, of \$335,000,000. To this you can then add, with some degree of accuracy, another \$439,000,000 already spent and in plan-

ning for the plants I have named and have not named. This is a total of more than \$750,000,000. I have no personal way of knowing just what a stack of dollars that is—but it is a stack all right, and there is no mistake about it—and this has all been done right in this valley in less than a decade.

These industrialists are wise men; men of proven business judgment and they do not spend that kind of money without reason. Important industries of the Nation are looking to this area with every good reason. They know, as we do, that in this triangle which nature has so generously endowed, can be found those things which are so vital to successful industrial venture. Here we have the economic atmosphere and the conditions essential to profitable production. Here in this valley are all of those industrial essentials, coal, natural gas, good and plentiful water, thick veins of rock salt, lakes of salt brine, and an abundance of electric power with coal as its creator.

There is one other vital element present in this territory—an element not provided by the generous hand of nature, but by the pioneering spirit of Americans like yourselves—transportation. An adequate system of steel rails, which also provide the bulk of the essential transportation of the Nation, and without it our industries cannot survive. It is also provided with sufficient highway and water transportation to abundantly supply industrial needs and afford ample protection so necessary to encourage continued industrial growth.

We are pleased to have the privilege of serving these fine new plants. We're glad to know that they, along with us, have great confidence in the future of this part of the country. Faith in the future of America is so clearly demonstrated when industry invests such amounts of money in constructing and equipping such modern plants as these. I feel sure you all join in this confidence and faith.

As you listen to me tell you of the great possibilities of this area, I hope you get the idea that I'm a pretty good salesman for your valley. Well, I am. In fact, I feel that B. & O. people are your top salesmen. It is to our own benefit to be so, and it is our business to be so—and besides, the better off you are, the better off we are bound to be.

Acting as liaison between industry and this region of present and potential industrial greatness is a long, tedious process. The seed planted today may not bear fruit for several years. But experience has demonstrated that when some of our ringleaders have shown their faith in a particular industrial region, and have backed that faith with quite substantial investments, others follow the lead. That is happening today in this area.

But we don't oversell. We don't have to. We are very realistic in our contacts with the executives of industry. We tell all who will listen about this area by word of mouth and by advertisements in national magazines. We have something to sell many of those executives—and we believe we know 5,000 of them, through one means or another. Day in and day out we tell our story of the advantages of this mighty valley; day in and day out we keep trying to put more and more plants in the valley and on the B. & O., and thus add more payrolls in the communities which we serve and add to the traffic we haul. I want you also to know that this year new industries are being established and existing industries are being expanded quite generally over our system. Nationally, industry is expanding this year at the sizable rate of about \$23,000,000,000.

Our representatives in this territory, in addition to being part and parcel of the community, are also active salesmen for this area. Please accept my sincere thanks for the consideration you have shown them.

We work in close harmony with the great State of West Virginia, its towns, its cities, and its industries. We think it is important for us to do so, and we believe it is important to West Virginia that we do so. We have all grown up together, and we will continue to go forward together.

There are many questions troubling those of us in transportation under today's conditions. I could make another talk on this subject alone. I shall not do so.

Someone has said: "Time is but the stream I go a-fishing in." I hope your time this evening has given you as much pleasure as this occasion has given me. I leave this thought with you—What the future holds, no man knows. But with America's great productive capacity still growing, with our Nation untouched to any important degree by World War II, with more and more modern weapons, and with the spirit of our men in uniform and our people, we still have great confidence.

Should Business Week Censor the Censors?

EXTENSION OF REMARKS

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an exchange of correspondence between David Heath, attorney at law, of Dallas, Tex., and Elliott V. Bell, editor and publisher of Business Week, with reference to the question, Should Business Week censor the censors?

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

OCTOBER 5, 1951.

DEAR Mr. BELL: If it is the policy of your publication to ferret out the newest and latest techniques of those who are manufacturing equipment for our armed services and direct the attention of our enemies to them, you may have been unusually successful of late.

For example, in Business Week for September 22, 1951, beginning on page 78, you have an article that purports to reveal the newest and latest technique for manufacturing napalm. You give the name and location of the manufacturer, the monthly capacity, size of reserve tanks, size of mixing tanks, the fact that steam pipes around the sides of the mixing tank keep it at the right temperature, the length of time a batch is mixed, that it is mixed mechanically through metered pipe, the temperature at which it is dried, etc. There are numerous illustrations, including the interior of the drier with its spirals used to elevate the napalm and spill it out through the heated air.

I wish you would ask yourself, "Can this article direct the attention of the Communists to techniques that they are not already using?" If so, "Does it thereby enhance the likelihood that American boys may be fried with napalm produced from a Soviet factory copied after this one?"

In Business Week for September 29, 1951, on page 70 you have an illustrated article concerning a new device for making 14 turbine blades at one time. You give the name and address of the manufacturer. That the

importance of this device militarily is not lost on you is indicated in your first sentence in this article: "Turbine blades are among the biggest bottlenecks in making aircraft jet engines."

Mr. Bell, I do not wish to impugn your motives or call into question your patriotism in any way, but I do feel that you haven't been thinking. You must know that a reporter backed by the prestige of your organization will be made privy to production techniques that would be denied to a member of the staff of the Soviet Embassy if he were to ask for them.

It may be that there are technical magazines that have already gone into these particular items in far greater detail. If so, it raises the question of how on the one hand we can have the priceless advantages of freedom of speech and interchange of ideas, which promote further technological progress, and at the same time keep from showing the Russians all our latest inventions. Perhaps a distinction may be drawn in the use of the end product. For example, an improvement in drying wood would be something to numerous organizations, and the end product would not be military. Whereas, an improvement in the manufacture of napalm and of jet-engine blades can be of interest to only a handful of manufacturers who are manufacturing only direct weapons of war. In the latter instance it would seem that the public interest is not served by general publication of the information.

Sincerely yours,

DAVID HEATH.

DEAR Mr. HEATH: Your letter raises the critical question of security of information. It comes at a time when President Truman has just declared that 95 percent of the security information of the United States already has been published by American newspapers and magazines. Business Week welcomes this chance to review the facts concerning the two articles you criticize and to state its view on the broader, general problem.

With respect to the article in the September 22 issue on the latest technique for manufacturing napalm, these are the facts.

Prior to the release of this information by Ferro Corp., of Cleveland, Ohio, the developer of the technique, it was cleared by that company through Army Ordnance. All the facts in Business Week's article were within the bounds of security as defined by the military.

With respect to the article on making turbine blades, these are the facts: A. V. Roe Canada, Ltd., and Modern Tool Works, Ltd., which developed this new machine, cleared the disclosure of it with the Royal Canadian Air Force. In this case, also, there was full compliance with military security.

In both these instances Business Week was reporting unclassified material. But, why, as your letter inquires, did Business Week not censor the censors? That is the same question the President raised last week.

The first answer to that is obvious: You can't have a voluntary military censorship. Only competent military authority can judge what must not be made public knowledge. But the other answer is that Business Week regards the dissemination of technical information that has been cleared through the military as a vital part of its task. It is a transmitter in the intercom system of American industry. We need, and need fast, better, cheaper, speedier ways of making war matériel. Suppression of this sort of information would merely slow down the rate at which new processes can be adopted to get arms to the defenders of the free world.

Failing to get this information out would be giving Stalin & Co. more help than his spies can get him from these published accounts.

For example, after the publication in Business Week of the article on napalm, an officer of the Chemical Procurement Division of Army Ordnance told Ferro Corp. that he was highly pleased that the story appeared. He hoped that other manufacturers of napalm would be induced to use this cheaper and speedier method that Ferro had developed.

The turbine blade case provides further support for Business Week's policy. Publication of the Canadian method got the information to American manufacturers faster than any routing as classified information through military channels would have done. Also, it made the facts available to any defense contractor who might be able to adapt the method to operations unrelated to jet engines.

Business Week supports a policy of enlightened censorship of military information. It will scrupulously abide by the rules of the game. It will publish no classified material, but it will continue to disseminate other information that can step up the tempo of our economic mobilization.

Yours sincerely,

ELLIOTT V. BELL.

"One of the World's Leading Authorities on the Far East Conflict Declares 'The United States Air Force Has Raised the Horns of a Dilemma,' Which, if Properly Exploited, Could Create an Iron Curtain Between Russia and China and Separate Those Communist Governments"—John David Griffin, Editor of the New York Enquirer

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, the eyes of the world are upon the first session of the Eighty-second Congress now completing its work before adjourning. The thought of all people in the country is upon Korea.

Wondering if and when the peace talks will be concluded, they are speculating on whether or not our boys will have to face another winter of bloody war in the subzero temperatures in the hills and valleys of Korea.

The long battles raging—the casualties now taking place—in the iron triangle and on Heartbreak Ridge are daily causing heartaches everywhere in America.

For these reasons all are praying for even a glimmer of hope and for overwhelming victory over the aggressors—a victory that will bring an end to aggressive warfare for all time.

Mr. Speaker, I have just come upon a wonderfully clear and altogether provocative interview, written by one of the world's leading authorities on the present-day conflict in Korea. In this interview, William Courtenay of the Kemley

Newspapers of England—after a 50,000-mile survey of American airpower—emphasized the fact that it was the work of the United States Air Force that had caused the Chinese Reds to seek the armistice following their tremendous losses in the spring campaigns of April and May.

Mr. Courtenay then went on to say:

The last thing the Russians desire to see is the destruction of the industries of Manchuria following the loss of the North Korean industrial centers. The United States Strategic Air Force flattened the latter in the first 100 days of the conflict. The Russians are dependent upon the former for their own build-up in the Far East.

Mr. Speaker, in order that my colleagues on both ends of the Capitol may have the opportunity of learning of the observations made by Mr. William Courtenay so that they may have a fuller understanding of the problem, I am including in my remarks this interview with John David Griffin, editor of the New York Enquirer, which reads as follows.

IN THE FAR EAST AND AT HOME—A 50,000-MILE SURVEY OF AMERICAN AIR POWER

(By John David Griffin, editor of the New York Enquirer)

"The last thing the Russians desire to see is the destruction of their industrial centers in Manchuria following the loss of the North Korean industries," stated William Courtenay, O. B. E., N. M., of the London Sunday Times, the Daily Graphic, and the Kemsley newspapers of England, upon his arrival from Washington at Idlewild airport yesterday.

Courtenay, who has just completed a 50,000-mile tour of United States Air Force, Navy, and Army installations throughout the country, is one of the world's leading authorities on the present-day conflict in the Far East.

Speaking of the campaign in Korea, he stressed that the work of the United States Air Force had largely caused the Chinese Reds to seek the armistice at the close of last June following their tremendous losses in the spring campaigns of April and May.

BATTLEFIELDS ISOLATED

"The power of the United States Air Force, combined with that of the Royal Australian Air Force and South Africa Air Force squadrons assigned to the United Nations forces in Korea, stepped into that 10-mile gap, caused in the first thrust at the Imjin River, and effectively isolated the battlefields to such an extent that the Chinese infantry suffered enormous losses—losses that they will be unwilling to face again."

The British writer takes the view that the United States Air Force has raised the Communist government at Moscow on the twin horns of a dilemma, one which, if properly exploited by the American and British authorities could create an iron curtain between Russia and China and, at the same time, separate these Communist governments.

"The last thing the Russians desire to see," he observed, "is the destruction of the industries of Manchuria following the loss of North Korean industrial centers. The United States Strategic Air Force flattened the latter in the first 100 days of the conflict. The Russians are dependent upon the former for their own build-up in the Far East."

CHALLENGE TO SOVIET

"But," he continued, "if they were able to bring their air units to the battle line and

aid the Chinese armies, the latter might still win a military victory, since their infantry is 4 to 1 over that of the United Nations.

"If they commence bombing the U. N. infantry and aid the Chinese armies, they will invite certain destruction of Manchurian airfields, industries, and communications, since, in such conditions, the U. N. forces would no longer possess that luxury of choice which they enjoy today.

"Since the Chinese cannot win the war without this air aid, the Russians must either provide it, and risk the destruction of the industries of Manchuria by the United States Strategic Air Forces, or deny it to their Communist allies because the protection of the Manchurian industries is a greater Russian interest than helping the Chinese armies whom they coaxed on into the Korean conflict with the promise of full air support.

"BY HOOK OR CROOK"

"This," Courtenay continued, "is their dilemma and in time the Chinese will realize they have been left on the receiving end of fire power from the United States Air Force for 18 months with no air protection from Russia, while the United Nations line has never known an air raid."

Courtenay warned that the Communists are determined to secure control of Korea by hook or crook, that there has not been a change of heart but only a change of tactics because they have failed to secure a military decision.

"The greatest danger," he professes, "will rise after the 'cease fire'. There will be pressure to 'bring the boys home'."

"It must be resisted," he said, "and we must hold a firm line for quite some time to come until North and South Korea are united and protected. The Communists plan to urge us to withdraw, as they demanded at the first armistice talk on July 10. Their purpose in having us withdraw is so that they can infiltrate into the south and take it from within—a popular Communist procedure."

Courtenay leaves for England on Tuesday to give a first hand report to the British people, as well as governmental leaders, on the striking power of the United States Air Force and other American units in the Far East.

Confusion Hurts Fortieth

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. HILLINGS. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD an editorial which appeared in the San Diego Union on Thursday, October 18, 1951. This editorial quite appropriately states the morale problem in California's Fortieth Division. The editorial follows:

CONFUSION HURTS FORTIETH

Confusion in the Pentagon seriously is impairing the morale of California boys serving in this State's Fortieth Division in Japan.

Letters from both officers and enlisted men indicate that the lack of clarity in determining the status of these National Guard men has threatened the efficiency of California's civilian soldiers.

During the last few weeks, there have been numerous statements by general officers that

these men would or would not be sent to Korea. One day they are hinted to be Korea bound. The next day a statement is issued saying they are to remain in Japan to guard security there.

Perhaps there is good reason for silence as to the combat use planned for these troops. Guardsmen could understand the security value of silence far better than constantly conflicting statements as to their status. The confusion has a bad effect at home as well as in Japan. It affects the emotional status of families throughout southern California.

Loudest complaint from the guardsmen, however, comes from conflicting statements and policies regarding their return to civilian life.

"Our officer morale, as you can imagine, is at rock bottom," one guardsman writes. "We'd like to know just what we can expect our tour of duty to be—barring a full-scale war. Are we in for 17, 21, or 24 months?"

General Marshall is reported to have told the guard officers they are in for 17 months. Ranking officers claim the term of service for both enlisted men and officers is 24 months. Some reports from the Department of Defense give the Californians indications their term is 21 months.

If policy has been made, it has not been clarified for the men involved.

Naturally all of the guardsmen would like to get home as soon as possible. They have been embittered by seeing some services discharge faster than others and by finding even in their own ranks that some will get out earlier than their buddies.

These are civilians sacrificing to serve their country. The very least that can be done for them is for the Department of Defense to clarify their status. A halt should be called to this barrage of conflicting statements.

Joint Accounting Improvement Program

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. CANNON. Mr. Speaker, in accordance with permission heretofore granted I am submitting herewith an exchange of letters between myself and the Comptroller General.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON APPROPRIATIONS,
EIGHTY-SECOND CONGRESS,

Washington, D. C. October 19, 1951.

Hon. LINDSAY C. WARREN,

Comptroller General of the United States,
Washington, D. C.

DEAR MR. COMPTROLLER GENERAL: I have been following with considerable interest the recent developments in the audit program of the General Accounting Office, particularly the expansion of comprehensive and other agency audits at the site of operations which should lead to much more informative and useful results of audits. I understand that this program and your joint accounting improvement program are incorporated in the Budget and Accounting Procedures Act of 1950 and the Post Office Department Financial Control Act of 1950.

One of the most urgent needs of the committee is timely and independent analysis of agency operations of the nature contemplated by your new program. It is therefore my

hope that this program can be developed with such need in mind. While I realize that the program has not arrived at the point where an annual audit report of each agency would be feasible, I believe much could be accomplished by annual reports wherever appropriate of significant findings of your auditors during the course of audits and other examinations, to be made available to the committee in time for the commencement of its hearings at each session of the Congress.

I would appreciate your consideration of this question, and, if you agree with the ideas expressed herein, the assignment of members of your staff to consult with the staff of the committee in working out details which would assure the committee maximum and prompt benefits of your audit operations.

Sincerely,

CLARENCE CANNON,
Chairman.

COMPTROLLER GENERAL OF
THE UNITED STATES,
Washington.

Hon. CLARENCE CANNON,
Chairman, Committee on Appropriations, House of Representatives.

MY DEAR MR. CHAIRMAN: I have your letter of October 19, 1951, stating that one of the most urgent needs of your committee is timely analysis of agency operations of the nature contemplated by our new audit program, and expressing the hope that the program can be developed with such need in mind. Your letter expresses the belief that while the program has not arrived at the point where an annual report of each agency would be feasible, much could be accomplished by annual reports, wherever appropriate, of significant findings of our auditors during the course of audits and other examinations to be made available to the committee in time for the commencement of its hearings at each session of the Congress.

Some time ago, I became convinced that, in order to fully carry out the responsibilities of the General Accounting Office as an agency of the Congress, along with improving accounting in the Federal Government, the scope of the audit should be extended beyond the accountability for funds. To supply this need and satisfy the requirements of recent legislation, the "comprehensive audit" approach was devised. Such an audit is conducted to the extent practicable and adequate in accordance with generally accepted auditing principles and standards applicable to the audits of commercial enterprises. Its scope includes an audit of receipts, expenditures and application of public funds, the verification of assets, liabilities, proprietary accounts and operating results, and the examination of individual transactions to the extent deemed necessary in the circumstances for determining compliance with all applicable laws, regulations, and decisions, with authority and responsibility to state exceptions and raise charges where necessary. An important element in this audit program is the appraisal of the methods employed in operating the accounting system and the effectiveness of internal control and related practices in the agency under audit.

The comprehensive audit has been initiated in about 20 Government agencies or major parts of agencies. In addition, site audits of certain types of expenditure and activities are being conducted at numerous points in the field.

The present approach to our audit responsibilities, and the specific authority in the Budget and Accounting Procedures Act of 1950 and the Post Office Department Financial Control Act of 1950, should go far toward producing information of the type which would be helpful to your committee—information which was not readily obtain-

able under the older and more centralized audit processes previously in effect.

I am sure you will understand the results contemplated under our new program cannot be expected immediately, for several reasons. In the first place, in many cases there are not yet available in the agency under audit the kinds of books, records and accounts needed to make a full disclosure of the agency's financial operations and enable an effective and prompt audit. Improvements in audits must go hand in hand with improvements in agency accounting systems. These improvements are being worked out in the agencies on a cooperative basis with the General Accounting Office, as contemplated by the accounting provisions of the Budget and Accounting Procedures Act of 1950. In the second place, a considerable length of time is required to analyze the basic legislation and operations of the agencies under audit in order to enable a determination whether programs are being carried out in the manner intended by the Congress and within other legislative requirements. Finally, the personnel of the General Accounting Office working on audits are not all of the type needed for making comprehensive audits. The rate of further expansion of the program will depend substantially upon our ability to obtain qualified personnel. This does not mean an increase in personnel. It is my hope that it will ultimately result in less personnel. It does mean a change in type of personnel.

We have also, as you know, reorganized our investigative staff, one of its important functions being to survey throughout the country selected expenditure programs particularly to test their effectiveness, from a fiscal standpoint, and their conformance with their legislative charter and the departments' representations to the Appropriations Committees and the Congress.

I will be happy to have our audit and examination program take account of the needs expressed in your letter, and to cooperate with your Committee to the fullest extent practicable in seeing to it that significant findings during the course of each year growing out of our comprehensive and site audits and other examinations of agency financial transactions and operations are made available to the Committee before commencement of the Committee hearings each year. I will be glad to have members of my staff join with the staff of your committee in working out the mechanism for accomplishing the results we both have in mind.

Sincerely yours,

LINDSAY C. WARREN,
Comptroller General
of the United States

Winning the War of Ideas

EXTENSION OF REMARKS OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. DEANE. Mr. Speaker, I ask unanimous consent to insert in the CONGRESSIONAL RECORD the following statement, which I have presented personally to President Truman, covering my observations in connection with a recent mission to Europe:

Three weeks in Europe—September 27 to October 18, 1951—10 days of which were

spent at Caux, Switzerland, attending a World Assembly of Moral Re-Armament, the remaining days in West Germany, the Netherlands, England, and Scotland, impressed me with the fact that in this war of ideas—democracy versus communism—America is on the defensive. The mission to Europe showed me how the United States can help democracy take the offensive.

These observations represent my own personal views:

UNITED STATES FIRST JOINT WEST COAST SHIPPING DELEGATION INITIATES TRIP TO SEEK ANSWERS TO WORLD-WIDE PORT DIFFICULTIES

This mission to Europe originated during the Japanese Peace Treaty Conference. I brought together officials of the Pacific Maritime Association and representatives of Moral Re-Armament. Attention was directed to the settlement of serious strike difficulties covering a period of years within the National Airlines, through the application of the moral standards of Moral Re-Armament. Threatened with dismemberment by the Civil Aeronautics Board last year, National not only settled its labor difficulties but attained sufficient financial strength so that it has petitioned the CAB to reduce its air-mail subsidy, looking toward the elimination of all Federal subsidy.

Thereafter, a joint delegation of American shipowners and longshoremen flew to Europe to observe the effect of Moral Re-Armament in solving industrial disputes. The objectives were to enable these representatives of American management and labor to meet shipping and dock leaders from other countries and to develop a democratic strategy of teamwork for the ports of the world, having in mind especially the prevention of further costly disturbances on the west-coast waterfront.

Mrs. Deane and I, together with a group of men and women interested in Moral Re-Armament, accompanied the delegation at our own expense. The trip was made possible through the Pacific Maritime Association covering the expenses of the management representatives. The union men met in part their expenses, and the remainder was covered by the sacrificial giving of those of us who believe that Moral Re-Armament will unite men and nations on a plane above the conflict of party, class, or political philosophy.

SWITZERLAND: WORLD EVIDENCE OF AN ANSWER TO COMMUNISM AT THE MRA ASSEMBLY AT CAUX

During this summer 10,100 people from 88 countries, including cabinet ministers, members of 19 parliaments, and other key political, industrial, and labor leaders from many areas of the world came together at Caux to seek and to find answers to communism and industrial conflict.

Among those with whom we had an opportunity to confer at this session were the following:

Senator Paul Kalb, vice president of the French Senate.

Mr. Maurice Mercier, national secretary of the Textile Workers' Union of France.

Dr. Oskar Leimgruber, chancellor of the Swiss Confederation.

Dr. Heinrich Hellwege, German Federal Minister for Affairs of the Upper House.

Dr. Heinrich Kost, chairman of the German Coal Board.

Mr. Hubert Stein, national executive member of the German Mineworkers Union.

Mr. F. W. McNeil, president, Auckland branch, New Zealand Harbor Board Employees Union.

His Excellency Quinto Quintieri, vice president of the Italian Confederation of Industry.

Mr. Hans Bjerkholt, a founder of the Norwegian Communist Party.

Others we met included two members of the Iranian Parliament and an official from the Abadan refinery, a group of 40 from behind the iron curtain, including a former Soviet officer from the Urals, a delegation of Moslems from Soviet Turkestan, and a man who sat on the Central Committee of the Communist Party in the U S S R, and was Deputy Commissar for Forests in the Soviet Government from 1929 to 1932, plus representatives of nearly all the Soviet satellite countries.

Among those from industry were delegations of workers and management from the factories, mines, docks, and transport industries of Western Europe, from the strategic areas and industries of northern Italy, the Ruhr and Berlin, northern France, the Vosges region, and the Red Belt of Paris, every industrial area of Britain, the iron mines of Sweden, the shipyards, hydroelectric plants, and copper mines of Norway, the blast furnaces of Holland, and the machine industry of Switzerland.

There were at Caux up to the time we left 213 industrial delegations from 203 factories and mines employing 1,025,300 workers, 1,373 workers and trade-union officials, 907 Marxists, 202 Communists, 416 management representatives.

Dockers' leaders attended from 16 ports in 10 countries: Hamburg, Bremen, Genoa, Antwerp, London, Avonmouth, Liverpool, Glasgow, Auckland, Melbourne, Rouen, Copenhagen, San Francisco, Los Angeles, Rotterdam, Amsterdam.

Representing the French Federation of Textile Workers, Mr. Maurice Mercier told the assembly of the successful negotiations for wage increases of 15 to 16½ percent for the 648,000 workers in the French textile industry. These negotiations had united the Force Ouvriere, Catholic unions, and the foremen's unions, thereby thwarting an anticipated Communist effort to disrupt the industry.

Mr. Raymond R. Zimmerman, Assistant Director of the Technical Assistance Division of ECA, who came to Caux reported that he and his colleagues on a European inspection tour came upon "example after example of labor-management cooperation" in the north of France. His ECA associates said, "Zimmerman, what a wonderful combination if Moral Re-Armament and the Marshall plan could team up for a better life."

At Caux, Mr. Zimmerman said, "This has been a new experience for me, and I have got a glimpse of the potentialities of Moral Re-Armament that I never saw before. I find you not fighting communism. You are not fighting anything, but you really stand for something. You stand for change-for change in our personal lives, in our home lives, in our community, in our nation, and in the world--and this is an order that all classes can rally to. It has been of profound importance to me to be here to meet you."

Mr. A. B. Tichenor, vice president of Matson Navigation Co., a leader of the official delegation from the Pacific Maritime Association, representing 27 steamship lines and 40 stevedoring companies, stated, "On the basis of what's right instead of who's right a new era of understanding can come to the west coast maritime industry and to the world as a whole."

Representing labor, Mr. Chester Hardister of San Francisco, vice president of the 5,500 members of Local 10 of ILWU, who has one son in Korea and another in Germany, added, "For the first time I felt at Caux that there is a fighting chance to avoid a third world war through the universal ideology of Moral Re-Armament."

Personally I can say that I learned more in my time at Caux about foreign affairs than in all my previous experience. I feel that our expenditure of \$60,000,000,000 for defense this year will not do the job unless it is backed by a change in Americans which

will reflect superior moral standards and a way of life convincing to Communists, such as I found at Caux. I was impressed to hear a great many men and women, who for 10 and 20 years had been leaders in the Communist Party, tell how they had come in contact with MRA, accepted moral standards in their own lives and changed, and are now changing other Communists.

Dr. Frank N. D. Buchman, who presided at most of the sessions, is right in saying that anticommunism is not an effective way to master communism. "Many people are against it," Dr. Buchman said, "but they live a personal life that is for it. The true battle line in the world is not between East and West but between right and wrong. We need a superior ideology that works, so that everybody says, 'That's it.' Unless America recovers her rightful ideology, nothing but chaos awaits us. Our destiny is to obey the guidance of God and live by absolute moral standards of honesty, purity, unselfishness, and love, personally and nationally."

GERMANY: THE IDEOLOGICAL AND MORAL FACTOR IS VITAL IN THE CONSIDERATION OF EVERY ECONOMIC, POLITICAL, AND MILITARY QUESTION IN WESTERN GERMANY

Going to Bonn from Caux, Dr. Heinrich Hellwege, Minister for Affairs of the Upper House of the West German Federal Republic, arranged for me to see Chancellor Adenauer at his residence. The Chancellor asked me to bring his personal greetings to President Truman. He expressed a deep conviction and appreciation of what Moral Re-Armament had meant to Germany, saying it "had become a household word" in his country.

The Chancellor also wished to thank America through me for what the CARE parcels had meant to the German people, reflecting the giving of America's heart as well as economic aid. Even the ECA-built multi-million-dollar bridge over the Rhine near Cologne had not elicited the same response as the caring shown by individual Americans for the physical and moral well-being of the German people.

Our frank discussions included the serious lack of coal in Germany. The Chancellor had been without coal in his own home. The shortage was influencing the thinking of the average German miner. The feeling prevails among the miners, why produce coal and return to cold homes? I was advised by the head of the German Coal Board that not more than 1 ton of coal would be available to each German mining family this winter.

This economic factor is playing into the hands of the Soviet's ideological propaganda. Because of this and other economic hardships, Dr. Hellwege was of the opinion that the government might lose if an election were held at the present time. My observation is that another government might not be so favorable to the Western Europe defense program.

Mr. Hans Duttling, director of the Gelsenkirchen Coal Mining Co., with 82,000 employees, which produces one-fifth of the entire Ruhr output, and Mr. Paul Dikus, chairman of the works council in Duttling's mining group, gave credit to Moral Re-Armament for settling a Communist-inspired strike which threatened to tie up the entire Ruhr.

Hamburg's largest shipyard, Deutsche Werit, has a backlog of 500,000 tons on order. In this city were the homes of many of the former Communists we had met at Caux.

During my visit to Western Europe, I gained the impression from representative citizens from every strategic area that the real question is not whether the people of Western Europe will fight, but whether the United States, as initiator of NATO, will give them an idea big enough for which to fight. Few will fight Soviet materialism merely to

defend American materialism. My observations convince me that, unless America provides this idea at once, in the event of a serious emergency American youth would have to bear the brunt of any major military operation that might develop in Europe.

THE NETHERLANDS: SUBSTANTIAL POSTWAR ECONOMIC RECOVERY AND RECONSTRUCTION ARE ENDANGERED BY LOSS OF FOREIGN MARKETS AND ACTIVE COMMUNIST STRENGTH

In the Netherlands my visit to The Hague and the great ports of Amsterdam and Rotterdam revealed marked economic recovery, but a seeming lack of awareness of any emergency. Despite the fact that the second-place Communists polled 25.7 percent in the prosperous city of Amsterdam, very few people expressed any concern with potential Communist strength. Naturally in such a situation there was little popular evidence of readiness to support general European military operations.

Some key industrialists, like Mr. Frits Philips, of the largest electrical company in Europe, under the influence of Moral Re-Armament are furnishing a new type of industrial leadership and contradicting Stalin's caustic comment, "When did the managers ever put principles before profits?"

ENGLAND: ELECTION RESULTS WILL NOT BRING UNITY UNLESS THE SPIRIT WHICH AVERTED THE 1951 DOCK STRIKE BECOMES NATION-WIDE

We arrived in London just prior to the general election. In historic Clive House, Dr. Buchman's home in London, we met Labor, Conservative, and Liberal Party leaders. I talked personally with them and with Mr. Arthur Baker, chief of the parliamentary staff of The Times. They were agreed, in advance of the voting, that the fundamental problems, political, social, and economic, facing the country could be solved only by a national moral and spiritual awakening regardless of which party won.

These representatives of British political life, like myself, were conscious of the fact that both the Conservative and Labor Party leadership were in danger of becoming so absorbed in their own political battles that they would be blind to the strategy of anti-American, pro-Soviet efforts to take control of Britain's industrial and political leadership.

Dock leaders, who have been admitted tools of such a strategy in the past, told me in their homes how the acceptance of moral standards had clarified their loyalties. We sat in on their meeting with steamship operators, and I heard how union officials, former Communists now trained in Moral Re-Armament, had averted successfully a Communist-inspired strike last March that threatened to tie up the ports of the United Kingdom.

Britain faces great economic problems, but as a visitor I should like to pay tribute to the stride she has made in her rebuilding program, especially workers' homes, and the fact that her postwar exports now are around 175 percent of her prewar exports.

Before leaving London I had an opportunity to pay my respects to Mr. Walter Gifford, United States Ambassador, to Lord Pakenham, then First Lord of the Admiralty, and met many old friends.

SCOTLAND: POLITICAL STRIKES ARE NO LONGER A THREAT TO THE PORT OF GLASGOW, WHERE MORE SHIPS ARE UNDER CONSTRUCTION THAN IN THE WHOLE OF THE UNITED STATES

In Glasgow, Sir Patrick Dollan, wartime Lord Mayor of the city, asked me to convey messages to President Truman.

We had an opportunity to inspect the docks and shipyards, and met such union leaders as Mr. Tom Christie, chairman,

dockers branch, Scotland Transport and General Workers Union, for many years a member of the Communist Party, who had changed completely his philosophy and was now applying the principles of Moral Re-Armament in the settlement of all grievances and differences which arose between him and the ship-owners. Several years ago this port was known as Red Clydeside, but today political strikes, according to Christie, no longer are a threat to the port.

A few hours by air brought my wife and me, with the west coast shipping delegation, back to New York. There we found the docks paralyzed by a serious strike. Our experiences at Caux and on the waterfronts at Hamburg, Rotterdam, London, and Glasgow convinced us that there is an answer. As an American, I trust that this answer may be applied in time.

CONCLUSIONS

In conclusion I should like briefly to summarize my impressions of this most interesting and informative trip:

1. Our group was particularly appreciative of the kindness shown and services given us by our Foreign Service personnel in the various countries we visited.

2. The Moral Re-Armament Assembly center at Caux provides a unique source of world information which should be more widely recognized and used by United States officials.

3. Communists can and are being changed in such large numbers that it offers a new factor in democratic world strategy.

Evidence at Caux, strengthened and confirmed by our trip through Germany, the Netherlands, and the United Kingdom, convinced me that the Soviet evaluates Moral Re-Armament correctly as a force in the free world which has launched an ideological offensive of world-wide proportions, and which I believe will master communism.

Three important instances from Germany, France, and Britain showed the results that can be expected from such a democratic counter-strategy.

(a) The stoppage of the Red-led strike in the Nordstern mine, key coal pit in the Ruhr, which blocked the Communist program of a general tie-up of German coal and steel production in November 1950;

(b) The MRA-inspired labor-management teamwork in successfully concluding wage negotiations in the giant French textile industry, in October 1951, before the Communists could launch their expected efforts to seize control; and

(c) The prevention of a general dock strike in the United Kingdom in March 1951, part of Communist strategy to cripple British economy, through the change of Scottish and London port workers' leaders.

4. A strong and friendly Western Germany is essential to the defense of free Europe.

Coming from San Francisco, where I saw signed a peace of reconciliation with Japan which established an historical precedent in the application of Christian principles to international settlements, I was struck by the lack of such a spirit in some of our relations with the new German Republic. I could not help but recall a statement made by President Franklin D. Roosevelt in a letter shortly before his death: "We shall win this war and in victory we shall seek not vengeance but an international order in which the spirit of Christ shall rule the lives of men and nations."

My talks with Chancellor Adenauer and other German leaders convinced me that we may have been shortsighted in our handling of certain problems. Dismantling has ended but the controls on coal and steel outputs have created hardships and impeded industrial progress in Western Germany. There are many factors involved, both political and

economic, and I do not wish to be too critical, recognizing as I do the general coal shortage throughout Europe and the special needs of France and Luxembourg for coal.

When Germany is operating under the Schuman plan, these matters will be largely under her control, but I do submit that the coal situation in Western Germany today is deserving of our further careful study and perhaps rethinking. The required exportation of approximately 6,000,000 tons of German coal each quarter and the importation by Germany at higher prices of approximately the same quantity each quarter is a cause of irritation and unrest, which is being exploited by the enemies of both our countries. The proper solution of this coal import-export problem has immediate ideological as well as economic implications for Germany and all of Western Europe.

5. The ports of the world must be kept open

The strategy of the subversive forces in every country is to paralyze shipping and thereby break the lifelines of trade which hold together the free nations. Everywhere we find attempts to promote chaos by destroying commerce through port dislocations. The results achieved by changing Communist dock leaders to an acceptance of a superior ideology in such ports as London, Glasgow, Auckland, and Rotterdam have been practical and far reaching. Strikes have been averted and goods have been kept moving.

It was the basis of confidence established through MRA between dock leaders in British and New Zealand ports which clarified the real situation and enabled Auckland ships, falsely labeled "black" by Communists, to be unloaded on their arrival in United Kingdom ports early this year.

The real cause of conflict, when political questions are recognized and eliminated, is the selfishness and resentment of both sides. When these human, as distinguished from political, problems are honestly faced and dealt with on a basis of not who is right but what is right, every difference and strike is capable of an immediate and just settlement.

Such can be the experience of our country in east coast, west coast, and Gulf ports, when ship operators and union leaders apply the lessons which the delegation I accompanied learned at Caux.

It is not economics nor politics which are involved in the world struggle of today, but basically a conflict of ideas, namely, whether the ideas of our founding fathers based on moral standards and the guidance of God shall prevail or whether they shall succumb to the ideas of a ruthless, challenging, and godless materialism.

6. Anti-Americanism is running high in Europe, but this tide can be turned by creating a new moral climate at home and abroad.

I found on my trip that America is unfortunately not highly regarded in many quarters in Europe, despite the huge amounts we have invested in economic and military programs. For example, since World War II we have appropriated \$390,000,000 for our State Department information programs. What concerns me is that it is not reaching the people we want to reach and changing their thinking.

Likewise, the House of Representatives has appropriated \$1,727,500 for the Committee on Un-American Activities, which I have supported. Yet, so far as I know, we have not changed the thinking of a single Communist.

If we are to reach the millions across the world and change Communists in their thinking and living, we in America must give a superior moral ideology which will answer the deepest needs of their hearts and homes, which will give them a valid hope for

a world of peace, plenty, and progress, and which will give each one of them a part in building that new world. But we cannot give such a moral ideology unless we live it first ourselves. Our weakness on the ideological front is related to the moral breakdown in our own country. The future depends not on what a few men decide to do in Europe, but on what a million men decide to be in America.

In summary, it seems that America has been relying on a three-dimensional defense, namely, political, economic, and military, to meet the U. S. S. R.'s four-dimensional threat. In addition to building strength on those three fronts, the Soviets have become experts in ideological warfare, the battle to capture the hearts and minds of men. Foreign Minister Vishinsky declared at a Soviet rally in East Berlin, "We shall win the next war not with atom bombs but with our superior brains, ideas, and doctrines." To meet this challenge we must implement the words of President Truman, who said, "The struggle for the minds of men is not separate and distinct from other elements of our foreign policy * * * It is as important as armed strength or economic aid."

Nehru Tells ADA India Also Seeks Survival of Freedom With Peace

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KLEIN. Mr. Speaker, it is with great pleasure that I insert in the RECORD, under leave, a letter from Jawaharlal Nehru, Prime Minister of India, reassuring western liberalism that India has not faltered. On October 3 a letter to which 61 American liberals, including myself, had subscribed our names was dispatched to the Prime Minister, attempting to convey to him the doubts raised by India's seeming equivocation. Both that letter and the Prime Minister's reply are here presented for the reassurance of the American public.

Mr. JAMES LOEB, Jr.,
National Executive Secretary,
Americans for Democratic Action,
Washington, D. C.

My DEAR MR. LOEB. I have received the letter, dated October 3, signed by a number of distinguished American nationals, a copy of which you have been good enough to transmit to me through our Ambassador in Washington. I appreciate the spirit that prompted the signatories to address me as they have done.

India's foreign policy has been repeatedly explained by me in a number of speeches, including some that I delivered in the United States during my visit in the fall of 1949, a visit of which I have happy recollections. India's attitude toward aggression, from whatever quarter it may come, was explained by me in my address to the Congress of the United States of America, from which I quote the relevant passage:

"We have to meet aggression and to resist it and the force employed must be adequate to the purpose. But even when preparing to resist aggression, the ultimate objective, the objective of peace and reconciliation, must never be lost sight of, and heart and

mind must be attuned to this supreme aim, and not swayed or clouded by hatred or fear."

This remains India's position. Our policy is not neutralist but one of active endeavor to preserve and, if possible, establish peace on firm foundations. On fundamental issues, such as the liberty of the individual and the rule of law, there is no difference between India and other like-minded countries. It is only as regards the methods to be employed to achieve the purpose that you have felicitously described as "the survival of freedom with peace" that differences exist, and as I have explained at length in my public pronouncements, there is both room and justification for such differences. With the governments and peoples of the western democracies, we sincerely desire and ceaselessly work for full cooperation in the cause of liberty and peace.

Yours sincerely,

JAWAHARLAL NEHRU.

YOUR EXCELLENCY. We, the undersigned American liberals, joined together 4 years ago to express publicly our common rejoicing that the Indian people had finally achieved their independence. We had long sympathized with the Indian struggle for nationhood. We had long looked to you, Pandit Nehru, and to the movement which you head to give moral as well as political leadership to the contemporary world, as your great teacher and comrade. Mahatma Gandhi, had previously done. We would be less than honest today if we did not confess that recent events have raised serious questions in our minds.

These questions are so grave that we cannot forbear laying them directly before you. The overriding moral question of our age, it seems to us, is the struggle between freedom and totalitarianism. Freedom, it is true, remains too often still an aspiration; a free society may be defined only as a society where that aspiration has some real basis in hope and striving. But a totalitarian society must be defined as a society where that aspiration is wholly and cruelly extinguished. If the option of individual dignity is to be kept open, all men of good will must unite to check the spread of totalitarianism.

This is the moral problem of our age as we American progressives see it. We know that millions of Europeans see it in these same terms. We know that many Asians—including many Indians see it in these same terms. Yet, in this crisis which strikes at the roots of civilized survival, we are fearful that the Indian Government is following a policy which ignores this overriding issue.

We find it tragic indeed that a great people such as yours, having fought for generations, and fought successfully, for its own freedom, should now, having attained it, seem blind to the grave threat to freedom in other parts of the world.

We would make clear that we share your profound concern lest another world war should ravage the earth. The survival of freedom with peace is the supreme political problem of our times. We are confident, however, that the unity of the free nations in strength is the surest promise that war can be averted.

We appreciate too the special problems of India. We fully recognize that the form and manner of India's participation in the struggle against Soviet totalitarianism cannot be the same as that of nations in different geographical or military circumstances.

But India's present position in world affairs raises irresistible questions. Does your Government, in fact, see no moral issue between the democratic states and Soviet totalitarianism? Do you recommend your own present neutralist course to the ordi-

nary men and women of Europe and America? Or, as it sometimes appears to us, is your present course made possible by the shield raised against Soviet aggression by other nations?

Our sense of fellowship with progressive-minded Indians is as great as ever. We share with them the conviction that the present living standards of millions all over the world must be raised if freedom is to be defended, and we know that our own country must accept a major share in this responsibility. But we know, too, that this task will be impossible unless the peoples of the free world stand firm and united in opposition to Soviet aggression.

We have respected and welcomed the frankness with which you and other Indians have commented on American policy. By the same token, we feel that we would not be true to the vision of freedom we all share if we were not equally candid with others. It is in this spirit that we send this communication to you.

Following is a list of the signers of the letter to Prime Minister Nehru:

Jack Altman, vice president of United Wholesale and Retail Workers, CIO.

Ernest Angell, distinguished lawyer, national chairman of the American Civil Liberties Union.

Paul H. Appleby, dean of the school of public administration, Syracuse University, former Under Secretary of Agriculture.

George Boldanz, vice president, Textile Workers Union of America, CIO.

Robert Bendiner, free lance writer, author of the Riddle of the State Department.

Andrew J. Biemiller, labor adviser to the Secretary of Interior, former Congressman from Wisconsin.

Barry Bingham, editor of the Louisville Courier-Journal.

Dr. L. M. Birkhead, director of Friends of Democracy, Inc.

Wayne Coy, Chairman, Federal Communications Commission, formerly administrative assistant to President Roosevelt.

A. Powell Davies, pastor of the All Souls Unitarian Church, Washington, D. C.

William H. Davis, distinguished attorney, former Chairman of the War Labor Board.

Emily Taft Douglas, formerly Congresswoman at Large from Illinois.

Paul Douglas, United States Senator from Illinois.

Angus Dun, Episcopal bishop, Washington, D. C.

Herman P. Eberharter, Congressman from Pennsylvania.

George Edwards, formerly president of the Common Council of the City of Detroit.

Maj. George Fielding Elliot, nationally known columnist.

Hugo Ernst, president, Hotel and Restaurant Workers, A. F. of L.

William T. Evjue, editor of the Capital Times, Madison, Wis.

George Field, director of Freedom House.

Rev. George B. Ford, Corpus Christi Church, one-time Catholic chaplain, Columbia University.

Walter K. Granger, Congressman from Utah.

Arthur Garfield Hays, distinguished attorney for American Civil Liberties Union.

Leon Henderson, former chairman of the Americans for Democratic Action, former Administrator of the Office of Price Administration.

Daniel W. Hoan, former mayor of Milwaukee.

Laura Z. Hobson, author of Gentlemen's Agreement.

Sal B. Hoffmann, president of the Upholstery Workers Union, A. F. of L.

E. Palmer Hoyt, editor of the Denver Post.

Hubert H. Humphrey, United States Senator from Minnesota.

Henry M. Jackson, Congressman from Washington.

Paul Kellogg, editor of Survey Graphic.

Arthur G. Klein, Congressman from New York.

Mrs. Albert D. Lasker, leader in the field of health insurance.

Alfred Baker Lewis, president, Union Casualty Insurance Co.

Howard Lindsay, well-known playwright and actor.

Francis McConnell, bishop of the Methodist Church.

Ralph McGill, editor, Atlanta Constitution and Journal.

B. F. McLaurin, international field organizer, Brotherhood of Sleeping Car Porters, A. F. of L.

Edgar Ansel Mowrer, foreign correspondent.

James F. Murray, United States Senator from Montana.

Philip Murray, president of the Congress of Industrial Organizations.

Reinhold Niebuhr, dean of Union Theological Seminary.

E. L. Parsons, Episcopal bishop, California.

Drew Pearson, newspaper columnist and radio commentator.

Ronald Reagan, president of the Screen Actors Guild, A. F. of L.

Emil Rieve, president of the Textile Workers Union, CIO.

Alex. Rose, president of the United Hat, Cap, and Millinery Workers Union, A. F. of L.

William Scarlett, bishop of the Episcopal Church, St. Louis.

A. M. Schlesinger, professor of history at Harvard University.

A. J. Schlesinger, Jr., professor of history at Harvard University and author of the Age of Jackson and the Vital Center.

Boris Shishkin, chief economist of the American Federation of Labor.

James T. Shotwell, president emeritus, Carnegie endowment for international peace.

Lillian Smith, author of Strange Fruit and Killers of the Dream.

Mark Starr, educational director, International Ladies' Garment Workers' Union, A. F. of L.

Adlai E. Stevenson, Governor of Illinois.

Benton J. Stong, legislative director of the National Farmers Union.

Richard L. Strout, Washington representative, Christian Science Monitor.

Robert E. Wagner, Jr., president of the Borough of Manhattan.

Arnold Zander, president of the State and County Municipal Workers Union, A. F. of L.

Max Zaritsky, former president of the United Hat, Cap, and Millinery Workers Union, A. F. of L.

What the Kremlin Fears Most

EXTENSION OF REMARKS

OF

HON. CHARLES J. KERSTEN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. KERSTEN of Wisconsin. Mr. Speaker, under general leave granted to extend remarks, I hereby include the following article from the Saturday Evening Post:

WHAT THE KREMLIN FEARS MOST

(By Maj. Gen. J. F. C. Fuller, C. B., C. B. E., D. S. O.)

CROWBOROUGH, SUSSEX, ENGLAND.—Are not you in America somewhat blindly assuming

that the next war is going to be much like the last—a war of unconditional surrender enforced by the threat of annihilation? It would seem that you are, for you are pouring out your dollars on the production of lethal things as if you were a golden Niagara.

You are supreme at sea; you have already hundreds of warships in commission, besides great fleets in mothballs. You are supreme in the air, or soon will be, for your goal of 50,000 aircraft a year is steadily advancing. You have an army 1,000,000 strong, which in firepower and equipment is incomparably superior to any numerically equivalent Russian force. At no very distant date you will be turning out tanks at the rate of 100 a day. Probably by now you have stockpiled 1,000 atomic bombs and have in store other mass-destroying weapons quite unknown to the public. You have new types of rockets, new radar and new guided missiles; and atomic-powered artillery, nuclear-driven submarines and the hydrogen bomb are, so it would appear, not far around the corner.

You are spending on your Armed Forces more than 18 times as much as we are in Great Britain. Your industrial potential borders on the miraculous. You have, as it has well been said, "both guns and the whole cow," and the roar of your engines reverberates round the world. You are its modern Titans; soon in one brief battle you will be able to unleash the destructive energy of the whole of the last war. Nevertheless, do not forget that, in spite of their might, your classical prototypes ultimately landed themselves in Tartarus.

In assuming that the next war will primarily be a physical struggle, and that, therefore, physical force will be the open sesame of victory, are not you taking too much for granted? Out of your Volcanic lives cannot you set aside a bare half hour in which to ask yourselves the first of all military questions: What is the problem?

Apparently not, for you gaze into the Russian shop window, in which everything is decorated with the finel of propaganda, and for some inexplicable reason you shy off from boldly walking into the shop itself. Yet it is the things within it which will tell you what the problem is, and, should you spare a little thought, will suggest to you its answer.

Among other things in the window is displayed a map of the Bolshevik ideological empire. It is greater than Genghis Khan's, for it covers more than a quarter of the land surface of the globe, stretching from the Arctic Ocean to the Himalayas and the China seas and from the River Elbe to the Pacific. It includes about 33 percent of the inhabitants of the world. It also is titanic.

But were you to go into the shop itself, you would find that everything displayed in the window is a fake or a lie. For in 1917 Lenin introduced a new philosophy. He took the basic maxim of Western civilization—"The truth shall make you free"—and inverted it. Thus in the Bolshevik vocabulary every word is perverted; a lie is called the truth, and truth is denounced as a lie, police terror is called democracy, serfdom is called freedom, conquest is called liberation, subjection is called self-determination, and the Political Bureau of the Bolshevik Party is called the proletariat, in the interest of which all individual freedom and national rights are suppressed.

Why has this policy of confounding the meaning of words been adopted? The answer is: That the nations "may not understand one another's speech." It is the story of the Tower of Babel Bolshevikized.

The very name the Russian empire now bears—namely, Union of Soviet Socialist

Republics—is a lie; for the U. S. S. R. is not a union of republics as it is proclaimed to be; instead it is the compulsory serfdom of nearly 200 subjugated peoples, speaking different languages and stemming from different cultures, each one held in leash by terror. Yet in this there is nothing new, for as the pan-Slavism of Czarist Russia was but a catchword for Russian imperialism, so today communism is but the catchword for Bolshevik imperialism—the most ruthless the world has ever known.

FAILURE OF THE RUSSIAN ECONOMIC SYSTEM

Therefore communism is also a lie, it is but Marxian grease paint superimposed on a fundamentally unchanged historic Russian face. Though it is true that, in 1917, Lenin attempted to impose Marxist communism on Russia, by 1921 it had produced such confusion that to save himself he introduced his new economic policy. It was out of his failure and not out of his success that, under Stalin, there emerged a mixture of state capitalism and Asiatic despotism which, depending as it did on slave labor, was so inefficient that it could not compete with the so-called capitalist world—that is, with free enterprise. Therefore, in order that Bolshevism may survive, free enterprise must be destroyed. Today Marxist communism is solely for export, because it is the solvent of free enterprise, and its precipitate is chaos, the prerequisite for the establishment of a pistol-ruled (Bolshevik) world.

Except in the concentration camps, there are now no Communists in the U. S. S. R. Of its 193,000,000 inhabitants, some 3½ percent are state bureaucrats—a highly privileged class—and the remaining 96½ percent are state serfs who, unless free enterprise throughout the world is destroyed, may one day wake up to the fact that they are living under a lie, and, in consequence, liquidate their oppressors.

The crucial fact is that the Soviet Union cannot indefinitely continue to exist side by side with a system of vastly greater productivity, and how unproductive that union is may be seen in its low participation in world trade even before the upheaval of the last war. Though in 1938 the foreign trade of Finland and the Baltic States, with a combined population of under 10,000,000, amounted to \$536,000,000, with its then 170,000,000 inhabitants the foreign trade of the Soviet Union was \$74,000,000 less. Another pointer is to be found in the Berlin blockade. Why did the Kremlin impose it? The main reason was in order to prevent the Eastern Germans from seeing that Western Berlin was more prosperous than their own territory. It is its lies which so constantly dictate Soviet policy—and, in consequence, render it difficult for Western peoples of a totally different morality to understand.

The contents of the shop reveal that there is no unity within the U. S. S. R.; instead, discord both latent and active. Like the Turkish Empire of the nineteenth century, the U. S. S. R. is a mosaic of subjugated peoples. According to the 1939 Russian census, out of a total population of 170,467,186, 58 percent were Russian and 42 percent non-Russian. Also, as in the old Turkish Empire, the Kremlin is attempting to solve its problem of national assimilation by genocide—that is, by massacring and deporting the indigenous peoples of the subjugated countries as well as diluting them with those of Russian stock. The consequence is that, though discontent is normally inarticulate, it is nevertheless universal.

All refugees tell the same story: That the U. S. S. R. is seething with unrest and that behind the iron curtain everything is in ferment. Between August 1945 and August

1950, no fewer than 15,000 Russian officers and men deserted to Western Germany, and monthly around 20,000 Eastern Germans and others cross the Western German border. Another proof is the steady increase in the number of Soviet prisons. Not long ago, one of the refugees, a former director of Soviet prisons, stated that, "Whereas in 1920 there were 3,450 prisons in the Soviet Union, in 1950 the number had risen to 11,760."

Nor is the Russian Army unaffected. Since 1919 not only has its structure been shaken by contact with the west but many of its soldiers have become disillusioned. A typical case is that of Lieutenant Bystrov, who, in December 1950, deserted. Though before his desertion his first impressions of western standards were based on nothing better than prevailing conditions in Eastern Germany, they "produced on him," we read, "an enormous psychological shock," followed by a second when, on leave to his home in the Ural—a subjugated area—he compared what he had seen in Germany with the utter poverty and misery in which his relatives lived. Further, it should not be overlooked that 42 percent of Soviet Army recruits come from the subjugated peoples, and therefore inherit their discontents.

Though the Soviet Army is immensely powerful, it is no coincidence that, whenever the Kremlin has resolutely been faced up to, it has drawn in its horns. There are two reasons for this. The first is that its inmates have realized that, under present-day conditions, military occupation decides nothing—that, in fact, physical conquest is no longer a profitable affair—a question I will return to later on. The second is that they fear actual war like the plague. Not because the U. S. S. R. can easily be subdued by external force, but because war leads to internal disruption. This is a point of vital importance.

In the Russo-Japanese War of 1904-5, it was not Japanese naval and military power which compelled Russia to accept the Peace of Portsmouth, it was the eruption of the revolutionary forces within her. Again, in World War I, it was not her defeat in the field which brought her to sign the ignominious Treaty of Brest-Litovsk; it was the astuteness of Lenin, who, cashing in on the ruthless treatment of the subjugated peoples by the Czarist regime, offered them liberation—fully intending, however, to resubjugate them once he had created a Bolshevik army. The result was that Czarist Russia disintegrated, 16 subjugated nations declaring themselves free and independent national states.

In World War II, no sooner did the German armies enter the Baltic States, Byelorussia—White Russia—and the Ukraine than they were acclaimed as liberators and vast numbers of Russian soldiers deserted to them. At the time, so encouraging was the German reception that Count Schulenburg, former German ambassador in Moscow, proposed that the invasion should be turned into a civil war in which the Russians themselves would help in overthrowing the Bolsheviks. He suggested that Germany should announce that she had no territorial claims; that she would agree to each conquered territory setting up its own local government, and that she would recognize these governments as her allies.

But Hitler's suicidal policy of "the complete extermination of the Ukrainian and the other East European peoples" prevailed. Instead of liberation, the destruction of the Ukrainian and other underground movements was ordered. The result was that for their self-preservation the subjugated peoples turned against the Germans.

This was the beginning of the collapse of the Third Reich, which was hastened by

Stalin's astuteness in adopting non-Bolshevik tactics, though, like Lenin, his intention was to discard them once the war was won. Had Hitler but offered the subjugated peoples freedom and self-determination, the high probability is that the U. S. S. R. would have collapsed before the end of 1941.

Besides not being able in wartime to rely on the loyalty of its subjugated peoples, the Kremlin is fearful of invading Western countries, because, should it do so, its soldiers will discover that the U. S. S. R., instead of being, as they have been brought up to believe, the most advanced country in the world, is one of its most backward, and that they are the victims of a gigantic lie. For this reason alone—though there are others—Stalin has been compelled to substitute what is called "cold" war for "hot." Its aims are: (1) To confuse the thought of Russia's adversaries by turning every argument upside down and reaping a propaganda value out of the confusion. (2) To rot her opponents internally by means of fifth columns, and discredit their democratic principles should they resort to repressive measures. (3) To compel them, by constant military threat, to expend such large sums on armaments that they will cripple their finances and undermine their economies. (4) To distract their military forces by drawing them into distant regions, such as Malaya, Indochina and Korea, in which only satellite troops are engaged.

For the Kremlin, cold war is the only type of aggressive warfare which fits Russian psychology. Its strategy is that of dissolution and not of destruction—the attack on the mind of the enemy in order to gain control over his body, and not on his body in order to influence his mind. It is not as with the Western powers, when they talk of psychological or political war, an auxiliary of actual war, but instead the real war—the decisive conflict.

In its outlook upon war, the Kremlin is far more up to date than its antagonists. It realizes that in modern industrial and scientific conditions, physical warfare is increasingly becoming mutually too destructive to be a profitable instrument of policy. As the last two World Wars have clearly shown, the victor comes off almost as badly as the vanquished, and this, politically, does not make sense.

We simply cannot ignore the fact that today cold war is increasingly ousting hot war as an instrument of policy and that unless we learn how to wage it in all its forms—political, ideological, economic, and military—so that in wartime we win over the allegiance of the enemy's masses instead of destroying them, the very means of destruction we employ will end in defeating us.

Now that we have inspected the contents of the Bolshevik shop, the question "What is the problem?" becomes clear. It is to frustrate the Kremlin's two-front strategy by adopting a two-front strategy of our own: (1) To be strong enough physically either to prevent the outbreak of war or, should war come, to be in a position to contain Russian military operations. And (2) under the cover of our physical forces, to be astute enough to wage a war of disintegration within the U. S. S. R. and its satellite countries, not only after the outbreak of war but from this very moment. Should its aim—successful counterrevolution within the U. S. S. R.—be attained without actual war, so much the better, but, war or no war, it will remain unattainable unless the war of disintegration is ultraoffensive.

Our existing solution of the problem—if "solution" it can be called—is ultradefensive because it is based on the conception of

containing communism, (1) by military action on fire-brigade lines wherever an aggression may take place, (2) by economic betterment in the Western countries in order to prevent communism from spreading, and (3) by building up what is called the Atlantic Alliance as the progenitor of a defensive Atlantic or European army.

Because it is a purely defensive policy, it leaves the initiative in the hands of the Kremlin. Worse still, it does not face up to realities. What is the use of a fire-brigade system as long as the fire raiser is left at large? Further, this dispersion of force emasculates the building up of an Atlantic Alliance, which is equally unrealistic, for it is based on regional planning involving over 50 committees, and includes France and Italy, countries with large Communist elements. As regards prevention of the spread of communism by economic improvement of the Western countries, it is excellent so far as it goes; yet it is frequently overlooked that economic betterment in itself can no more remove an ideology than filling an empty stomach can cure a deranged brain.

This confusion of defensive measures has fortified the policy of the knockout school—that the simplest way out of the tangle is to cut the Gordian knot. In other words, to rely on physical force alone. After all, have not we got the atomic bomb, and should the worst come to the worst, cannot we blow Russia to hell?

This, however, is a somewhat crude solution, for instead of curing the patient the world crisis—it knocks him on the head.

Though a sufficiency of force is the first half of the solution, the amount needed will depend as much on the moral state of the Russian peoples as on the strength of the Russian Army. The lower the first is, the weaker will the second be, and the weaker it is, the less will be the physical force required to vanquish it.

The second half of the solution centers in the unbearable Bolshevik rule, which has established a ready-made second front in every country behind the iron curtain. Wherever bolshevism is sown, antibolshevism can be reaped. For, though by terror a people can be compelled to obey their masters, they cannot be compelled to cease hating them.

Hatred is the uranium 235 of the second half, and without it its physical prototype remains purely a weapon of material destruction. And of all explosives, psychological fission is the one the Kremlin dreads most, because it glows the bottom out of its ideology. Therefore to turn the U. S. S. R. into a gigantic psychological bomb is the second half of the solution.

Thus far, this half has been almost entirely neglected by the western powers, yet it is by far the easier to arrive at, because the U. S. S. R., being ethnographically divided into Russians and non-Russians, is in consequence packed with psychological uranium.

In 1943 the representatives of the resistance movements then springing up among the conquered and subjugated peoples banded themselves together into an anti-Bolshevik block of nations—the A. B. N. Today it includes the following 25 countries—14 in the U. S. S. R. and 11 in Europe.

In the U. S. S. R.: Armenia, Azerbaijan, Byelorussia, Cossackia, Estonia, Georgia, Idel-Ural—between the Volga and the Urals—Latvia, Lithuania, North Caucasia, Siberia (east and west), Tataria, Turkestan and Ukraina.

In Europe: Albania, Bulgaria, Croatia, Czechoslovakia, Finland, Hungary, Poland, Rumania, Serbia, Slovakia and Slovenia.

The aim of the A. B. N. is the complete dissolution of the Soviet empire and the establishment of each part as a sovereign nation. The A. B. N. is, therefore, opposed to any form of Russian imperialism, whether czarist, Socialist, Democratic, Republican, or Communist. Nor will it tolerate any form of Russian federation, because it fears that whatever form it may take, it will inevitably lead to the reestablishment of a Russian hegemony.

Because in the Atlantic pact—however defective—is to be found the only potential first front against the Soviet Union, so in the A. B. N.—however lacking in organization it still is—is to be found the only potential second front. Together the two should constitute the grand strategical instrument of the Western powers, the one being as essential as the other, for neither without the other can achieve what should be the Western aim—not the containment of communism, but the complete elimination of Bolshevism, without which there can be no peace in the world.

From the value of the A. B. N. as a disruptive instrument, I will next turn to its ability economically and strategically to strangle the U. S. S. R. in another war.

The Ukraine, with a population stated to be 42,000,000, is the economic hub of the Soviet Union—this is why Hitler's aim was to wrench it from Russia. It supplies over 50 percent of the whole of Russian production, and there is no possibility of destroying the Bolshevik empire without severing the Ukraine from it. Still today a Ukrainian insurgent army, known as the U. P. A., is engaged in guerrilla war against the Kremlin.

The following percentages show the importance of the Ukraine and other subjugated countries to the over-all Soviet economy. Coal, 60 percent from the Ukraine and 9 percent from Turkestan; iron ore, 80 percent from the Ukraine and the Crimea, and 30 percent from Idel-Ural; manganese, 100 percent from Georgia and the Ukraine; copper, 40 percent from Turkestan and Caucasia, lead, 80 percent from Turkestan; zinc, 80 percent from Caucasia and the Ukraine; mercury, 100 percent from Turkestan and the Ukraine, and sulfur, 80 percent from the Ukraine, Caucasia, and Turkestan.

Almost the entire production of oil in the U. S. S. R. comes from non-Russian soil. Finally, as regards agricultural products, 33 percent of Russian wheat comes from the Ukraine and North Caucasia, 70 percent of the sugar is produced in the Ukraine, and 100 percent of the cotton is grown in Turkestan and Caucasia.

Therefore the conclusion is, should in wartime organized guerrilla war be fostered in the subjugated countries and adequately supplied by the western powers, the high probability is that the whole economy of the U. S. S. R. would collapse.

Historically Russia's strength has been based on two factors: the vast expanse of her territory and her vast manpower. This held good as long as weapon power remained simple and movements were governed by horse traction. But this is no longer the case, for weapon power has been industrialized and air power has reduced her expanse.

Communications in Russia have always been indifferent because expanse and movement are incompatibles. Even today there are no more than 57,487 miles of railroads in the U. S. S. R., whereas in Great Britain there are 19,863 and in the United States 227,000. Further, many of the Russian railroads are still single track, and because those linking the Pacific to the frontiers of Poland and Rumania pass through the subjugated Baltic States, Byelorussia, and the Ukraine,

they are open to sabotage in both peace and wartime.

In order to secure her industries—her arsenals—against air attack, Russia has adopted a policy of dispersion, but, seemingly, has overlooked that the remoteness of many of them from the more probable theaters of war permits present-day aircraft to cut them off from the latter by destroying the interlinking communications. Actually there would be no need to destroy the industrial centers themselves, for if the few main rail junctions in the U. S. S. R. are put out of action, the fewness of the railroads in most cases will render the deflection of traffic impossible.

Further still, the greater the dispersion, the more difficult does it become for the Russian air force to prevent the systematic destruction of either the industrial centers or the railroads leading to and from them. Relative to this, it should not be overlooked that, on account of climatic conditions as well as the great distances to be traveled, the replacement of railroad traction by motor transport will generally be out of the question. Also that, unlike the United States, the U. S. S. R. possesses no extensive system of pipelines for the distribution of oil and petrol.

The conclusions to be drawn from this strategical survey are: (1) That the technical equipment of Russia's fighting forces will be at its best at the opening of war, and should her railroads be paralyzed, it will rapidly deteriorate. And (2) because of this, it may be expected that, as in the past, Russia will rely on mass-manpower attacks in order to make good her technical deficiencies.

Clearly, then, adding to the demands on the Russian army within the U. S. S. R. will lead to its numerical reduction in the areas of operations, and this can be effected by the assistance of the subjugated peoples. For them, the expanse of the U. S. S. R., when coupled with outside air supply and assistance, facilitates revolt, which simultaneously will be difficult to suppress should rail communications be paralyzed. Also it should not be overlooked that a vast belt of labor and concentration camps, in which millions of slave workers are imprisoned, stretches across northern Siberia and Manchuria. The first of these areas is within transpolar air range of the United States, and the second at no great distance from Korea and Japan. All these camps are potential centers of revolt. Therefore the more the Kremlin can be compelled to garrison them the less numerous will be its troops in the areas of military operations.

When all these factors are considered, it will be seen that Russia's fighting manpower, great though it is, can as a whole no more be concentrated than can that of her opponents. Though the latter are an association of autonomous nations tending to diverge rather than to unite, the U. S. S. R., is a despotism of subjugated nations, forcibly united by terror, and inhibited by disruption. That, in fact, Russia is a giant with feet of clay, and that the more her fighting forces are dissipated on internal security, the more formidable do those of her opponents become.

I hope I have made it clear that, in order to overthrow the fire-raising colossus, the technical superiority of the western nations is not in itself enough. What they are lacking is not power to wage war, for though power may still be insufficient, there is no insuperable difficulty in rendering it sufficient. Instead, it is lack of faith in their way of life, and lack of courage in proclaiming it.

They must understand that the sword of liberty is but dead metal as long as it is

sheathed. It is because they fear to unsheathe it that they lack a positive policy concerning the nations forcibly and fraudulently incorporated into the Soviet Union. Yet without a positive policy they can never hope to exploit the seething discontent behind the iron curtain. Be it remembered that, without counting the subjugated peoples of the U. S. S. R., ten independent states of old Europe, inhabited by about 80,000,000 people, are now under Soviet domination. Of these millions and the millions more in the U. S. S. R., the vast majority are potential allies. Until the western nations openly proclaim them to be such, the sword of liberty will remain sheathed.

If the west is to gain the sympathies of the enslaved peoples, it must inspire them. To think in terms of the atomic bomb is autocratic; to think in terms of liberation is democratic, and though the atomic bomb has its uses, they must be weighed against the psychological effects they are likely to produce. To use this weapon indiscriminately is to repeat Hitler's blunder. The way in which it is used will determine whether the millions of enslaved peoples in Europe and the U. S. S. R. are to be the allies of the West or the unwilling defenders of Moscow. What they seek is liberation and not obliteration—let the western nations remember this.

Lastly, I will end with a concrete proposal. Because from past history there is no reason to suppose that a change of regime in Moscow will call a halt to the age-old urge of Russian expansion, the aim of the Western Powers should coincide with the aim of the A.B.N. This means that the Soviet Empire must be dealt with as was the Turkish—that is, split up into its component parts, each part becoming an independent country.

The first step toward achieving this end is the formation of all freedom-loving peoples on both sides of the iron curtain into a common anti-Bolshevik front. The second is the creation of a psychological-warfare general staff which will give teeth to this union. It should comprise three main branches—operations, intelligence, and supply.

The duties of the first should be to plan and organize partisan activities within all subjugated countries, and train refugees and form them into the nuclei of national armies, around which the enslaved peoples can build up their fighting forces on or after the outbreak of war.

The duties of the second should be to collect and coordinate information gathered by the underground movements; train intelligence agents for work not only behind the iron curtain but also in all countries which in wartime may be overrun by the Russians, so that guerrilla war may be organized in their rear, and by intensive propaganda keep the spirit of counterrevolution alive.

The duties of the supply branch should be to make ready on a vast scale all the requirements of guerrilla warfare; the provision of arms, ammunition, explosives, medical stores, rations, radios, and so on, as well as earmark the aircraft needed to carry them and also personnel to prearranged dropping points, so that, when the flag falls, the psychological bomb may be detonated from the Arctic shores to the Mediterranean and from the Pacific to the Elbe.

If these things are done, the western nations need have no fears. But, if they are not done, though the west may win the next war, in its winning it will reap its own destruction and may well end in Bolshevizing the world.

The Seriousness of Maliciously Vilifying and Abusing Governmental Officials Should Be Publicly Rebuked—Malfeasance on the Part of Public Officials When Proven Is a Monstrous Thing—A Free-Thinking People, However, Have Not Failed to Note That Misbranding of Accusers Must Also Be Reproved

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, October 19, 1951

Mr. BOYKIN. Mr. Speaker, the tax system of these United States is a voluntary system. While it might seem to some that taxes are paid under duress, nevertheless the fact is that all taxes paid under our system of government, whether Federal, State, or local, are as voluntary as are the contributions made to the American Red Cross or our local Community Chest. If ever the American people should lose faith in their public officials, that system of voluntarily supporting their government will fail.

Mr. Speaker, it is, therefore, necessary that when irregularities occur with respect to the payment or the collection of taxes, either on the part of any person or group of persons, diligent investigatory studies should be made to see whether that individual or that group has paid a proportionate share of the cost of running the Government, as laid down in the law by the representatives elected by the people to determine what the cost of Government at a specific level should be.

If there are those who disagree with what the cost of Government should be, it is not their privilege to withhold any part of the tax legally levied against them. However, it is their privilege to change the representatives whom they elected to make ascertainment and determination as to what amount of taxes should be paid by each individual or corporation.

So that, again I say, whenever wrongdoing becomes apparent, investigation should be made to determine just who is at fault.

Mr. Speaker, during the last several months, the case of the Government against certain internal revenue collectors alleged to have been guilty of malfeasance has recently given rise to another crime investigation by a committee of this House.

With respect to who should conduct the investigations now taking place, that is another matter. Of a certainty, the Congress should make investigation whenever it feels that wrong is being done, but it should make all ascertainment with a view to reaching conclusion as to how to legislate in order to prevent alleged irregularities and crime.

This, unfortunately, is not always the case. Too often investigations are started altogether on a personal or a partisan basis, and very often solely and purely for political purposes, or by those who seek personal preferment and aggrandizement—to gain public attention and further their own selfish ends.

I well remember years ago a life insurance investigation conducted by a young attorney, Charles Evans Hughes, which resulted in making him Governor of New York. Because of such a start, Mr. Hughes later distinguished himself as one of the most prominent men in the United States.

Governor Tom Dewey, another special district attorney, rode to the governorship as a result of a good press agent attached to an investigation which Mr. Dewey conducted principally on political connection with the petty numbers racket. As a result of this he attained national prominence and was several times nominated for President of the United States.

More recently, we have heard great criticism about the ethics of one of our colleagues making what were alleged to have been huge profits on a book which he published with respect to his investigation. In the meantime, the committee counsel of that investigation turned from the practice of law and became a television star. He is now on a fair way to becoming the president of the Council of New York City, with a job paying him \$25,000 a year.

Insofar as congressional investigations are concerned, to drag any citizen before a television audience, across the headlines of the daily press, or in any other manner expose him to shame, or make a public exhibition of him, for personal or political gain, whether he be a private citizen or a public official, is something that we in this body should really legislate against.

With the multiplicity of investigations that marks the current fashion of various committees in both Senate and House, it does seem that the Federal Government is not now so much a government of the administration of the law by executive departments—as it has become a government of investigation by the Congress.

As one of our colleagues in the cloak room said not long ago, if we are going to keep on increasing congressional investigations now seemingly convening all over the United States, as well as abroad, we might as well turn the Capitol and our legislative duties over to the Federal Bureau of Investigation, let the FBI take over our duties and offices, while we in the House and Senate move down to Ninth and Pennsylvania Avenue, and take over the duties of the FBI.

Mr. Speaker, nearly all the efforts that have been put forth to date have been instigated merely to cast aspersion upon the names and reputations of various and sundry public officials concerned mainly with the executive department of Government. The men who have fallen prey to the name calling and the

vituperation constitute a veritable catalog of the highest officials, and more or less include every Government worker in the United States.

It just so turns out that the effort to smear up and to stink up everybody connected with the administration has not been as astutely carried out as it might have been, and the results to date have certainly been singularly unconvincing.

This approach to a political campaign has many disturbing implications, for it has already been demonstrated that there is little public interest and no other than strong political interest in what the headlines were screaming just a few months ago.

Oh, yes, there were a few indictments for perjury of the so-called 5-percenters, but when the issue was all threshed out, the Congress did little or nothing about it, because there was nothing that they should do.

When real consideration was given to the matter, it was found that the small American businessman is entitled to sell his goods to the Federal Government, that he cannot afford to keep a highly paid representative in Washington to do the job. And to what end? It was found that he pays some local salesman a commission for selling Fuller brushes and other goods, whether he sells them to a housewife on her back porch, or to some Government purchasing official in a plush office who buys millions of dollars worth of goods.

Of course, there would be prosecutions, yes, and convictions, if there was graft involved, or overpayments, or any other illegalities; but when the congressional investigators were all done with the 5 percenters, the only thing that happened was that someone named John Maragon was found guilty and went to prison for perjury.

There was a tremendous lot of bombast about irregularities of the Reconstruction Finance Corporation. No one on the investigators' staff ever took the time to tell you that no business concern ever got an RFC loan unless there was a sworn affidavit made by the borrower that the local bank or banks could not legally make this loan in order to keep the business in operation. Therefore, as provided by law, these borrowers made application to the RFC.

Neither did they who concerned themselves mainly with discrediting the Reconstruction Finance Corporation and its officials take time to tell the public that during a single year, from every State in the Union, as well as from Alaska, Hawaii, Puerto Rico, and the Virgin Islands, there came to the RFC 11,127 applications for business loans, that 4,559, totaling \$595,647,000 were approved, and that, pending as of December 30, 1950, there were 1,686 further loans, aggregating \$433,866,000.

To state it simply, last year about 5,000 business firms, large and small, together with thousands of employees, were saved from bankruptcy by the Reconstruction Finance Corporation, and without the cost of a single penny to the Govern-

ment of the United States. Moreover, the RFC has never cost the Government one cent; rather, since its inception, it has earned more than \$600,000,000 over and above all operating costs on the interest paid by borrowers on the loans which they obtained. That \$600,000,000 profit is a profit for the taxpayers of these United States.

Mr. Speaker, despite all that we heard about pastel mink coats and so-called commissions, I do not know of a single grand jury in the United States that indicted anybody for anything connected with the RFC matter, and for the simple reason that nobody ever received a single penny in commission from the RFC. Whatever was paid was paid by the borrowers, and that was their private business.

If a small businessman, or, for that matter, a big business house, needs financial assistance and furnished by the RFC, the RFC gets all their money back with interest. If the borrower paid anybody any commission, big or little, it was paid out of his own pocket, it was nobody's business to whom he paid it, unless that man was an official of the United States Government.

The RFC loaned the borrower the money. They charged them the legal rate of interest, and they got the money back from the borrowers. At no time in all of the investigations was there any intimation of any RFC official taking any graft. In one instance, somebody in St. Louis admitted that someone else had sent him an 8- or 10-pound Smithfield ham as a Christmas present, and that little incident made as much publicity as I got when one of my tenants, who makes his living running an apiary, killed a bear that had been eating his honey, and sent me the carcass of the bear. What the papers did not tell was that I sent that bear carcass to a local hospital where it was sold for the benefit of the patients.

We also heard a lot of bombast in the press about a White House stenographer—this one was called a secretary—who made the headlines for receiving a pastel or some other kind of a mink coat from some friend of her husband.

Then there was all that talk about perverts and Communists. That all seemed to revolve around oddments of political propaganda, fueled and refueled in order to keep the Nation stirred up.

The utter collapse of all of these politically inspired charges, pursued with such high-powered methods, have, in the past 18 months, on too many occasions, proven reckless and irresponsible.

The fact that they have gone with the summer sun exhibits the utter collapse of any sound or relevant charges against the statesmanship, competency, and foresight of the Truman administration.

The seriousness of maliciously vilifying and abusing governmental officials should be publicly rebuked. Malfeasance on the part of public officials when proven is a monstrous thing. A free-thinking people, however, have not

failed to note that misbranding of accusers must also be reprov'd.

The remarkable thing about a government such as ours is that we have so few rather than so many malefactors. This is especially true in view of the fact that we have so far extended the activities and services which we afford to our people.

Mr. Speaker, as a Representative of a southern constituency to the Congress of the United States, I and my people have had serious differences with respect to certain States' rights and other issues enunciated by President Harry Truman. But neither I nor any one of my constituents has for one single moment ever impeached the integrity of our President, for I and everyone in the First District of Alabama hold him to be a true American citizen of probity, honor, and character. While I have cast my vote against measures which he has recommended to the Congress, likewise, I have voted with him on all matters upon which my constituents and I, as their Representative, thought that he was right.

Mr. Speaker, God knows that our President has had a tough, difficult, administration; many of the vexatious problems being such as would have tried the soul of any man. I do not know how many Cabinet members, "little cabinet" members, internal-revenue collectors, Federal district attorneys, judges, port collectors, Army, Navy, Air Force, and Marine officers, and postmasters that the President has appointed to office. I know that the numbers must run upwards of a million or more, and when I think of the very few bad eggs that have been exposed among them, I am reminded of the fact that a few such dishonorable men are bound to creep into any body politic. I often think of the Great Master himself, and of how one of his little band of 12 became a cheat, a fraud, yes, even a traitor. Then I take heart in the small per centum of those who became a Judas Iscariot to Harry Truman. The percentage is still greatly in favor of the President, for it is but a small fraction of 1 percent compared with the percentage that turned on the Master himself.

There are real issues existing in America which all men could and should face. The situation that exists today cannot be blamed on political parties, nor can any one political party solve these problems by the application of some pat formula.

The real leaders in America sense that there is a condition existent that cannot exactly be resolved or coped with in terms of pure political philosophy or party platforms. Hence, the conservative leaders of both parties have little to say.

The demagogues, on the other hand, kick off with the premise that everyone in the opposition party is a crook. They imply that both hands of every man in public office is itchy with graft and corruption.

One fact that is crystal clear is there will be a national tragedy for both po-

litical parties and the people of these United States of ours if, in the abortive attempts to destroy the reputation and the character of our public officials and the Congress, this Nation should lose its freedom by the destruction of faith of the American people in the Government itself.

Let all hold the mirror up to truth and they will discern that they are themselves without a palliative program which can be put into operation at home or abroad—one that will today solve the problems that confront the world.

The enemies of this administration are simply making a play to take over the affairs of Government simply by asking the people to put the Democrats out and let them in. It is indisputable that the voters of the United States can be counted on to answer that sort of a plea at the polls in the next election.

Mr. Speaker, in the closing days of the Congress, we were given to understand that, due to some alleged irregularities of conduct on the part of certain district revenue collectors in New York, St. Louis, San Francisco, and elsewhere, that one of our House committees was going into that situation with a view to reporting to us on the same.

The name of the good, beloved, respected, and trusted friend of you, sir, and of a majority of the Members of this House, the Honorable Theron Lamar Caudle, Assistant Attorney General of the United States, was in some manner injected into that discussion. Taking exception to what my colleague had stated, I pointed out that in his present capacity as Assistant Attorney General, Lamar Caudle has nothing whatever to do with United States internal revenue cases, and that he will have nothing to do with them unless it is shown by investigation that there has been a violation of the internal revenue law by failing to file or by way of the falsification of the returns in case they did file.

Mr. Speaker, you and I know Lamar Caudle, and we have been knowing him good, and for a long, long time. I am sure that you all will agree with me, sir, that when it comes down to official acts with respect to the high duties which he discharges, that friendship stops on the threshold of his office, for I have never in all my life known a man who could and does lay truth down so quickly on the line more than does Theron Lamar Caudle.

I hold it to be unspeakable conduct on the part of anybody in these United States to assassinate the character of any man, woman, or child, for, to paraphrase the Bard of Avon:

Good name in man or woman * * * is the very life of the soul * * * for he who steals my purse, steals trash—'twas mine—but now 'tis his, and it will be slave to thousands. But he who robs me of my good name, robs me of that which enriches him not—but makes me poor indeed.

And so, I repeat that it is unthinkable that men should drag the name of a Caudle through the mud and besmirch a

man whose family and kinfolk are a tradition in the great State of North Carolina.

Mr. Speaker, it seems to me that the name of Caudle and the name of Boykin have been names that have come down through the pages of history long before the Government of this Nation was established.

Both the Caudles and the Boykins entered this country by way of the Colony of Virginia, and the name of Stephen Caudle is written into the poll list of Brunswick County, Va., away back in 1748, more than a quarter of a century before they rang the Liberty Bell in Independence Hall in Philadelphia. That reference is verified in volume 26, page 26, William and Mary College.

The name of Edward Boykin, who came over from Wales, settled in the Isle of Wight County in Virginia in 1685. Mr. Speaker, that is 265 years ago, or nearly 100 years before the establishment of this Nation.

I want to tell you, Mr. Speaker, that the Boykins and the Caudles have been kin to one the other all of their lives, and that the Caudles were always good people, that no Caudle was ever capable or would stoop to do harm to or commit a crime against any man or any principle, or against any institution of our Government.

Mr. Speaker, there is no man in America more beloved, more respected by those who know him than is Theron Lamar Caudle, Assistant Attorney General of these United States.

Lamar Caudle comes from an old line of famous North Carolina jurists and lawyers, and possesses a background of experience which eminently qualifies him for his new position as assistant attorney general in charge of the criminal division in the Department of Justice.

Mr. Caudle's grandfather and father, T. L. Caudle, Sr., were learned and distinguished in the law. His father, at the time of his death, was president of the North Carolina Bar Association. His mother, Susie Gooch Caudle, now deceased, was a direct descendant of Sir William Gooch the first Governor of Virginia.

Theron Lamar Caudle was born on June 22, 1904, and reared in Wadesboro, N. C. He attended high school in Wadesboro, and was president of his class each of the 4 years. He obtained his LL. B. degree at Wake Forest College under the noted Dean N. Y. Gulley, who had also taught his father. He is a member of the Phi Kappa Alpha and the Golden Bough. He is a member of the executive committee of the North Carolina Bar Association.

Mr. Speaker, I need tell few men in this House of the lovely lady he married, Miss Fairfid Monsalvatge, or of their four children, Lamar, Rose, Tommy, and Fairfid, Jr.

Lamar Caudle was named in honor of a close kinsman, the distinguished L. Q. C. Lamar, lawyer, educator, Senator, member of the Cabinet of President Cleveland, and Justice of the Supreme Court of the United States.

Mr. Caudle has long been regarded as one of the most vigorous United States district attorneys in the country. He has served as United States attorney since 1940, when he received his appointment through the recommendation of the then Attorney General, Robert H. Jackson. Prior to his Federal appointment, Lamar Caudle had enjoyed a State-wide, general legal practice, and had served for 8 years—1932 to 1940—as solicitor of Anson County, N. C. He began the practice of law with his father, working with him from 1926 to 1929, and then joined the firm of Robinson, Caudle & Pruitt.

From the very hour he assumed the post of prosecutor of Federal law violations in western North Carolina, he has maintained a notable reputation among the legal profession, the public, and the press for his vigorous and fair conduct of trials.

Due to the heavy burden of cases in the large territory covered in that judicial district, it was divided into two sections with one office in Charlotte and another in Asheville. Mr. Caudle was in charge of both offices, and he has tried hundreds of criminal cases, along with attending to an enormous volume of civil matters engaging the court's attention.

His excellent record as an effective and considerate prosecutor came to the favorable attention of the Department of Justice in Washington, and a well-deserved promotion resulted.

He has since served as Assistant Attorney General in charge of the Criminal Division of the Department of Justice, a position left vacant by the promotion, and upon the recommendation of the Honorable Tom C. Clark to Attorney General.

As head of the Criminal Division, Mr. Caudle had direct charge of the prosecutions of all Federal offenses. Among them were espionage, sabotage, violations of the Selective Service Act, war frauds, bank robbery, kidnapping, offenses affecting interstate commerce, election frauds, Hatch Act violations, and violations of the narcotic laws. And no man ever served in that high office has ever established a better record of public service than did he.

Any man of his profession should be proud Lamar Caudle's achievement in having prosecuted many thousands of cases before the bar of justice, and, certainly, in so doing he has made some deadly enemies.

Mr. Speaker, Lamar Caudle is not just proud of his record as a prosecutor; he is not the type that wants merely to win a case. His is the rightful desire to see that justice is done; and, as for his enemies, the Nation is proud with him for the enemies that he made.

It is altogether unfortunate that in 1945 Lamar Caudle, and as Assistant Attorney General in the discharge of his official duties, defended the action of denying the Department file to congressional review. It was in the discharge of his duty that he pointed out that the absolute secrecy required to keep avenues of investigation open on suspected persons could not properly be kept open

if the files were released. Then, too, there was the matter of affording protection to unfortunates who are named in the reports, as well as the FBI investigators who themselves would also be destroyed, were we not to follow that course of action, Mr. Caudle pointed out.

And so 7 years later again comes demand that these files be opened. I recall Mr. Caudle's having made a statement years ago that the major problem of the Department of Justice is not in gathering information, but in making legal convictions under the law. Very distinctly do I remember his telling me that, in his studied opinion, congressional investigational committees have done a real service to the Nation inasmuch as perjury, contempt charges, arising from testimony taken before a congressional hearings and FBI agents, have enabled the conviction of many Communists and other subversive groups who would not otherwise have been liable to legal action.

Mr. Speaker, in speaking of communism—or, should I say, in talking of Americanism—I know of no man in America that has given more of his time—in the evenings, Sundays, and holidays—to expounding the principles of our American institutions and exposing the danger of communism to the American way of life than does Lamar Caudle.

He and his good wife have been lavish in the expenditure of their time and their own money, traveling hither and yon, both lecturing on the subject of communism versus Americanism in all parts of the Nation.

I, too, well remember, for it seems almost yesterday, when Lamar Caudle took his first real vacation in more than 10 long, laborious years in the Federal service. Having personally spearheaded the drive to induce Italian citizens in this country to write letters to their home-folks in Italy pointing out the dangers of communism and the beauties of our own American way of life, it was only natural that he should tell me of his great joy in having at the one time his first prolonged holiday and his first European trip. He told me he was going to spend his vacation in Italy studying, as he said, the threat of the dangers of communism being openly asserted in that democratic country to overcome the forces of democracy.

Upon his return he was more than enthusiastic about his journey. He was enthused by the fact that some committee of Italians had asked him to take the place on some important committee of one of the greatest Italian-Americans that ever lived, Mr. Luigi Giannini, the founder of the Bank of Italy in California, and now the Bank of America, the second largest financial institution in the United States.

I shall never forget the refreshing love of America reflected upon Lamar Caudle's countenance as he told me of a school of communism which he had visited where he actually saw in free Italy an institution linked strongly and openly to the Kremlin in Moscow operating in a schoolhouse not far from Rome.

I remember, also, his telling me of the splendid conference he had with the Minister of Defense of Italy whose name I do not recall. More particularly do I recall his telling me of his audience with Pope Pius XII, and of how surprised he was to note the intimate knowledge of His Holiness with respect to the vexatious questions in our country, and also with respect to the various officials in the United States.

He told of Pope Pius XII's appreciation of the fight President Truman and Americans are making on all fronts to preserve the peace of the world, and of the great things that are being accomplished in this country by persons of all faiths in fighting the ungodliness taught by communism almost within the shadows of the Vatican itself.

"FRANK," he said, "you know it is a strange thing that the Catholic Church, when it chooses to select a Pope, always selects a man of matured age and judgment—might I even say, an old man—and I was indeed surprised to hear this aged prelate discuss so intimately so many things about our own country and our public officials, and especially about my own boss, Howard McGrath."

Mr. Speaker, I want to establish the fact that there is no man in these United States who, to my knowledge, has ever done a finer or a better job in what he was charged to do than has Lamar Caudle.

When Mr. Franklin D. Roosevelt nominated Lamar Caudle as United States district attorney for the western district of North Carolina, that district had the lowest rating in the office of the Attorney General in Washington of any district in the United States. When he left it to come to Washington at the request of President Truman in 1945, that district vied with two others for the highest rating of any district in the country. It was purely because of his splendid work that Attorney General Tom Clark recommended to President Truman that Lamar Caudle be named the Assistant Attorney General of the United States, and it was purely because of the record which he established in the Criminal Division that caused his advancement and retention by the present Attorney General.

Mr. Speaker, in concluding my remarks, may I say—and in order to keep the record straight—that as Assistant Attorney General and head of the Tax Division, Lamar Caudle has no more to do with investigating the derelictions of the collectors of internal revenue than do you, sir.

The Tax Division of the Department of Justice, as headed by Lamar Caudle, has no knowledge whatever of any specific tax cases under investigation. The Tax Division of the Department of Justice has nothing whatever to do with any matter in the Bureau of Internal Revenue until it has been referred by the Bureau of Internal Revenue to the Tax Division, of Justice, for prosecution.

Moreover, in his present capacity and in the office in which he has served for the last 2 years, he has no jurisdiction

over internal revenue tax cases or collections, except civil litigation, until and unless some individual or corporation breaches the law, either in failure to file, makes false return, or otherwise violates the statutes.

In that case I need not tell any Member here in this body that swift legal and just prosecution will follow, for before the bar of justice Lamar Caudle has neither friend or foe. His duty there is to his God and country.

The malefactors of the country know that when brought to a United States Tax Court that Theron Lamar Caudle, Assistant Attorney General of the United States, is the bulldog, determined prosecutor, who has never been known to swerve from the strict line of impartial prosecution.

An Open Letter to the Republican National Committee

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WOOD of Idaho. Mr. Speaker, I am appending copy of letter delivered to members of the Republican National Committee at their meeting in St. Louis on December 7, 1942. It sounds like the voice of prophesy and is just as applicable today as it was 9 years ago. Because the Republican National Committee failed to heed the advice and warning in this letter, the Republican Party has lost three national presidential elections, and is in a fair way to lose another in 1952, if its leaders fail to wake up.

PARTY MUST STAND FOR SOMETHING

To merit the confidence of the American people, the Republican Party must stand for something. It must stop trying to "work both sides of the street." It must stop pussy-footing, fence-straddling, and "me-too'ing."

It must stand four-square for the Constitution, the Bill of Rights and States' rights; and for a Government of law rather than a Government by puny, irresponsible men who would twist and construe the Constitution to conform to their alien ideologies.

REPUDIATE PSEUDO REPUBLICANS

It must repudiate the attempted leadership of left-wingers, one-worlders and New Dealers who, masquerading as Republicans, have been elected to public office as Republicans and are destroying the party from within. Internationalism is the antithesis of loyal Americanism.

The Republican Party must pledge itself to get us out and keep us out of entangling foreign alliances; and to bring an end to international boondoggling at the expense of the American taxpayers.

SOUND MONEY AND A PROTECTIVE TARIFF

It must declare for a sound redeemable currency; and for a tariff adequate to protect labor, industry, agriculture, and mining. Currency that is not redeemable is fiat-money, destined to become worthless. Free trade is possible only between nations and peoples that enjoy the same standard of living. Free trade will not bring the other 94 percent of the world's population up to our standard of living, but will drag us down to theirs.

MONEY IS MEASURE OF VALUE

Money is the measure of the value of all goods and services. Unless that measure is honest, constant, and invariable, millions of people will be cheated in the sale of their goods and services, while others will profit unjustly. Of such injustices are wars and depressions made.

THE ROAD TO PEACE AND SECURITY

The establishment of a sound, honest, dependable monetary system which will maintain and protect the solvency and integrity of the people's money and guarantee the redemption of currency at face value, on demand, will do more to prevent war, establish justice, insure economic stability, and promote peace and harmony among nations than all the United Nations, Marshall Plans, Atlantic Pacts, or point 4 programs ever devised.

Those who oppose or would delay the adoption of a sound monetary system are playing right into the hands of the Communists and international racketeers who are selling America down the river.

And a final word of warning to the leaders of the Republican Party: McCarthyism has come to mean opposition to subversives in government, and you can't laugh that off or shrug it off.

The prophetic letter referred to above, written by Paul O. Peters, editor of the Washington News Bulletin, follows:

To the Members of the Republican National Committee:

GENTLEMEN: You are assembling in St. Louis, on December 7, to choose a new chairman. The selection of a chairman is but a preliminary step that will be interpreted by the press and the public as indicative of the Republican Party's stand upon the paramount issue confronting not only the Republican Party but the Nation as a whole.

This issue is a grave one—do not be confused.

Plainly speaking, the issue is a choice on the one hand, between our own republican form of government based upon economic nationalism, States' rights, self-sufficiency, with the guaranty of the maximum enjoyment of individual liberty and freedom of initiative, or on the other hand, some polyglot form of government, semi-communistic in style, with economic internationalism as its goal and the initiative and liberties of the people curbed by some form of bureaucratic dictatorship.

The issue is not a complicated one, but is made so to appear by the skillful maneuvering of those who would betray this Nation and deliver its people up to some world supergovernment.

However complicated the fundamentals seem now, rest assured, gentlemen, the real issue will be brought into the open, and quickly.

The American people will not knowingly allow the Republic to be submerged by an overwhelming debt burden piled on by an ever-expanding bureaucracy. Neither will they knowingly allow alien-ism ideals to further displace the high and native ideals of the founding fathers.

Government of the people, by the people, and for the people will not perish in the United States without a desperate struggle on the part of those who believe in government by laws and equal justice under law.

We mention no names and make no suggestions as to whom shall lead tomorrow.

Yours is a great trust and a great obligation.

You may be deceived yourself, but no man or group of men can long conceal from the people any course that is not first, last, and all the time purely American.

The Republican Party, therefore, cannot clasp to its bosom, and claim as kin, those who stand with one foot in the camp of the economic internationalists and the other foot resting on the remnants of the Constitution.

Neither can the label Republican be applied to those who reach out the hand of comradeship to the dictators of Europe, Asia, and South America, while deftly reaching into the pockets of the American taxpayers with the other.

More than 2 years ago, the party was asked to veer to the right, to say farewell to the Knoxes, the Stimsons, the Willkies.

That appeal fell on deaf ears.

On November 3, the people spoke in no uncertain terms.

The victory at the polls was not a Republican Party victory—do not be misled by the results.

It was a protest against things the American people do not want and will not have.

At the same time it was a vote of confidence in constitutional government, and the American way of life.

PAUL O. PETERS

NOVEMBER 29, 1942

Further Inquiries To Be Made of Alien Property Office

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a statement prepared by me regarding the Office of Alien Property.

There being no objection, the statement was ordered to be printed in the Record, as follows:

WILEY ANNOUNCES FURTHER INQUIRIES TO BE MADE OF ALIEN PROPERTY OFFICE—"Is It A SUPERGRAVY TRAIN?"

(By HON. ALEXANDER WILEY, of Wisconsin)

Mr. President, there are few agencies in the Federal Government today which are less well known but which are more powerful than the Office of Alien Property, a division of the United States Department of Justice. This Office carries out the authority and powers of the Federal Government concerning

blocked and vested alien property, as delegated to the Attorney General by Executive Order No. 9788, of October 14, 1946, and Executive Order No. 9899, of August 20, 1948. These orders were in turn issued under the authority of the trading-with-the-enemy law, as amended.

THE SPECIFIC ISSUE AND THE LARGER ISSUE

In recent months I have pointed to what I regarded as certain questionable aspects of the Office of Alien Property.

This whole subject was precipitated by an amendment to House Joint Resolution 289, which I had introduced in order to provide a day in court for certain individuals—American citizens—who I believe had been treated unfairly by the Federal Government. Because of the strange, obstinate resistance of the Office of Alien Property, which refused to allow such a day in court (an elementary right which I for one regard as basic to American liberty), the issue of this single case—General Dyestuff Corp.—Ernest Halbach—has come to symbolize a still vaster issue—the whole question of how the Office of Alien Property has as a whole been administered. Thus, irrespective of the ultimate outcome of the particular issue which helped to precipitate this whole discussion, I for one feel that the time is long overdue for a thorough look-see into the operations of that Office.

Yes, had the particular General Dyestuff (GDC) issue already been favorably resolved in a manner that the sponsors of the amendment proposed, that would not have basically diminished the over-all issue.

THREE HUNDRED AND FIFTY MILLION DOLLARS AT STAKE

In recent months there has been a tremendous and well-justified hue and cry over maladministration in certain other governmental agencies. In some of these agencies comparatively small sums of money have been involved, and yet there have been abuses of public trust. Yet in the Office of Alien Property there is being dealt with assets valued at over \$341,000,000 as of the date of vesting. I repeat that figure—\$341,000,000. This includes \$169,000,000 in stocks, bonds, and similar interests, \$11,000,000 in patents, copyrights, and trade-marks, \$7,000,000 in real property; \$61,000,000 in personal property; \$82,000,000 in estates and trusts. Broken down statistically the assets include over 42,000 patents and 500,000 copyrights alone.

Ponder the possibilities for abuse of power implicit in those figures.

The special GDC-Halbach issue which came up involved rather sizable assets in itself.

MISINTERPRETATIONS OF GDC ISSUE

Unfortunately, there was a good deal of misinterpretation of this GDC-Halbach issue. A number of folks, particularly in the newspaper profession, folks who are well-intentioned; folks who I believe have no ax to grind, but are simply interested in serving the public welfare, (which is, of course, my only concern) swallowed the Alien Property Office's line and came to feel that the amendment to House Joint Resolution 289 was unjustified. I respect the rights of these newspaper folks—or the right of anyone—to differ with me.

I have already publicly described the facts regarding my own interest in the amendment, how it had come about; how the Foreign Relations Committee defeated my amendment, and then with Democratic and Republican sponsorship, how, introduced a revised amendment, etc.

I think that the newspapermen to whom I presented these facts were rightly satisfied that my own interest in the matter was 100 percent based on what I felt to be the rights of American citizens. I am no defender of cartels, particularly cartels which have

been instrumental in opposing the national policy and defense of our country. However, I do not believe that any American citizen, regardless of his personal background or alleged background, should be deprived of his rights.

In any event, I shall continue to press for legislative authorization for the day in court which was the whole substance of the original and revised amendment.

But my main concern must necessarily remain with the infinitely larger public issues which have now emerged to the fore. Has the Alien Property Office been administered soundly? Has that administration been faithful to the public trust?

"FINANCIAL EMPIRE BUILDING" BY INSIDERS

I respectfully submit that even the relatively few facts known thus far in answer to these questions, shed a deep cloud over parts of that office. These facts point to certain juicy and apparently unjustified appointments to directorships, to other offices, to legal counsel functions. These facts relate to the peculiar nature of certain sales—past and prospective—of alien property. They relate to what some observers have characterized as hidden plans of ambitious individuals who have been and/or are now in the Office of Alien Property—plans to build up private financial empires by inside sales of resources which are now owned in the name of the American people.

When I discussed the GDC-Halbach case, I bore in mind those facts along this line which had already come to my attention.

In the back of my mind, too, was the recollection that an Alien Property Custodian had been sent to prison after World War I because of violation of the confidence of the American people.

MANY ANONYMOUS LETTERS HAVE ARRIVED

Following my initial comments in the press on this issue, I started to receive a great deal of confirmatory data as to suspicious activities within that agency. I received letters, postal cards, visits, and phone calls, many of them from leading attorneys—of both political parties—in Washington and elsewhere. Some of the messages came anonymously, unfortunately.

I am not one who believes in placing undue credence in anonymous messages. I think that where an individual has something substantial to say, he ought to have the courage to put his name and address on it. Nevertheless, it is merely stating a simple fact when I point out that a great many leads on a great many important investigations have come from anonymous "tips."

I have sorted out from those anonymous "tips" which I have received what I regarded as worthless messages from cranks, from individuals with no substantive knowledge, but with merely perhaps some personal spite in mind. There remained a residue of messages—many from folks inside the Alien Property Office. These messages added up to what I feel to be a directive. The directive or mandate is this:

"Get the facts on the Alien Property Custodian Office for the American people. Find out what has been going on there."

For example, some of the messages have run along these lines:

"Senator WILEY, look into this particular financial arrangement as regards corporation X. You will find peculiar inside dealings. You will find names associated with that corporation (particularly its legal affairs) which will be very interesting to the American people."

Remember, the annual report of that agency for the 1950 fiscal year is more significant for what it does not tell than for what it does tell. Inside information from that agency reports that new word is being

passed down "to dispose of vested property and to get rid of it fast." Apparently the powers that be are worried about the approaching storm.

Well, no honest man has anything to worry about at any time from any quarter. Fair, legal, upright, honest sales of resources can stand any scrutiny. But individuals who have functioned in stealth, individuals who have been engaged in building financial empires for themselves and for others out of the resources of the American people—those individuals do have a lot to worry about. They are now busy covering their tracks or at least trying to do so.

NO BLANKET CRITICISM IS INTENDED

Now, I want to point out very carefully, as I have on every occasion that I have mentioned this subject, that my remarks should not and must not be construed as a blanket indictment of that whole agency or of all its employees, present or past. A great many fine Americans have served in that agency, and they have served well, carefully, conscientiously.

I have pointed out that almost any individual in a policy job in that agency would require the wisdom of Solomon in order to come to decisions which would be fair and which would not involve favoritism and special preference. However, there is another kind of individual who has been engaged in that agency, and where the shoe fits I trust that this sort of individual will put it on. He is the sort of individual who feels that his office gives him an unlimited right to build up "nest eggs" for himself and for his friends.

He knows that a great many personnel appointments must be made by that agency. A great many arrangements must be made which involve financial compensation to law firms and others. This procedure is perfectly necessary and proper. Individuals must be paid for their labor.

But based on the facts which I have learned thus far, the nature of the appointments and the compensation therefor will not stand the full light of day.

Yes, the time is overdue for a scrutiny of this agency. In my judgment there have been insufficient checks and balances over its operations, and if there is one thing that we have learned in 20 years of power of the present administration, it is that no single source of power can be trusted with such power, unchecked and unbalanced by a vigilant, alert, legislative and judicial branch, a vigilant and alert fourth estate, a vigilant and alert American people.

"GRAVY POURING DOWN CERTAIN VESTS"

From what I have learned to date of the Office of Alien Property, it has been regarded by some as a "supergravy train" in which a few selected individuals working simultaneously on the inside and on the outside could grow fat and help others grow fat on the people's assets. This has not always been the case, it is not the universal case now, but in a considerable number of instances which have already come to my attention, the gravy has been practically pouring down certain vests.

Perhaps these operations do not violate the letter of the law; that remains to be seen. But the spirit of the law, the spirit of fairness, of impartiality, of economy, the spirit of justice, have apparently been violated.

The people's resources must not be considered as gravy. The people's resources are sacred.

SOME WILL CRY, "PARTISAN POLITICS"

When I even raise this issue, Mr. President, I can anticipate the smear, "partisan politics." But no, my aim is not partisan; it is not personal; it is not vindictive; it is

factual; it is objective; it is based on the welfare of 155,000,000 Americans.

I WILL SEND FURTHER INQUIRIES TO MR. BAYNTON

Now, Mr. President, I have prepared a letter to the Honorable Harold Baynton, Administrator of the Alien Property Office. In that letter, I have asked certain simple questions. I have stated that I expected the answers back within 2 weeks, since none of the questions is so complicated as to require more time than that. I trust that the answers will be forthcoming promptly because, anticipating their receipt, I have prepared and will submit to Mr. Baynton additional questions which I feel the American people are entitled to have answered.

I repeat: my aim in submitting these inquiries is not to embarrass, not to hamstring, not to annoy. I value the American people's time too much either to waste my time or an agency's time. I am merely seeking objective facts. If the facts as brought out do not justify the messages which have come to me, and which I have briefly described, then they will speak for themselves in vindication of official policies. If, however, they do justify the reports which I have received, then I will continue to press this matter in the interest of protection of the American people.

If the answers are not soon forthcoming, or if the answers are not responsive and complete, I will go to the Senate and ask if it will permit an agency to be a law unto itself and to defy a simple, objective, urgent request for data as presented by a duly elected member of the Legislative branch, a ranking member of the committee having legal jurisdiction over that agency.

The case rests, Mr. President. The next step is that of the Alien Property Office.

The Mask and the Face of John Bull

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SIEMINSKI. Mr. Speaker, how well do we understand John Bull?

We are told that the British Government consists of two parts, the dignified and the efficient. Royalty and members of the cabinet are dignified. Deputy ministers and members of the civil service are efficient. The former is the mask, and the latter the face of John Bull. Both promote the interests of Great Britain.

The question is, Are the United States and John Bull acting so that neither will be hurt in the future?

As I understand the British Foreign Office, it asks two questions of every project: First, will it work? Second, will it produce a profit? To cite several examples:

Recently, Newfoundland was a British Crown Colony. It operated at a loss. Crown status was withdrawn and she confederated with Canada.

In 1945 British interests in China were substantial. Chiang Kai-shek was regarded as a financial liability. England wrote him off her books. Four years later, when the Reds were in control,

England disclosed to us, for the first time, I am told, when she had cashiered Chiang.

In 1896 Japan pushed China out of Korea and tied her up by the Treaty of Shimonoseki. England cultivated a rising star and formalized her commercial alliance with Japan in 1902.

The world was gripped in an economic depression in June of 1931. In September of that year, Japan crossed the Yalu into Manchuria. It was not profitable for the British to answer the call to arms of Secretary of State Stimson to halt Japan's aggression. A few years later, great power dams were built on the Yalu River. They fed Japan's war machine.

Until 1914, British troops in the Far East were not part of the British Army. They served the interests of the British East India Co. Perhaps this explains why Lord Clive was able to operate as unilaterally in India as he did.

Historians list trade rivalry between England and Germany as the cause of World War I. The recuperative power of Germany was revealed in World War II. It is not passing strange that John Bull, therefore, regards Russia and China as future possible allies against a nascent Germany and a rampant Japan. The gleam of a thousand years shines in John Bull's eyes.

Does John Bull tax his people fairly? How sure are we that all income raised for a national use is credited to the Exchequer?

Why does John Bull give the monopolists or the boys in the ring such free wheeling on the world market? The Singapore rubber ring priced itself out of the United States market, thanks to the synthetic-rubber program of the Reconstruction Finance Corporation. To what extent was the sound and fury recently raised for the abolition of the RFC generated in Singapore? To what extent will the London stranglehold on copper and tin ease up in the future?

How well do we understand John Bull?

Many British consider Americans cowboys who ride the purple sage shooting it out with rustlers.

Hollywood, take a bow. Your cowboy films are popular in England.

What will John Bull say when he learns of our great affection for Hopalong Cassidy and for the cowboy whose mask is as dignified and efficient as his face? Heigh-ho Silver?

Powerful Foes Strengthen McCarthy

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Knoxville (Tenn.) Journal.

There being no objection, the article was ordered to be printed in the Record as follows:

POWERFUL FOES STRENGTHEN MCCARTHY

(By John O'Donnell)

WASHINGTON, D. C.—A generation ago an important political leader jumped his party line, snuffed the political breeze and charged into the Bull Moose stampede of 1912, believing that he was for the great T. R. Roosevelt because of "the enemies he had made."

At this moment, the Nation's most controversial political figure, Wisconsin's Republican Senator JOSEPH R. MCCARTHY has more powerful enemies than any man of either party in House, Senate, or any branch of the Government. And these enemies are his greatest strength.

In Washington, you will be told that Joe McCarthy is a dead political duck. Leave Washington—say for a political session such as the governors staged last week or go out where McCarthy has just made a speech as he did in Santa Fe—and the picture is reversed.

Outside of Washington, McCarthy is a symbol representing the simple declaration: "I'm against communism and sex perverts in the Government."

The enemies McCarthy has made have turned out to be his greatest political asset when he goes back to the grass roots where the votes came from.

According to the record, McCarthy's most violent publicity foes have these strange predilections in common:

1. Alger Hiss was a fine and fervent American until a Federal grand jury found him guilty and tossed him into jail for lying about his betrayal of our Government secrets.

2. Dr. Owen Lattimore is another patriotic but coarsely treated American who unfortunately has been getting the rough side of the McCarthy tongue. The same goes for Ambassador at Large Dr. Philip C. Jessup.

LINE OF THINKING IS HOT STUFF

3. The only way to save the Nation is to put General Eisenhower in the White House in 1952, preferably by a bipartisan vote. Truman thinks that General Marshall is the greatest living American. Marshall made Eisenhower F. D. R. made all of them, and Secretary of State Dean Acheson won't turn his back on Alger Hiss. Perfect.

There's no doubt that this line of thinking is really hot stuff here in the Capital at the moment. The hearty and encouraging note is that it doesn't get over back home.

What has frightened the foes of McCarthy is the political fact that McCarthy went up into adjoining Maryland in 1950, made a couple of speeches and destroyed the public career of the former Democratic Senator Millard Tydings. The votes of the Free State tossed Tydings into the political ashcan because they resented the whitewash treatment his Senate committee had given the State Department playboys and the manner in which he had perverted an ordered investigation of the State Department into a personal attack on McCarthy.

All of which brings up the effort by Connecticut's junior Senator, WILLIAM BENTON, to lead one flank of the anti-McCarthy drive on Capitol Hill. Benton already has introduced a resolution designed to get the Senate to kick McCarthy out on the grounds that the marine from Wisconsin has talked too much. Nothing will come of that.

BOWLES NOW FACES ROUGH GOING

On the contrary, Benton's former advertising partner, Chester Bowles, has faced rough going in seeking confirmation as Ambassador to somewhat pinko India. And

both BENTON and Bowles are soon to be put on the political carpet and questioned about political deals made in the last election—particularly in regard to keeping McCARTHY out of Connecticut during the campaign, and the deal made with respect to United States Senator BRIAN McMAHON and his shadow-boxing GOP opponent, Prescott Bush, of the administration's Wall Street banking firm of Brown Bros. & Harriman.

Imports it to note is the sudden shifts of political wind within 10 days in the hurricane blowing about the McCARTHY head.

In the first place, Harold Stassen, still powerful in the Midwest, although now completely out of the Presidential picture, has gone down the McCarthy line. He bluntly told the State Department that it is a liar and proved his point. That's important. Stassen still has a potent following of young, progressive Republicans in the Midwest.

Point is the fact that the foes of McCARTHY who wanted to needle the highly competent, wealthy, and personable Governor Kohler, of Wisconsin, to fight McCARTHY in the State primaries for the Senate nomination have lost their battle. The Governor has decided that he will fight with McCARTHY for reelection and never against him. That's important. A fight between the supporters of two such tough and youthful campaigners would have split the GOP in Wisconsin as it hasn't been ripped apart since the war. Democrats under Woodrow Wilson did their best to destroy the McCarthy of that era—the late United States Senator Robert La Follette.

Inflation, Politics, and Price Controls

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, November 14, 1951

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I include the St. Louis Union Trust Co. Letter No. 57, October 1951:

INFLATION, POLITICS, AND PRICE CONTROLS

The debate over price controls may be characterized as a sham battle from the point of view of economics. It has little relevance to the inflation problem. It is essentially political. Inflation is an excess of monetary demand in relation to the volume of goods available for purchase. It is too many dollars trying to buy too small a supply of goods. The only way to stop inflation is to restore the balance between monetary demand and the goods available for purchase. Stopping inflation requires either an increase in the supply of goods without a corresponding increase in purchasing power until the balance is restored or a curtailment in monetary demand until it corresponds to the amount of goods available.

Price controls do not restrain inflation but, on the contrary, actually promote inflation. When prices are held down artificially, the result is to increase the demand. With monetary incomes the same, there will be a greater demand for sirloin steaks at 75 cents a pound than at \$1.50 a pound. Price controls, by keeping official prices down, increase the demand.

Changes in prices in the free market affect not only the demand for goods but also the supply. High prices encourage increased

production because they make it more profitable for producers to supply the demand. When prices are held down artificially by price controls, they tend to squeeze the profit margin of producers—often make production unprofitable—and therefore tend to decrease the supply. If price controls are not to disrupt the proper functioning of our economy, it is essential that prices be permitted to reflect increases in costs. As the London Economist points out:

"If price controls have any useful purpose at all, there is certainly no justification for prohibiting an automatic increase in prices with an increase in costs. . . . No price control would be better than inflexible price control."¹

THE TERRIBLE CAPEHART AMENDMENT

What Mr. Truman calls the terrible Capehart amendment provides that price ceilings shall reflect increases in costs. If prices do not cover costs, they will result either in curtailment of production and shortages of goods, or in diverting goods to black markets. The announcement that only 2 out of 212 meat-packing companies invited to bid on Government orders for beef for the Army, submitted bids and could supply only 190,000 pounds of beef, instead of the 13,000,000 pounds the Government wants, is a dramatic illustration of how unrealistic price ceilings disrupt the economy and create artificial shortages. The packers didn't bid because they cannot get the beef under existing price ceilings.

When price controls cut production in particular industries, they frequently create supply bottlenecks in other industries. Often the indirect loss of production is far greater than that directly affected by ill-designed price limitations. A flagrant example is found in the machine-tool industry. Our whole defense effort depends upon machine tools. The London Economist points out in its American survey:

"Some of them [machine tools] are so complex they take from 3 months to a year to build and without them a defense program is nothing more than an oratorical blueprint. The machine-tool industry is delivering goods at only one-quarter the rate attained in the last war and some manufacturers will promise no deliveries before late 1953."²

Our entire defense effort has been effectively sabotaged by ill-conceived price controls on machine tools. This the Government admits. We quote a UP dispatch from Washington of August 21, 1951:

"The Government said today that price increases granted the machine-tool industry apparently had broken a bottleneck that had been hamstringing the defense program for more than a year."³

As Barron's Weekly points out:

"Five million dollars' worth of small tungsten carbide cutting tools supports an output of \$10,000,000,000 worth of automobiles. And their relation to military items is probably about the same. Why should there be any price regulation at all on items such as these? Obviously they have not the slightest bearing on the cost of living or anything in which the Office of Price Stabilization is supposed to be interested. Just as obviously regulation can and does impede production."⁴

Just why did it take the OPS more than a year to discover that price controls in the machine-tool industry were sabotaging the

entire defense program? Was it just bureaucratic incompetence and stupidity? Whoever is responsible, however well-meaning and patriotic he may be, has given aid and comfort to the Soviet Union.

Price controls also contribute to inflation by requiring for their enforcement a small army of job holders and snoopers who otherwise might be engaged in the production of useful goods and services. Barron's Weekly reports that there were "6,700 employees now working for OPS," and that "their number is slated to quintuple."⁵

Price controls increase demand and decrease supply. This increases inflation—it does not restrain it. Dr. Emerson P. Schmidt, economic research director of the United States Chamber of Commerce, says:

"A free price performs an enormously important function. When it rises, that helps to conserve scarce supplies, it stimulates greater effort at production. It encourages the use of, or the production of, substitutes. Price control, if effective, stops this automatic adjustment. Price control is an attempt to make the price tag say something which is not true. Price expresses the equilibrium between supplies and demands. Sitting on the price with the aid of law, directives, and the policeman, does nothing to improve the supply, and indeed discourages increased supply. And equally bad, price control enormously increases people's efforts to get the bargains, which control appears to promise."⁶

Price controls are useless in checking inflation, except in the case of monopoly prices. Monopoly prices are controlled prices which are higher than the prices which would be set by a free market and, therefore, can be reduced without destroying the incentive to produce. But the best way to attack monopoly prices is by means of antitrust legislation—not price controls. Our antitrust laws are a protection against monopoly prices by business. But there is no similar protection against monopoly prices in the field of agriculture, where the Government support programs often peg prices above the market. There is no such protection against monopoly prices for labor. If wages were the result of the free play of market forces, there would be no excuse for wage controls. But because wages are set by the coercive force of powerful labor monopolies, there is ample economic justification for rigid wage controls. There is a similar economic justification for doing away with farm price supports.

With these exceptions, holding prices down by price controls promotes inflation by widening the gap between too many dollars and too few goods. This truth has been demonstrated time and time again throughout history. There is nothing new about price controls. They were used by Hammurabi in Mesopotamia 2,000 years before the birth of Christ. In 301 A. D. in ancient Rome, the Emperor Diocletian issued his famous Edictum de Pretiis imposing maximum legal prices and wages.

According to Will Durant:

"The edict was until our time the most famous example of an attempt to replace economic laws by governmental decrees. Its failure was rapid and complete."⁷

The Encyclopaedia Britannica says:

"The edict was well-intended but . . . the actual effect was disastrous, and the edict soon fell into abeyance."⁸

PRICE CONTROLS ENFORCED BY THE GUILLOTINE

Price controls were tried in France 150 years ago during the French Revolution and, as they invariably do, failed to work. We quote from *Flat Money Inflation in France* by the late Andrew Dickson White:

"The first result of the maximum [price control laws enacted September 29, 1793] was that every means was taken to evade the fixed price imposed, and the farmers brought in as little produce as they possibly could. This increased the scarcity, and the people of the large cities were put on an allowance. Tickets were issued authorizing the bearer to obtain at the official prices a certain amount of bread or sugar or soap or wood or coal to cover immediate necessities. Shopkeepers therefore could not sell such goods without ruin. The result was that very many went out of business and the remainder forced buyers to pay enormous charges under the very natural excuse that the seller risked his life in trading at all. That this excuse was valid is easily seen by the daily lists of those condemned to the guillotine, in which not infrequently figure the names of men charged with violating the maximum laws. Manufacturers were very generally crippled and frequently destroyed, and agriculture was terribly depressed."

In the light of history, which shows that price controls never work, that they promote inflation rather than restrain it, that they disrupt the normal workings of the economy and bring misery rather than relief, then why is it that politicians always attempt to meet inflation with price control? There are two basic reasons for this attitude of politicians. First, most people, including many politicians, not only want inflation to continue because it increases their dollar incomes but also want to avoid the higher prices which are a consequence of inflation. They have the naive belief that if incomes increase and the supply of goods does not, price controls will enable them to buy all they want at no increase in price. That is why, as the London Economist puts it, "belief in this panacea [price controls] prevents governments from getting at the cause behind the symptoms."

The second reason that politicians always attempt to meet inflation with price controls is that inflation always is the result of governmental policies and the politicians want desperately to avoid blame for the higher prices which are the consequence of their inflationary policies. To point out that inflation is a result of government policies is not to condemn every governmental action which promotes inflation. For example, our present defense program to rebuild our military power and that of our allies is highly inflationary, but it certainly is necessary to our survival. But whether the governmental policies which promote inflation are necessary, or merely represent political demagoguery or incredibly stupid blunders, as they frequently do, the causes of inflation are always found in governmental policies.

Throughout history whenever governmental policies result in unpleasant consequences, the chief aim of politicians is to find a scapegoat for their own blunders and to shift the blame to someone else. Emperors, kings, dictators, and presidents play the role of Don Quixote and tilt with windmills in an effort to divert the attention of the people from the evils of government. Such practices are as old as recorded history. In ancient Rome it was good politics to feed Christians to the lions. At that time the

creaking top-heavy Roman bureaucracy and the ever-heavier tax burden required to support it had placed intolerable burdens upon the people. A scapegoat was desperately needed, and it was sound political strategy to divert the rage of the populace to the Christians and provide the Roman mob with sadistic entertainment even more spectacular than our televised congressional investigations. Hitler's slaughter of the Jews and Roosevelt's slanders of businessmen were slick, professional twentieth century applications of the political tactics which the Roman emperors used to persecute the Christians. We are not, of course, making a moral comparison between Hitler's slaughter of the Jews and Roosevelt using the businessman as a scapegoat. Yet from the standpoint, not of morals, but of political strategy, there was no difference at all between the techniques of Hitler and Roosevelt.

It is only in terms of politics that the agitation for rigid price controls makes sense. Political advocacy of price controls is based on the same principle as feeding Christians to the lions, slaughtering German Jews, and making business a "whipping boy" for the New Deal-Fair Deal. Its principal purpose is to shift the blame for Government-induced inflation from Government to a convenient scapegoat. As the London Economist correctly observes, "Price control is clearly mere preaching at symptoms." Such "preaching" is effective political propaganda. It is a "sure-fire" political formula but has no economic significance.

Not only is the demand for rigid price controls motivated by political rather than economic considerations, but the methods used to promote price controls are largely patterned after Communist techniques. Liberal advocates of rigid price controls appeal to emotion, not to reason. They use a smoke screen of emotion to conceal the dishonesty of their arguments. This is the technique that was used when the Communist press falsely branded the Taft-Hartley Act as a slave-labor act despite the fact that it protects the rank and file of labor against coercion and exploitation by union officials. Thereafter, liberals, labor leaders, and their press propagandists adopted this false Communist slave-labor slogan as their own. The same technique is now being used to smear those opposed to price controls. For example, Drew Pearson uses the emotional falsehood that they are "against the housewife." We quote:

"No housewives were present when the Senators debated price control, but this column is able to report who was for and who was against the housewife!"

Pearson reiterated this false theme in several of his columns. This is not economic discussion—it is unashamed demagoguery. Will Lissner, a member of the New York Times staff, has an article in the July 23, 1951, issue of the Socialist New Leader, entitled "Inflation and the NAM—Partners of Stalin." Its purpose is to smear opponents of price control through the guilt-by-association technique, branding them as partners of Stalin. It is an example of:

"The propaganda strategy perfected by Charles Michelson * * * and extended by Joseph Goebbels * * * seeking to destroy the reputation of an opponent by associating him, however unfairly, with some odious quality, attitude, policy, or personalities."

Democracy cannot long endure if government by slogan is substituted for a rational

discussion of issues, and public opinion is manipulated by the propaganda techniques originated by Lenin and perfected by Michelson, Stalin, Goebbels, and Hitler. The essence of this technique is to substitute highly emotional false slogans for a rational discussion of issues. Psychologists and public relations experts refer to such tactics as "the manipulation of emotional symbols." The growing use of these tactics by liberal politicians and propagandists is a serious threat to democracy. There is no question as to the Communist origin of this technique. Joseph Stalin, in his 479-page book *Leninism*, devotes several chapters to the discussion of the tactical use of emotional slogans. He even credits the success of the Bolshevik Revolution to the selection of effective slogans.

FAIRER PROPAGANDA FOR PRICE CONTROLS

This type of smear propaganda to discredit the opponents of price controls is put out by the propagandists for price controls, notwithstanding the fact that the overwhelming majority of economists is in substantial agreement that the only effective way to fight inflation is through indirect controls—that is, budgetary, fiscal, credit, and tax control—which can exert a decisive influence upon monetary demand. Even Defense Mobilizer Wilson and the President's Council of Economic Advisers, who necessarily must defend the Administration's program, admit that the direct control, which they advocate are of minor importance as compared with indirect control. Mr. Wilson says:

"It has been correctly said that direct price and wage controls treat only the symptoms of inflation rather than its basic cause."

The President's Council of Economic Advisers says:

"There is no more important single measure for combating inflation under present circumstances than the maintenance of a balanced budget."

"Price and wage controls would be doomed unless taxation, credit controls, and savings programs hold the inflationary pressure down to manageable proportions."

The Joint Committee of Congress on the Economic Report said:

"Efforts to control prices and wages, no matter how zealously and efficiently enforced, will be futile precisely to the extent that this Nation fails to remove the inflationary steam under the boiler now."

On January 12, 1951, 405 economists representing 43 colleges and universities submitted a statement about inflation to the Joint Congressional Committee on the Economic Report which said:

"The basic cause of inflation, an excess of money demand relative to available goods, must be attacked. Only adequate fiscal and monetary measures can remove this basic cause."

The London Economist says that "holding all prices down merely guarantees that it

[inflation] and its harmful distortions shall go on forever."¹

Whether inflation will be controlled, or whether we shall have further inflation, will depend primarily upon the aggregate money demand and its relation to the supply of goods. The Government policies that will have the greatest effect upon the volume of monetary demand and the supply of goods will be those concerned with the Government budget, taxes, interest rates on Government bonds, subsidized credit for housing, and the Controlled Materials Plan. If the Government wants to prevent further inflation, then a cut of eight to ten billion dollars in nondefense expenditures is urgently necessary. A tax program to be anti-inflationary should bear with great weight upon the lower income groups which in the aggregate do the bulk of the spending. The new tax bill passed by Congress, although far less objectionable than the tax proposals of the administration, does not meet this requirement. Taxing millionaires out of existence will have little or no effect upon the demand for goods. Taxing the person of small income who does the bulk of the spending will have a great effect upon the demand for goods. The excess-profits tax is an invitation to corporate extravagance, is highly inflationary, and should be repealed. The actions of Congress in easing installment credit restrictions and passing the Defense Housing Act to ease housing credit and add \$1,500,000,000 to the lending power of the FHA are distinctly inflationary. The Government should permit the interest rate to rise in order to restrain credit and to give some inducement to the public to save. Every dollar that is saved that otherwise might be spent is a dollar that doesn't go to market as monetary demand to bid prices up.

The Controlled Materials Plan announced in the latter part of July is more likely to promote inflation than to restrain it. Under this plan, our Government, instead of merely setting aside a certain portion of steel, aluminum, and copper production for military purposes, as it should do, is undertaking to allocate materials for nonmilitary production as well. The assumption that the men in Washington can perform this vast plan of allocation better than the free market is belied by experience. The CMP is an invitation to bureaucratic blunders like that which imposed unrealistic price controls on machine tools and sabotaged our defense program. As Barron's Weekly points out:

"The basic danger of the controlled-materials plan is that it puts into the hands of Government life and death powers over what every firm in the country and every industry may or may not produce."²

Congress fortunately rejected President Truman's demand that he be given authority to build and operate new plants, expand existing plants, and install new processes in private plants. It likewise rejected authority to license corporations in order to enforce price regulations. The powers that President Truman requested were essentially those set forth in the old Spence bill, which was a blueprint for totalitarian socialism. If to the powers given the Government under the controlled-materials plan were added Presidential authority to build Government steel plants and other plants to compete with private industry and authority to control business by licensing, the businessman would be completely at the mercy of Government. It would give the bureaucrats life and death power over the American economy and the economic activities of every farmer and businessman in the country.

The present malodorous RFC scandals show what happens when bureaucrats are given control of a small section of our economy—the section composed of businessmen who can't compete in the open market but depend upon Government favors for undeserved profits. If such bureaucratic control were extended to cover all business, it takes very little imagination to see what might happen.

POWER-HUNGRY BUREAUCRATS

The power-hungry bureaucrats in Washington are so well entrenched that they have become largely self-perpetuating. Administrations come and go, but bureaus go on forever. The President and Congress can create new bureaus and agencies, expand existing ones and add to their powers. But neither the President nor Congress can do much to cut down the permanent bureaucracy. Government agencies and bureaus are relatively independent of the administration and able to exert political pressure on Congress to get what they want. The principal objective of the permanent Washington bureaucracy is the aggrandizement of their own power. They are skilled in lobbying and propaganda and are using the defense emergency to promote further socialism, to get a strangle hold on the American economy, and to increase and perpetuate their own power. They constitute a totalitarian threat more dangerous than communism.

TOWNER PHELAN,

Vice President, St. Louis Union Trust Co.

Break With Reds Urged by Marines

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Savannah (Ga.) Morning News of September 21, 1951.

There being no objection, the article was ordered to be printed in the Record as follows:

BREAK WITH REDS URGED BY MARINES—UNITED STATES RECOGNITION OF RUSSIA TERMED "BLUNDER"—RESOLUTION IS PASSED—COPIES TO BE SENT TO TRUMAN AND ACHESON

The national convention of the Marine Corps League in a strongly worded resolution yesterday called on the United States Government to immediately break off diplomatic relations with Soviet Russia.

The resolution branded as a horrible blunder America's ill-advised recognition of Russia and flatly accused the Kremlin of instigating the Korean police action.

A copy of the resolution was ordered dispatched immediately to President Truman, Secretary of State Dean Acheson, and to the President of the Senate and Speaker of the House.

The resolution said United States recognition of Russia "admitted the pirate Bolsheviks to the decent society of nations and provided a false cloak of legality and respectability for Communist intrigues and aggressions."

Delegates urged citizens to "forthwith proceed to correct this grievous error and immediately take the strategic initiative away from the international Communist

outlaws" by demanding the Government's deplorable action in recognizing Soviet Russia be immediately repealed.

The resolution, authorized by Joe Probst, of Chicago, follows in full:

"Whereas our fellow marines and their brothers in the Armed Forces are being killed and wounded in appalling numbers in the Korean police action because of Communist aggression; and

"Whereas there is no doubt in the minds of all clear-thinking Americans that the root of this evil is the international Communist conspiracy spreading its cancerous growth from the Kremlin in Moscow; and

"Whereas Americans know beyond a doubt that our real enemy is communism and that communism is the same liberty-destroying scourge throughout the world and that we are now arming ourselves for invincible and decisive action; and

"Whereas we now realize our horrible blunder in attempting the hopeless task of treating with communism by our ill-advised recognition of Soviet Russia, which action admitted the pirate Bolsheviks to the decent society of nations and provided a false cloak of legality and respectability for Communist intrigues and aggressions. Now, therefore be it

"Resolved, That we forthwith proceed to correct this grievous error and immediately take the strategic initiative away from the international Communist outlaws by demanding that our Government's deplorable action in recognizing Soviet Russia be immediately repealed and that we, the Marine Corps League, gathered here in a principal shrine of American liberty, the historic city of Savannah, Ga., in our twenty-eighth national convention, call upon our Congress of the United States to provide the fundamental corrective by severing all diplomatic relations with the Union of Socialist Soviets of Russia, and that copies of this resolution be sent immediately to the President of the United States of America, the Secretary of State, the President of the Senate, and the Speaker of the House of Representatives."

Gen. Douglas MacArthur's Speech in Cleveland

EXTENSION OF REMARKS OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BENDER. Mr. Speaker, under permission previously granted me, I should like to include the following speech by Gen. Douglas MacArthur delivered at the Cleveland Public Hall on September 6, 1951:

It is gratifying indeed to have this opportunity to address the citizens of Cleveland and the State of Ohio—a State which has contributed so abundantly to America's leadership both past and contemporary. Indeed, indications multiply that this leadership may even increase in the not too distant future.

No section of our country symbolizes more forcefully the pattern of our national progress than does this great Midwest whose fertile fields and thriving industry combine to reflect the constructive energy of our people. You have molded a standard and pattern of life known to no other nation of the world, and I pray that we will have the vision and courage and statesmanship to keep

¹ Economist (London), December 20, 1947, p. 986.

² Barron's, August 6, 1951, p. 1.

it that way --that we will preserve an America which will provide increasing, not diminishing, opportunities for human advancement.

EFFECTS OF VICTORY OVER AXIS REVIEWED

We have just passed another anniversary of the end of the war with Japan. Six years ago with a few strokes of the pen a calm descended upon the battlefields of the world and the guns grew silent. Military victory had been achieved for our cause and men turned their thoughts from the task of mass killing to the higher duty of international restoration, from destroying to rebuilding, from destruction to construction. Everywhere in the free world they lifted up their heads and hearts in thanksgiving for the advent of a peace in which ethics and morality based upon truth and justice would thereafter fashion the universal code.

Then, more than ever in the history of the modern world, a materially strong and spiritually vibrant leadership was needed to consolidate the victory into a truly enduring peace for all of the human race. America at the very apex of her military power was the logical Nation to which the world turned for such leadership. It was a crucial moment—one of the greatest opportunities ever known.

LEADERS FAIL TO SEIZ CHANCE

But our political and military leaders failed to comprehend it. Sensitive only to the expediences of the hour, they dissipated with reckless haste that predominant military power which was the key to the situation.

Our forces were rapidly and completely demobilized and the great stores of war matériel which had been accumulated were disposed of with irresponsible waste and abandon.

The world was thus left exposed and vulnerable to an international communism whose long-published plan had been to await just such a favorable opportunity to establish dominion over the free nations. The stage had perhaps been unwittingly set in secret and most unfortunate war conferences. The events which followed will cast their shadow upon history for all time.

Peoples with long traditions of human freedom progressively fell victims to a type of international brigandage and blackmail, and the so-called iron curtain descended rapidly upon large parts of Europe and Asia.

As events have unfolded, the truth has become clear.

VICTORY IS OFFSET BY RPD SUCCESS

Our great military victory has been offset, largely because of military unpreparedness, by the political successes of the Kremlin. Our diplomatic blunders increased as our senseless disarmament became a reality.

And now the disastrous cycle is completed as those same leaders who lost to the world the one great chance it has had for enduring universal peace, frantically endeavor, by arousing a frenzy of fear throughout the land, to gear anew our energies and resources, to rebuild our dissipated strength and to face again a future of total war.

Our need for adequate military defense, with world tensions as they were and are, is and should have been completely evident even before the end of the war. By what faith then can we find hope in those whose past judgments so grievously erred—who deliberately disarmed in the face of threatened communism?

Can they now be blindly trusted as they so vehemently demand to set an unerring course to our future well-being and security? There are those of us who from neither partisan affiliation nor with political purpose think not.

U N BECOMES PEACE AGENCY

At war's end the main agency for maintaining the peace became the United Nations. This organization was conceived in a common desire that the scourge of war should not again be visited upon the earth. It was dedicated to the principle that all mankind of inalienable right should live in justice and liberty and peace.

It represents perhaps the noblest effort man has yet made to evolve a universal code based upon the highest of moral precepts. It became the keystone to an arch of universal hope.

Yet in practice its efforts become increasingly doubtful of ultimate success. Its organization is inherently weak, legislatively, judicially, and executively. It lacks legislative strength because its members, not being elected but merely appointed, are not answerable directly to their people. It lacks judicial strength because there is no accepted international code of sufficient moral authority or purpose to mold and guide its decisions. It lacks executive strength because it controls no agencies of sufficient power to enforce its mandates.

FAILURE THREATENS FOR MANY REASONS

It threatens to fail if the innate selfishness of its members does not yield to universal needs, if the mechanics of its operations are not corrected to prevent the will of one nation from counterbalancing the collective will of the others; if it does not obtain acceptance by member nations of its lawful decisions, if it does not stop obstructionist tactics, even by expulsion if necessary, of its own unruly members, if regional military alliances must be organized within its membership to undertake collective security measures against threat from other members; if it allows itself to be reduced to a mere forum for meaningless and acrimonious debate, and a springboard for propaganda.

Unless a strong and dynamic sense of responsibility emerges within its ranks capable of rallying the forces of good throughout the world, of establishing a higher moral tone to its deliberations and activities, of correcting its existing institutional and mechanical weaknesses, the United Nations may well go the way of its predecessor league and perish as a force to guide civilization.

But the great moral and spiritual purpose which animated its formation—the abolition of war from the face of the earth—will always live and a way must be found to achieve that purpose. This way cannot be found, however, if nations are so blind as not to see their own weaknesses—so weak as not to correct them.

CONQUERED JAPAN IS BRIGHT SPOT

In this postwar period of general failure to attain real peace one of the bright spots has been conquered Japan. That nation and its people long boasting of many centuries of unbroken military success—a self-sufficient warrior race with a history of almost complete isolation from the rest of the world—at war's end was reduced largely to rubble with its people impoverished and broken in mind, body and spirit.

The sudden and general destruction of Japanese institutions brought about by complete defeat left a spiritual vacuum in Japanese life to be filled either by a philosophy of good, or a philosophy of evil. Fortunately for Japan and for the free world, the country was spared the dreadful consequences of a Soviet military occupation and was brought instead within the benign guidance of the American people.

Under this beneficent influence the Japanese gradually lifted themselves from the ashes of defeat and started to build a new nation—a nation dedicated to the pursuit

of new concepts and new ideals, fashioned from a blend between the best of their own ancient culture and those high precepts of ethics and morals which have been the great pillars supporting America's origin and growth.

OCCUPATION HAD CHRISTIAN PURPOSE

This oriental nation under the shadow of a continent plagued by the cruel misery of unending wars, pillage and natural disasters, proved willing and adept under the guiding hand of an occupation not conceived in a spirit of vengeance or mastery, of victor over vanquished, but committed to the Christian purpose of helping a defeated, bewildered and despairing people recreate in the East a nation largely designed in the image of the West.

New Japan was thus erected upon free institutions, somewhat similar to our own, which permitted the development of a moral base which cannot fail to favorably influence the course of events in Asia for generations to come. Discarded is the traditional intolerance of human rights, the restrictions upon human liberties, the callousness to human life, and in their place have been accepted and fused into the Japanese heart many of the Christian virtues so predominantly embodied in the American character.

An enlightened constitution has become the great charter of Japanese liberty with enabling laws which give full effect to its immutable precepts.

CALLS GOVERNMENT REPRESENTATIVE

The government has become truly representative of the popular will, deriving its just powers from the consent of the governed. The principle of local autonomy has been established. This permits the balance of political power to rest with the citizen at the community level and thus serves as a constant check against the excesses of centralized authority.

The hated system of land tenure, so contributory to general unrest in Asia, has been abolished. Every farmer is now accorded the right and dignity of ownership of the land he long has tilled.

He thus reaps the full fruits which result from his toil and labors with the incentive of free enterprise to maximize his effort to achieve increasing production. Representing over a half of Japan's total population, the agriculture workers have become an invincible barrier against the advance of socialistic ideas which would relegate all to the indignity of state servitude.

Labor through the protection of modern laws has come into a new and heretofore unknown dignity and is making rapid strides along the course of a sound and healthy movement. The schools have been rid of the strictures upon academic freedom and public education is provided to all of the youth of the land.

Universal suffrage has been established and the women of Japan have assumed their rightful role in the political life of the nation. With dignity and resolution they have brought to bear upon public affairs the morality which centers in the home and are progressively asserting a strong and healthy influence upon the course of Japan's political destiny.

The courts are proceeding in their administrative and judicial roles with universally accepted principles of justice firmly implanted in the form of their procedure. The police have ceased to be masters and have become instead servants of the people with a decentralization in organization which permits exercise of their functions at the community, rather than national, level of government.

The economy of Japan has made rapid and effective advances toward the full restoration of stability and self-sufficiency and has achieved a sound basis for a frugal public administration. For the past 3 years, the national budget has been in complete balance with savings to permit substantial reductions in the tax load upon the people and corresponding raises in their living standard.

JEFFERSON'S ADVICE ON ECONOMY QUOTED

Japan's present course in the economy of public administration follows closely the pattern sagely advised by Thomas Jefferson when he warned in speaking of our own Government.

"I place economy among the first and most important virtues and public debt as the greatest of dangers to be feared. To preserve our independence, we must not let our leaders load us with perpetual debt. We must make our choice between economy and liberty, or profusion and servitude. The same prudence which in private life would forbid our paying our money for unexplained projects, forbids it in the disposition of public money. We are endeavoring to reduce the Government to the practice of rigid economy to avoid burdening the people and arming the magistrate with a patronage of money which might be used to corrupt the principle of government."

If Japan continues to heed this far-sighted warning and our own leaders who pretend to be disciples of the Jeffersonian teachings continue to ignore it, the time may well come when the Japanese people will be firmly established within the protective folds of our own cherished liberties, while we ourselves shall have lost them because of the assumption of our leaders of that "patronage of money" with its consequent corruption of government against which Jefferson so clearly warned.

In such a tragic eventuality, we would be hard put to it indeed to answer the charge of our children and our children's children that we had recklessly squandered their rightful heritage of liberty, resource, and opportunity.

WITH OUR SUPPORT JAPAN CAN DEFEND ITS HOMELAND

This is but a brief outline of the new Japan which is about to be restored to a position of international dignity and equality under a peace treaty which as presently proposed, while far from flawless, embodies much of human justice and enlightenment. It is a Japan which may now assume the burden of preparing its own ground defense against predatory attack and thus in short time release our own beloved divisions for return home.

With our air and naval support, Japan can with no great difficulty defend its own homeland, which forms so vital a sector of the inland defense system buttressing freedom and peace on the Pacific. It is a Japan in which we of the free world may find an alliance which shall merit our full faith. I realize well that there are nations who fought with us to victory while suffering grievous hurt from Japanese depredation who understandably disagree in whole or in part.

It is hard for them to accept the realistic but tragic fact that in modern war the victor is also the loser. He suffers materially with the vanquished—oftentimes more than does the vanquished. Indeed, our own country in the aftermath of victory pays with a burden of accumulated debt such as to place a mortgage upon the energy and resource of many future generations.

DISTURBED OVER DRIFT TOWARD TOTALITARIAN RULE

May we not hope that eventually through wise statesmanship and Christian tolerance the scars still left in war's wake may be

finally healed and that victor and vanquished as befits the sacred cause of human freedom will be invincibly bound together in mutual preservation.

Since my return from service abroad I have enjoyed the privilege, the freedom and the opportunities of private citizenship. I have seen many new and wonderful things but some which to me create a disturbing outlook for the future. Possibly one of the most pernicious is our steady drift toward totalitarian rule with the suppression of those personal liberties which have formed the foundation stones to our political, economic, and social advance to national greatness.

Our Government now differs substantially from the design of our forefathers as laid down in the Constitution. They envisaged a federation of sovereign States with only such limited power resting in the Federal authority as became necessary to serve the common interests of all.

But under the stress of national emergencies during the past two decades, there has been a persistent and progressive centralization of power in the Federal Government with only superficial restoration to the States and the people as emergencies subsided. This drift has resulted in an increasingly dangerous paternalistic relationship between Federal Government and private citizen, with the mushrooming of agency after agency designed to control the individual.

Authority specifically reserved to the States by constitutional mandate has been ignored in the ravenous effort to further centralize the political power. Within the Federal Government itself there has been a further and dangerous centralization.

SEE TRFND TOWARD THOUGHT CONTROL

For example, the Department of State, originally established for the sole purpose of the conduct of foreign diplomacy, has become in effect a general operating agency of Government, exercising authority and influence over many facets of executive administration formerly reserved to the President or the heads of other departments. The Department of State indeed is rapidly assuming the character of a prime ministry notwithstanding that its secretary is an appointed official, neither chosen by nor answerable directly to the people.

This drift toward totalitarian rule is reflected not only in this shift toward centralized power, but as well in the violent manner in which exception is taken to the citizens' voice when raised in criticism of those who exercise the political power.

There seems to be a determination to suppress individual voice and opinion which can only be regarded as symptomatic of the beginning of a general trend toward mass thought control. Abusive language and arbitrary action, rather than calm, dispassionate and just argument, ill becomes the leadership of a great nation conceived in liberty and dedicated to a course of morality and justice. It challenges the concept of free speech and is an attempt at direct suppression through intimidation of that most vital check against the abuse of political power—public criticism.

If long countenanced by free men, it can but lead to those controls upon conviction and conscience which traditionally have formed stepping stones to dictatorial power.

The issues which today confront the Nation are clearly defined and so fundamental as to directly involve the very survival of the Republic.

Are we going to preserve the religious base to our origin, our growth, and our progress, or yield to the devious assaults of atheistic or other antireligious forces?

Are we going to maintain our present course toward state socialism with com-

munist just beyond or reverse the present trend and regain our hold upon our heritage of liberty and freedom?

Are we going to squander our limited resources to the point of our own inevitable exhaustion or adopt common-sense policies of frugality which will insure financial stability in our time and a worth-while heritage in that of our progeny?

Are we going to continue to yield personal liberties and community autonomy to the steady and inexorable centralization of all political power or restore the Republic to constitutional direction, regain our personal liberties, and reassume the individual State's primary responsibility and authority in the conduct of local affairs?

IMMUTABLE PRECEPTS OF THE TEN COMMANDMENTS

Are we going to permit a continuing decline in public and private morality or re-establish high ethical standards as the means of regaining a diminishing faith in the integrity of our public and private institutions?

Are we going to continue to permit the pressure of alien doctrines to strongly influence the orientation of foreign and domestic policy or regain trust in our own traditions, experience, and free institutions, and the wisdom of our own people?

In short, is American life of the future to be characterized by freedom or by servitude, strength or weakness? The answer must be clear and unequivocal if we are to avoid the pitfalls toward which we are now heading with such certainty. In many respects it is not to be found in any dogma of political philosophy, but in those immutable precepts which underlie the Ten Commandments. During the 5 months since my return, I have been encouraged to believe that our citizens will not complacently tolerate further incursions against their cherished liberties and will move to correct this drift away from truly representative government.

FACES OF AMERICANS REFLECT SOUL OF LIBERTY

I have found this encouragement in the rare opportunity to search the faces of millions of my fellow countrymen. Therein I have been given understanding of the meaning of Abraham Lincoln when he said:

"To the salvation of the Union there needs but one single thing—the hearts of a people like yours. When the people rise in a mass in behalf of the liberties of the country, truly it may be said that (nothing can) prevail against them."

I have seen in the faces of the American people that to which Mr. Lincoln prophetically referred. I have clearly seen that the soul of liberty is still living and vibrant in the American heart. It is neither Democratic nor Republican but American. It will assert itself by constitutional process and with invincible force in the battle to save the Republic. The people will still rule.

In This Battle Report, Washington, Dr. John R. Steelman, the Assistant to the President, Tells the American People What They Can Do To Help Prevent Another World-Wide War

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. BOYKIN. Mr. Speaker, I repeat what I have stated on several occasions,

that Dr. John R. Steelman, the Assistant to the President, has in my opinion for more than a year past, and without a single penny of expense to the taxpayers, been televising to the American people the most authoritative information on current topics of the day that is broadcast from Washington.

Each Sunday afternoon, he has brought to the National Broadcasting Co. television network and its coaxials, Cabinet members, leaders of executive departments of Government, top-ranking officials of the Army, the Navy, the Air Force, and the Marines, of our own Government as well as of other free governments throughout the world. These men, seated beside him in the studios of NBC, make intimate and direct report to the people of the United States on topics that are of interest to them as of that very hour.

Mr. Speaker, I have never known any man who gave so unselfishly as does Dr. Steelman of his time and energy—piled on top of his terrifically busy schedule of official duties—to combat the forces of ungodliness, communism, and aggression, that have been unloosed in this world.

In this telecast, Dr. Steelman outlines a plan in which he proposes that during the Christmas holidays there be a special series of broadcasts to free Europe and Latin America, as well as to Turkey and Israel in the Middle East. He is now arranging that Americans from many walks of life participate—churchmen of all denominations, labor and farm leaders, educators, many of our great actors, actresses, and musicians—and just plain citizens. He proposes that these broadcasts be made in 14 languages, each program to carry a message of friendship.

Mr. Speaker, here is a real, honest-to-goodness, down-to-earth proposal, in which practically every person in these United States can take part to end war for all times, and by merely writing a letter.

In closing his personal statement on this telecast, Dr. Steelman simply says:

I hope you all will be saying "Merry Christmas and Happy New Year" to millions of people in many countries, who are allied with you to prevent war.

And then continues:

Beginning tomorrow, all of my letters which are going abroad will carry the message about the Voice of America and its Yuletide program. I hope that you will join with me and will write at least one letter this week to someone in free Europe, in Latin America, in Turkey, or in Israel.

Mr. Speaker, I have never sat before my television set to hear a single rendition of Battle Report—Washington without realizing the tremendous force for good that was going out over the air of the television network of the National Broadcasting Co.

This particular broadcast was of great personal interest. Dr. Steelman had as his guests the Honorable Willard L. Thorp, Assistant Secretary for Economic Affairs of the Department of State, who discussed the problem of cutting off the vital war supplies to the Red Chinese

and all the Communist forces of aggression in Asia.

His next guest was Col. William E. Bertram of the United States Air Force—who said in part:

After arriving in Korea, I was assigned command of the Twenty-seventh Fighter Group of the Twenty-seventh Fighter Escort Wing. Sixty percent of the fighter pilots were veterans of World War II. The average age was 29—and most have wives and kids back home.

Our assigned missions included everything a fighter airplane can do. We escorted bombers. Furnished close support for ground troops. Fought air-to-air combat with the Communist air force. Maintained defense alert and carried out a consistent interdiction against enemy lines.

Colonel Bertram then went on to tell of the actual fighting as it takes place and as viewed from the inside of a United States Air Force jet plane.

The next guest was Capt. Gernard Dean, United States Army Signal Corps—who plainly and lucidly discussed research with respect to rockets—that disclose data and collect air samples of from 20 to 55 miles above the earth in order to better understand the atmosphere—and furnish information to help solve various problems of both military and civilian importance.

In addition to the foregoing speakers, Dr. Steelman brought to the television—Maj. Carl Sitter and Maj. Reginald Myers—two members of the Marine Corps—upon whom President Truman has bestowed the highest award that a grateful Nation can extend—the Congressional Medal of Honor. Accompanying the presence of these two distinguished American fighters and heroes—actual motion pictures in which these marines distinguished themselves were brought to the viewers all over America.

Mr. Speaker, I not alone want my colleagues to read this letter-writing proposal made by Dr. Steelman on this "Battle Report—Washington"—but I want to suggest that each and every one of you join with him in disseminating this Christmas and Christian message he desires to broadcast to the people of the free world.

It is for that reason that I am extending my remarks and including in this record of our proceedings in the House this script of Battle Report, Washington.

The producer-director is Ted Ayers; the assistant producer, Jean Montgomery; commentary is by David Brinkley; script by Lou Hazam, film editors are Bill Brooks and Bill McDonald; and the art work accompanying is by Joseph Ferrier.

The script is as follows:

MR. DAVID BRINKLEY. In Korea, the rocket's red glare and bombs bursting in air rock the enemy confronting this spectacular nighttime Marine barrage. As the fire of their rockets dramatically lights up the battle front, our news cameras bring you now your 60-second Battle Report, Washington.

Today on Battle Report an assistant Secretary of State tells what we are doing to keep the West's strategic supplies out of Russia's hands. Back from MIG alley in Korea, the former Air Force commander of the Twenty-seventh Fighter-Escort Group, with a first-hand report on our jets in action

there. An Army Signal Corps expert reveals some little-known facts about research now going on into the nature of the upper atmosphere of the earth—research accomplished with the help of rockets. Two Marines describe their own personal experiences in Korea that recently won them the highest award of the Nation—the prized Congressional Medal of Honor. And the assistant to the President—Dr. John R. Steelman.

So, against a world in crisis, this week as usual our guests are standing by to report on the latest developments in the battle against Soviet imperialism, but first—the Assistant to the President, Dr. John R. Steelman.

DR. JOHN R. STEELMAN. Good afternoon, ladies and gentlemen. Almost every day I hear people ask the question, "What can I do to help prevent another world war?" They feel helpless in a world which they believe is rushing headlong toward destruction. They sincerely want to do something, but most of the things they think about seem impractical. Of course, there are many things that every American can do and this afternoon I am going to tell you about one of them.

This year, during the holiday season, December 24 to January 1, the Voice of America will broadcast a special series of programs to all the countries of free Europe and Latin America, and, also, to Turkey and Israel in the Middle East. Famous Americans from many walks of life will participate—actors and actresses from New York and Hollywood, churchmen from all denominations, labor leaders, educators, many of our greatest musicians, farmers, and just plain citizens. Every program will carry a message of friendship. They will be broadcast in 14 languages. The spirit of Christmas—peace on earth, good will toward men will be carried by the magic of trans-Atlantic radio into many millions of homes.

Now, here is what we can do. Almost every one of us has some relative, friend, acquaintance, or business associate in free Europe—in Latin America, in Turkey, or in Israel. Maybe we have not written for a long time. Maybe our meeting was only a passing acquaintance on shipboard or on a railway train. But now is the time to look up that old address book and to write about the special programs which the Voice of America will broadcast from December 24 to January 1.

If you are a businessman and do not wish to incorporate the message into your letter, have it written on the envelope. Simply say, "Listen to the Voice of America, December 24 to January 1."

Obviously, it is important to every American that the largest possible audience be built up for these programs. The more people who hear them—the more friends we will make. You can add to this audience. You can help to make our friends and allies feel closer to us and to know we are united with them in a gigantic crusade for peace.

The messages which the Voice of America will carry will be your messages. You will be saying Merry Christmas and Happy New Year to millions of persons in many countries who are allied with you to prevent war.

Beginning tomorrow all my letters going abroad will carry the message about the Voice of America. I hope you join with me and write at least one letter this week to someone in free Europe—in Latin America—in Turkey—or in Israel.

MR. BRINKLEY. Indochina—another "border in the balance" in the free world's struggle against the Soviet's ambitions in Asia. Here Red assassins recently stabbed to death French Commissioner Jean de Raymond—the fourth high official in southeast Asia to meet such a violent end. The aroused French and Vietnam troops comb

the rice paddies to search out the killer, and blast at Red guerrillas now infiltrating French rubber and pepper plantations. The guerrillas, on the other hand, are determined to keep their communication lines open to Thailand from which they smuggle guns and ammunition. Between Indochina and Korea lies Hong Kong, shown here. Once one of the world's busiest ports, it begins to see its trade with the Chinese mainland dry up as all shipments of strategic goods to China are now banned. How are we doing in cutting off vital war supplies to the Reds in Asia? Here with an answer is the State Department's Assistant Secretary for Economic Affairs, Willard Thorp.

Mr. WILLARD L. THORP. We all know that the major effort in Korea is being made by the foot soldiers of the United States, and other United Nations countries who have slugged it out in places like Heartbreak Ridge and by the U. N. Air Forces in their bombing and their jet sorties with the MIG's. But there are important economic steps which support the military operations. One of these is the speeding up of mobilization and defense production here at home. Another is depriving the aggressor of the things they need to wage war.

China and North Korea, like all other countries, are dependent upon the outside world for certain things they need. However, China is not a country whose needs from the outside are so essential that a complete economic embargo would stop the fighting in Korea. China's own production supplemented by the things which are being supplied by the Soviet Union makes our enemies in Korea fairly self-sufficient in meeting their military requirements. Nevertheless life is being made much more difficult for them through economic pressure, with the pinch really being felt on such items as petroleum, cotton, and transportation equipment.

Even before the war in Korea, the United States was restricting its exports to China. In 1949, when the Chinese Communists first gained control of ports on the Chinese coast, we immediately applied restrictions on highly strategic items such as were already in effect against the Soviet bloc. Then, when the North Koreans invaded South Korea, we slapped an embargo on the shipments of all items of strategic value. When the Chinese Communists intervened, United States trade with China was stopped entirely. Chinese Communist assets in this country were frozen; and our ships were forbidden to call at ports on the Chinese mainland. The progressive cutting off of trade with China meant that that country was deprived of such essential imports from us as raw cotton, chemicals, machinery, petroleum products, and metals.

Since 1949, the Western European countries and Canada have been restricting their trade in strategic materials with the Soviet Union and its satellites, and they also extended their controls to cover Communist China and North Korea. Japan, too, tightened its trade controls. The Government of Hong Kong began applying real controls in August 1951, and has progressively extended their scope and severity. Japanese and Hong Kong controls are very important, since, historically, Japan has traded actively with China, and because Hong Kong is the main transshipment point in the area.

After the Chinese intervened in the Korean war, the General Assembly of the United Nations considered economic action against the aggressors. In May, it adopted a resolution recommending that every country—not only those which are members of the United Nations—should apply an embargo on shipments to areas under control of Communist China and North Korea of

arms, ammunition, and implements of war, atomic energy materials, petroleum, transportation materials of strategic value, and items useful in the production of arms, ammunition and implements of war. This resolution was sent to members of the United Nations and to 23 nonmembers as well. Some of them do not have any trade with China, anyway. Forty-three countries have accepted the resolution and are actively applying it. And among those 43 countries are all of the principal suppliers of strategic items to China, except, of course, the Soviet bloc countries. Naturally, the Soviet Union and its satellites rejected the resolution. In addition to controls on commodities, a number of important shipping nations have imposed controls over the use of their ships in trade with Communist China.

The United Nations embargo will be discussed at the General Assembly in Paris this month. This operation has a double value. It helps to limit the military strength of the aggressor in Korea, and it demonstrates that the free nations are willing to stand together to fight aggression both on the battlefield and in the market place.

Mr. BRINKLEY. F-84 Thunder jets take off to continue the air war in Korea. Because gun-cameras are mounted, you get now one of the most dramatic views of a battle with a Russian-built MIG yet to come out of the war. In essence, you are seated with the pilot as he roars over MIG alley sweeping the skies. He encounters the Red enemy and peels off to let him have it. In these lethal passes, you are traveling over 600 miles an hour. In a moment, you will be in position on the MIG's tail. There'll be a split second maneuver—and then the bull's eye burst as the Communist plane dives to its end.

Veteran of many an engagement like this is our next guest, who flew in the China-Burma-India theater in World War II, and has over a hundred combat missions to his credit in Korea. He returned only 2 months ago from commanding the Air Force's Twenty-seventh Fighter-Escort Group credited with inflicting casualties on 15,000 enemy troops, destroying or damaging 35 Red planes, thousands of buildings, and hundreds of railway cars. Here he is, Col. William E. Bertram.

Col. WILLIAM E. BERTRAM. Two of the most important characteristics of air power are flexibility and mobility. Flexibility means the ability to perform a variety of necessary missions when required, and mobility means the capability of doing them rapidly and wherever the need may arise. The Air Force has emphasized both of these key capabilities in its concept of the tactical air mission. I should like to illustrate.

On November 7, of last year, we returned to Bergstrom Air Force Base at Austin, Tex., having just completed the first mass transoceanic jet flight in history. We had flown 180 Republic F-84 jet fighters from Austin, Tex., to Germany, to help modernize the Air Force fighter units there.

Five days later, we received orders to take the Twenty-seventh Fighter-Escort Wing to Korea. In accord with the Strategic Air Command mobility plan, we took all the airplanes, people, and equipment, necessary to operate in combat with us. Twenty-seven days later we flew our first mission in Korea.

It was not an easy or a pleasant job. But during the 9 months the Twenty-seventh was there, we discovered several important points regarding the use of the F-84 in combat.

You may remember that there was some criticism of the Air Force in the early days of the Korean war. Doubters said that the jet airplane could not operate under combat conditions. They said it was too fast to furnish support to ground troops. It would

never be able to fly off hastily built runways. It would be too vulnerable to ground fire, antiaircraft and enemy airplanes.

Shortly after arriving in Korea, I assumed command of the Twenty-seventh Fighter Group of the Twenty-seventh Fighter-Escort Wing. I am very proud of that outfit and would like to tell you a little about our combat operations.

To begin with, we had a terrific group of pilots, crew chiefs, and other supporting personnel. Sixty percent of our pilots were veterans of World War II. We were not reckless, airborne hot-rod drivers. The average age was about twenty-nine, and most of the boys had wives and kids back home.

Our assigned missions included everything a fighter airplane can do. We escorted bombers, furnished close support for ground troops, fought air to air combat with the Communist air force. We maintained an air defense alert, and carried out a consistent interdiction campaign against enemy supply lines.

I would like to say something about interdiction. We think it is a very important part of the tactical air operation. It means using the airplane to go back of the enemy's line and knock out tanks before they can fight our infantry. It means cutting rail lines that carry the enemy's supplies. It involves hitting warehouses, vehicles, and stores of equipment before he has a chance to use them against our troops. Interdiction will never be complete, but a planned campaign means the opposition has to use a high percentage of men and equipment for supply that would otherwise be available for combat. It creates a vacuum between the front line of the enemy and his distant supply sources.

A writer for Pegasus magazine, returning from Korea last month—makes this statement: "The relentless pressure of this summer's interdiction program—averaging 100 rail cuts a day and netting thousands of trucks and other vehicles each week—is beginning now to show results that could be the most far-reaching of the entire Korean war."

My report to you would not be complete without a word about the ability of the F-84, to bring us back alive when the going was rough. We flew off runways so bumpy they felt like cobblestone streets. It seemed there was always either dust or mud. Almost every mission ran into bad weather somewhere along the way. Our airplanes were hit with small arms fire, flak, and cannon shells from MIG-15's. One pilot followed a target so low he bounced off the ground when he pulled out of his dive. But they kept coming back—and, equally important—going out to fight again.

Mr. BRINKLEY. This dazzling barrage is born of 4.5 rockets—the particular poison of a Marine Corps rocket-launching battery in Korea. They have been credited time and again with successfully preparing the way for the advance of our troops. As they continue to light the Korean sky by night, latest reports from the battlefield indicate a lull in the ground fighting. An allied tank infantry patrol seeking to probe ahead north-east of Kumsong was driven back—and on the western front the Eighth Army reported doing likewise to a Communist thrust. Not in Korea, but at White Sands, N. Mex., our scientists release giant missiles into the sky to unfathom secrets that will give our troops the best rockets that American brains can provide. One little-publicized phase of this important rocket research is research into the nature of the upper atmosphere. To tell you of its significance to all of us, we point our cameras now at one of the Signal Corps' top electronics experts—Capt. Gernard Dean.

Capt. GERNARD DEAN This week a German V-2 rocket prepared by the University of Michigan under a Signal Corps contract and two Aerobee sounding rockets instrumented by the Signal Corps were fired at White Sands Proving Ground, N. Mex.

Signal Corps upper atmosphere research began in 1946, with the use of the German V-2 rocket. These rockets were used for vehicles until 1948, at which time a new American-built rocket, the Aerobee, and other American rockets came into general use.

The Signal Corps program has been directed toward the complete investigation of two experiments, namely—

1. The collection of air samples above 20 miles altitude to determine whether the heavier gases diffuse downward at these altitudes.

2. The measuring of air temperature above 20 miles altitude to furnish data for a complete understanding of the general circulation of the atmosphere and additional information for long-range weather forecasting.

Last week the Signal Corps prepared three rockets for flight. The first of which was a German V-2 rocket. Imagine yourself at the White Sands Proving Grounds the day before the firing. The V-2 in preparation for more than a month, has been out at the launching site for nearly a week. Final preparations and last-minute tests are now being made. The experimental equipment in the mast of this rocket will measure air temperatures from 20 miles to about 55 miles altitude. The final preparations continued throughout the entire night prior to firing which is set for 1,300 hours Monday.

Fueling begins at 1,000 hours and arrangements proceed smoothly up to the firing four. The gantry crane which is used to reach all parts of the rocket is now moved back on its tracks and the rocket stands alone, ready for firing. The firing button is pushed from within the concrete blockhouse, 400 feet away, and the rocket motor begins to burn. Burning begins slowly and then at full thrust the rocket takes off. Meanwhile, nearby at a second launching site, the first of two Aerobees rockets is being readied for flight. Unlike the German V-2, this Aerobee is fired through a launching tower about 120 feet high.

The first Aerobee is scheduled for an evening firing. The desert will be dark at firing time but the sun will be shining on the missile after take-off. Many optical tracking instruments will be trained on the rocket during its flight. The rocket is now buttoned up, fueled, and all personnel are within the blockhouse awaiting the signal. The "bird" takes off, leaving a stream of fire behind it.

The second Aerobee is placed in the tower as soon as possible after the first firing. This second launching is identical to the first Aerobee except for the fact that it is a 2,300 m. firing. Due to the darkness more reliance must be placed on radar tracking and optical tracking of the jet flame before the rocket motor burns out.

The next morning the recovery party sets out across the desert to find and return to camp the rocket bodies. On past flights, parachute recovery has been accomplished and the essential pieces of experimental equipment brought safely to earth. Ribbon-type chutes are used on these flights to avoid excessive opening shock on the parachute when the rocket is severed and the parachute ejected.

Other rocket firings are being planned for the future. Better missiles carrying new experimental equipment will be sent skyward—in order to better understand the atmos-

phere and furnish information that will help us solve other related problems of both civilian and military importance.

Mr. BRINKLEY. Just a few days ago President Truman put aside affairs of state to bestow upon two members of the Marine Corps the highest honor a grateful Nation can pay—the Congressional Medal of Honor. These two marines are with us now, but before you hear their story let us again set the stage that led up to their acts of incredible valor as circumstances set it then. The time—a year ago this month. The place—around the Chosin Reservoir. Our troops, surging north in a victorious sweep after the Inchon landing, were already facing a bitter enemy—winter with its snow and freezing cold. Suddenly and unexpectedly they found themselves facing another—the Chinese Communists enter the war, move down from Manchuria and threaten to entrap them around the Chosin. Here is pictured the situation in which the Marines found themselves. Their base at Hagaru, at the southern tip of the reservoir, was in danger of being surrounded by the Communists. Since it lay astride the only escape route for the Fifth and Seventh Marine Regiments farther north, it felt it would spell disaster for the whole corps. South of Hagaru, and along the only road out, lay the supply line from Kotari, already under attack by the Communists. This is the setting in which our two guests, standing with me here, made marine history—Maj. Carl Sitter and Maj. Reginald Myers.

In a moment more of Battle Report and a preview of next week's program—but first here is a message you will all find of interest.

The possible shape of things to come—revealed last week in the desert of Nevada. Presaging a new epoch in warfare, the Atomic Energy Commission—with 5,000 troops participating—exploded an economy-size atom bomb in the first atomic-warfare maneuver in American military history. Note the familiar mushroom cloud dissipating itself over the simulated battlefield after the bomb was dropped by plane from an estimated 1,000 feet. Thundering its presence on Frenchman's Flat, the bomb's explosion was heard 50 miles away—and the shock wave broke windows in Las Vegas, Nev. With top brass from the armed services looking on, this sixth atomic detonation in the United States in the last 2 years was used to study the effects of the blast on field installations, battle equipment, and animals. Declared Maj. Gen. William B. Kean, commander of the Third Corps, the maneuver unit: "This first step toward military tactical employment of the nuclear weapon was most successful." Thus, with the atom's smoke, do we shape the close of this week's Battle Report.

So, until we turn our cameras upon the Nation's Capital again next Sunday to report on the battle of democracy against world communism, this is David Brinkley putting a period on your sixty-second Battle Report, Washington.

He's the Same Benton

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an editorial from the Shreveport (La.) Journal.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

HE'S THE SAME BENTON

Senator BENTON, of Connecticut, who has been urging the unseating of Senator JOE MCCARTHY, of Wisconsin, one of the most outspoken national solons against the Democratic administration's softness toward subversives and Red sympathizers in our Government offices, is the same national lawmaker who suggested violent and vicious punishment of Southern States whose Senators refuse to go along with advocates of civil rights and other legislation unfairly aimed at the South.

Senator BENTON, little in the limelight until his recent fiery outbursts against some of those with congressional influence who fail to join him and his allies in despicable legislative activities, isn't selling himself or his ideas to many if any citizens except those under political control or prejudice. His provocative suggestions won't reach the proverbial first base.

The blast he takes against Senator MCCARTHY, a Republican foe, is of no particular interest in the Southland except the fact that the target of his verbal explosives is bombarding BENTON and others like him because of their sorry attitudes. But the Benton suggestion to punish the South because its senatorial representatives join the other side to protect Southern principles, traditions, and rights, is of acute interest to Southern people, as very aptly reflected by the New Orleans States in this comment about the Connecticut Senator's suggestion:

"Intimidation as a means to accomplish enactment of legislation is a concept so un-American that it should never enter the head of a lawmaker."

"But such a suggestion has come from Senator BENTON who promptly aroused the ire of some of the southern Senators."

"Presiding at a meeting of the Senate Rules Committee, BENTON denounced southern-led filibusters which have blocked votes on the so-called civil rights bills in the past, and suggested that those who support the bills 'take a long look at appropriation bills affecting the Southern States.'"

"In other words, he was suggesting that unless southern Democrats quit blocking the administration's so-called civil rights program, the Senate should practice economic discrimination against the South."

"Later Senator BENTON said he meant his remarks to be part of a listing of 'all possible approaches to getting the Senate filibuster rule changed and pushing through some civil rights legislation.'"

"No matter. This approach is typical of the brand of Fair Deal liberalism we have got to know so well. There is no room for ideas other than their own, and force, rather than logic, is their chosen weapon."

Senator BENTON and any other prejudicial lawmakers can do and say all they wish about penalizing the southern people for insisting upon their rights, but all of it will prove a waste of words, time, and effort. The genuine Democrat, who represents the type of democracy which has guided the South since the founding of the Nation, will never be frightened by political threats. And, obviously, when such threats from small fry, the southern solons with proper democracy guiding them will be bothered no more than an elephant would be disturbed by a baby mosquito's bite.

Senator BENTON, if it really is worth mentioning, reportedly has business in New York,

but his voting domicile is in Connecticut, whose former Governor, Chester Bowles, appointed him in 1948-49 to fill a senatorial vacancy. In 1950 he was elected to the current term.

Radio Broadcast of Walter Winchell

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a radio broadcast of Walter Winchell of September 23, 1951.

There being no objection, the radio broadcast was ordered to be printed in the RECORD as follows:

Mr. and Mrs. United States: to the great surprise of many Americans this week the President stated that the Republicans had no issues for 1952. The Truman administration's own record contradicts the President.

If, as Mr. Truman declared on Thursday last, we must met force with force, why did his administration spend 4 years disarming the United States. For instance in 1949, President Truman declared that a super aircraft carrier was absurd. But in 1951, the administration is frantically building two of them. In 1949 the President turned down his own Commission's request for 70 air groups and said that 42 was sufficient.

But now, 2 years later, Mr. Truman's wise men discover that 96 air groups are not enough to defend the United States of America. No Republican issues for 1952? Huh. Listen to two more.

The Truman administration's Department of Justice officially states that crime is costing the Nation billions of dollars every year. But Democratic Senators have proved that the Democratic city machines are the criminals' best allies.

The President also declared that charges of communism were Republican red herring. But his own Justice Department debunked that by convicting Alger Hiss for being a liar and the 11 top Red leaders for plotting to overthrow the United States.

Ladies and gentlemen, it is very shrewd politics for the President to declare that the Republicans have no issues for 1952, because the truth is that the great and vital issue is the Truman administration itself. From bottom to top—professional amateurs.

The Outrageous Increase of 1951 Taxes

EXTENSION OF REMARKS OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GWINN. Mr. Speaker, under leave to extend my remarks, I am including the following article:

THE OUTRAGEOUS INCREASE OF 1951 TAXES

A few days before the end of the first session of the Eighty-second Congress, it be-

came alarmed and rejected the 1951 tax bill. It refused to force single persons to pay taxes of \$542 if they earned \$3,000, and \$1,052 if they earned \$5,000, and \$2,728 if they earned \$10,000. The bill walloped a \$25,000 man with \$10,940, and if he earned a million it took \$880,000 from him.

Besides this drain of an 18-percent tax on a \$3,000 income Congress knew that the taxpayer must pay indirect taxes. He pays the corporation, excise, and other business taxes whenever he buys an automobile, food, cigarettes, and all other products. This amounts possibly to another 15 percent of his income—nearly 33 percent in direct and indirect taxes—leaving \$2,000. And of the \$2,000 left, he has only about \$1,100 purchasing power compared to 1939, because the taxing and borrowing by the Government has made our dollar worth not more than 55 cents.

When Congress takes \$3,000 from the taxpayers or borrows to pay a new Government employee \$3,000 it not only reduces what they have to spend but it inflates prices. For example, a man producing 3,000 pounds of beef quits, and goes to work for the Government. Instead of producing beef he is paid \$3,000 by the Government for which he is likely to produce nothing. With this \$3,000 of taxpayers' money he competes against the man who has only \$1,500 to spend for beef and other products. Products grow scarcer, simply because fewer producers are made than spenders.

When Government spenders, dole takers, borrowers, and subsidy beneficiaries, employees, and contractors become the haves with a lot of our tax money to spend, the rest of us become the have nots. Thus the Government haves who are mostly nonproducers of essential consumable goods, run away with the beef at \$1 a pound and the eggs at 90 cents. The have nots can only spend 55 cents for the beef, or 49 cents for eggs with their 55-cent dollars. So they go without. That is inflation with its evil effects for them. The outrageous misrepresentations made by the President that inflation is caused by greedy private citizens forcing prices up is designed to shift the blame from the administration of Government where it belongs.

Government alone creates inflation. It alone can make millions of people temporarily and unnaturally prosperous, because it alone can provide them with unearned benefits. It alone can tax and force millions of others to pay those unearned benefits. Inflation always robs Peter to pay Paul. It makes Paul feel he has more money than he ever had before—all designed to induce him to vote to support the Government that does it.

It was in reality a moral collapse that Congress faced. Congress is not supposed to rob one group and give the proceeds to another. That's what inflation does. Most Congressmen realized the absurdity and the utter dishonesty involved in raising prices by taxes and borrowing, with one hand, and pretending to stop prices rising with the other, by enacting OPS legislation. They have known all the time that the only way to reduce prices is to make more people free from dependence on Government and special privileges. They would, if left on their own responsibility, produce more beef for themselves and others. Then the pounds of beef would equal the units of dollars issued to purchase it. Then there could be no inflation.

But the new tax bill takes even more people out of production and puts more of them on Government incomes, thus increasing inflation further. The effort to control prices is made even more ridiculous.

The enormity of the fraud practiced on the people is shown by the increase in the

printing of money and the borrowing at the banks (largely Government borrowing) that has jumped from \$64,099,000,000 in 1939 to \$174,200,000,000 in June 1951. There could be, of course, no such corresponding rate of increase in production to offset this new money. If it had been possible to produce a new pound of beef and other units of production for each new dollar and credit issued, there could have been no inflation or rising prices. Instead, production of meat, eggs, dairy products, and wool increased very little.

Now we come to the most devilish reason for the Government itself to bring about inflation. That is, to collect more taxes. This year's tax receipts are running \$12,000,000,000 (yes, twelve billions) ahead of last year, due largely to Government-made inflation. If you raise prices and profits 20 percent, taxes will rise about 20 percent.

So a new increase in tax rates was not necessary at all for 1951. It will raise an additional \$5,500,000,000, or a total increase of \$17,500,000,000 more than in 1950. And still they want to raise more in 1952.

That is what Communists in government are for, viz: To raise taxes and spend them and smear the opposition.

Congress, knowing all these things, stood fast for a time against the new tax bill. But it stood fast for 2 or 3 days only. The special privilege groups that are getting the unearned benefits of these taxes with the help of a thousand lobbies in Washington, forced Congress in the first place to pass special bills appropriating money to them. They got appropriations for all manner of subsidies—houses, food, health, loans, contracts, price and rent controls, domestic relief, foreign relief, etc., etc. When Congress balked they got busy and said, "You Congressmen cannot promise money to us in return for our votes, and then fail to levy taxes to make good your promises." For example, more than a cold billion dollars had been promised for unemployment relief, even in these times of so-called prosperity. In one State 8 percent of the entire population was drawing down United States Government relief checks. Some came in Cadillacs to collect their hand-outs. They were called clients of Mr. Ewing's Social Security Department, and their names were to be kept secret so no one could discover their fraud. Here are between 2 and 3 million bought votes. Add to that 2,600,000 Government employees. Multiply that by four to get the number of votes influenced by them. Add another million multiplied by four to cover the public housing tenants who must vote in appreciation of half rent and no taxes for schooling and other municipal services. Then add the population of whole States getting subsidies for growing food. All told, more than 17,000,000 people get checks annually from all the departments of government. None of them drew these checks 20 years ago except the Government employees and veterans of World War I.

This is the extent to which our own variety of socialist government is redistributing wealth. Nor can it be stopped by chasing a few Socialists and Communists out of the Government. So long as we operate the kind of Government we now operate you can be sure Communists will help operate it. What's worse, they will continue to influence our foreign policy, make deals favoring Soviet Russia and likely keep us mixed up in wars.

The only remedy is to stop socialism and communism itself. The people must form committees to appear before the legislatures of at least 32 States, requesting them to demand of Congress, as provided in the Constitution, that it amend the Constitution

by providing a limitation on the power of Congress to tax and spend for nonmilitary costs of Government. That would save seven to ten billion dollars annually, a necessity and a reasonable possibility as shown by Senator BYRD. It is a job for the people—to restate in the Constitution what they want the Federal Government to do, and confine Congress to that. Obviously, Congress won't limit itself. The people can do it, just as they have limited the State legislatures and city councils in what they can spend. As a result, not one of them has gone Socialist. Communists are no problem there simply because they have no unlimited power to tax and spend for their purposes as they have in the Federal Government.

Congress is now without the protection which our State legislatures and city councils enjoy, by the arbitrary and automatic stoppage of spending beyond a certain percentage of assessed values, or without a vote of the people. Such an amendment is now being proposed before the Congress, as follows:

“ARTICLE —

“SECTION 1. All taxes levied and collected for nonmilitary expenditures including interest on the national debt in any one year shall not exceed 5 percent of the national income for the nearest preceding calendar year for which figures are available.

“The Congress shall define, according to accepted accounting practice, what constitutes national income.”

NOTE.—That is now two hundred and fifty billions viz: the national production from farms, mines, sea, factories, and personal services excluding Government, amounts to that.

“SEC 2 To provide for the Military Establishment in peacetimes, and to delay the costs of war, the Congress shall lay and collect special war taxes.”

NOTE.—Five percent of national income would be \$12,500,000,000. That percentage has more than covered all legitimate costs of Government from the beginning.

How To Prevent War and Stop Inflation Without Cost or Sacrifice

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WOOD of Idaho. Mr. Speaker, during the past 6½ years the Truman administration has collected and spent more taxes than we collected in all the previous years of our national existence—\$4,000,000,000 more. We are staggering under the greatest national debt in all history—more than \$256,000,000,000—and we are being rushed at breakneck speed into national bankruptcy. Why?

The President says this reckless spending is necessary to achieve peace and security in a free world. Are you satisfied with that explanation? If not, ask yourself the three following questions:

First. Is peace and security the sole objective of this mad spending spree?

Second. Have the pseudo economists of the New Deal-Fair Deal made such a

mess of our economy that they must promote war and production for war to keep our economy going?

Third. Is this all part of a diabolical international conspiracy to drain away our wealth; destroy our domestic economy; reduce our standard of life to the world level; and replace our system of government with a socialistic, totalitarian state?

AN APPEAL TO REASON

Common sense dictates that the way to prevent wars and depressions and stop inflation is to eliminate the causes. Every war is, in essence, an economic war. The underlying causes of wars and depressions, booms and busts, inflation and deflation are unsound monetary and fiscal policies of government.

These causes can be eliminated in 90 days without cost to the American taxpayers, without economic disturbances of any kind, and without sacrificing the life of a single American boy in foreign wars; merely by carrying out a legislative mandate that has been on our statute books for exactly 58 years—act of Congress, November 1, 1893, section 311, United States Code Annotated, chapters 8, 28, statute 4. This mandate provides for the establishment of a sound, honest, dependable monetary system which will maintain and protect the solvency and integrity of the people's money, the solvency and integrity of the United States, and guarantee the redemption of currency at face value, on demand.

Money is sound, honest, and dependable only when backed by and redeemable in something of a universally recognized and accepted value; and since the dawn of civilization the only two material things that have been universally recognized and accepted in exchange for goods and services, and for the redemption of paper currency, are gold and/or silver at a fixed and proper ratio, based on the relative world production of these two precious metals.

THE SCARCITY OF GOLD

The panics and depressions of 1873, 1893, 1907, 1920, and 1929, and the abandonment of redemption in 1934, proved conclusively that there is not enough gold in the world to furnish monetary reserves adequate to maintain the face value of currency and insure its redemption. The best evidence that a return to the single gold standard does not offer a solution lies in the fact that we were on the single gold standard until 1934 and that this neither prevented the 1929 depression nor provided a remedy. It was war, and war only, that brought back full employment and full production in 1941, and war and rumors of war that have kept our economy going ever since. Unless we propose to continue in a war economy until we suffer total economic collapse, we must join silver with gold at fixed and proper ratio to supply adequate redeemable monetary reserves.

CAUSE OF OUR TROUBLES

Most of our troubles of the last 18 years have stemmed from the fact that, in 1933, we adopted the Laski-Keynes-

Marxist formula of a so-called managed currency and denied the American people the right of redemption. So long as the people enjoyed the right to redeem their paper currency in gold, they had an effective brake against Government waste and extravagance and irredeemable printing-press money. Denial to the people of the right to redeem their currency has been a favorite device of dictators, from time immemorial, when they wished to embark on a spending spree.

As a consequence of this unsound monetary policy, the dollar, and all fixed-dollar-value securities, including savings, pensions, and life insurance, have lost 63 percent of their value since 1933. Prices are high because dollars are cheap, and they will continue to get higher as the dollar gets cheaper. The futility of price controls, while the dollar depreciates in value, should be apparent to anyone.

It should be evident to the most naive—which in French means dumb—that there can be neither peace nor economic stability, here or elsewhere, until we adopt sound monetary and fiscal policies, and restore redeemability to our currency. Perhaps a brief recital of what has happened to our money will be helpful.

WHAT HAS HAPPENED TO OUR MONEY

I will endeavor to show by simple arithmetic just what has happened to our money. From 1837 to 1934, 23.22 grains of gold constituted \$1, and that was the amount of gold you could demand and receive, in suitable denominations, for every dollar of currency presented at any bank. Prior to 1934 our laws required that we back our currency with a monetary reserve of 40 percent, which for more than a century and a half had been universally recognized as the minimum reserve required to maintain currencies at face value and insure redemption on demand. Thus, it became axiomatic that currency was worth two and one-half times the reserve back of it, and whenever the monetary reserves of a country dropped below 40 percent the value of its currency fell proportionately.

Since there are 480 grains in an ounce, and 23.22 grains of gold constituted a dollar for the 97 years preceding 1934, simple division shows that this fixed the price of gold at \$20.67 per ounce.

In 1934, the amount of gold constituting \$1 was reduced to 13.71 grains—a reduction of 41 percent; and, again, simple division shows that this fixed the price of gold at \$35 per ounce.

In 1945, Public Law 84 was enacted, reducing the monetary reserves from 40 to 25 percent. This caused a depreciation of the already depreciated dollar of 37½ percent, and caused prices to advance 60 percent. But because this occurred at the time price controls were eliminated, most people blame the advance in prices to the elimination of price controls rather than to the enactment of Public Law 84. As a matter of fact, if 1945 price controls had been kept in effect after the enactment of Public Law 84, every

business in the United States would have been forced into bankruptcy.

**WHY PRICE OF OUR GOLD SHOULD BE
\$56 PER OUNCE**

From 1934 until the enactment of Public Law 84 in 1945, the amount of gold constituting a dollar was 1371 grains. By reducing this 37½ percent, we find that the dollar is equivalent to 8.57 grains, and again by simple division, we find that it requires 56 of these depreciated dollars to equal in value an ounce of gold. Therefore, the price of gold should have been advanced to \$56 per ounce. This would not increase the value of gold nor further depreciate the dollar, but would merely adjust the price of gold to the already depreciated value of the dollar. Rather than wasting our time talking about devaluation of the English pound, we can bring all foreign currencies into correct parity with the dollar simply by advancing the price of our gold to \$56 per ounce. This also would have the effect of increasing our monetary reserves to 40 percent thereby preventing further depreciation of the dollar and lessening the danger of a major depression.

SUBSIDIZING IMPORTS 60 PERCENT

But instead of raising the price of our gold to \$56 per ounce, we are permitting foreign nations to buy our gold at \$35 per ounce. This overvalues foreign currencies 60 percent and has the effect of subsidizing imports 60 percent, and discounting exports 37½ percent. This also permits foreign investors to buy our choicest industrial stocks at 37½ percent discount and sell them at a 60 premium. Small wonder that the stock market is no longer a barometer of American business and that our choicest industrial stocks are listed at 60 percent or less of their real value.

REPEATING ERRORS OF 1929

When you recall that the 1929 depression was precipitated when European banks permitted their monetary reserves to fall to 21 percent, you can appreciate the inherent danger in Public Law 84 of 1945, which not only reduced our monetary reserves to 25 percent, but left the door wide open for further reduction. And, as a consequence, our dollar is worth even less than 37 percent in foreign exchange.

For example, an American \$20 gold piece will buy three times as many French francs today as can be bought with \$20 of American currency. That is why you hear about an acute shortage of dollars in Europe because anyone fortunate enough to convert foreign currencies into American dollars can make from 60 to 75 percent on the transaction.

OBJECTIVE OF INTERNATIONAL BANKERS

It is very evident that the objective of those responsible for this situation is to drain away our wealth so that we can no longer consume the major portion of our own production. Then many of our industries will be forced to seek foreign markets. So long as the American manufacturer has a good home market,

he is not interested in foreign trade. He believes in paying good wages and good prices for raw materials because the factory worker, the miner, and the farmer are his best customers.

But once the American manufacturer is forced to seek foreign markets, wages and the prices of raw materials are merely items of cost to be kept as low as possible, and he is no longer interested in a protective tariff. Then foreign goods from slave-labor countries can flow into free-trade America to pay interest on foreign bonds, and American industry becomes a more profitable investment for the international bankers.

The statement carried in the CONGRESSIONAL RECORD of July 17, 1951, titled "Why Silver Is the Magic Metal," copy of which will be sent free on request, should be read in conjunction with the above.

Those who read these statements and fail to demand enactment of a sound monetary system should stop complaining about high prices, high taxes, and the fact that their sons are being drafted to fight more foreign wars.

**Resolution of Connecticut Polish Army
Veterans Association of America**

**EXTENSION OF REMARKS
OF**

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution of the Polish Army Veterans and its auxiliaries for the department of Connecticut.

There being no objection, the resolution was ordered to be printed in the RECORD as follows:

**POLISH ARMY VETERANS
ASSOCIATION OF AMERICA,
DISTRICT IV, OF CONNECTICUT,
September 26, 1951.**

The Polish Army Veterans and its auxiliaries for the department of Connecticut, in convention assembled in Derby, Conn., on the 15th and 16th of September 1951, deeply disappointed that the allied victories in World Wars I and II, toward which Polish Army Veterans and their auxiliaries gave so much, have been dissipated through the short-sightedness of the leaders of the democratic nations, and regretting in particular, as Americans of Polish origin, that the country of their forefathers, Poland, was tragically sacrificed on the international political arena to gratify the greatest enemy of democracy, Soviet Russia, and regretting the tragic retreat before the Russians at Yalta and Tehran, which have today brought world-wide chaos and the uncertainty of survival before the onslaught of Russian imperialism, diabolically concealed beneath the mantle of international communism, and being cognizant that these errors and their tragic consequences have brought the world to the brink of disaster and being cognizant that action is imperative have, therefore, resolved, as follows:

1. That the United States reject as invalid the agreements at Yalta and Tehran, since these agreements lost freedom for many nations, including Poland.

2. That the United States and its democratic allies be put into a state of military readiness with utmost speed, so that their combined forces shall be ready to meet the military might of Russia, which has been readied from the day of the termination of World War II.

3. That the greatest possible financial and military aid be given Spain, Italy, and Turkey, inasmuch as these nations hold key positions in the struggle with communism.

4. That the United States immediately withdraw its recognition of the present Polish Government in Poland, because it does not represent the Polish people, but is merely the obedient pawn of Stalin, yielding to his every wish and demand.

5. That the Polish Nation be given the hope of freedom and, therefore, a greater will to resist, through the recognition by the United States of the Polish Government in Exile as the only true and legal Government of Poland, which it already is, in fact, in the eyes of Polish people.

6. That the Katyn murders and its perpetrators be brought to full light and that the responsible criminals be made to answer for the greatest single crime in world history.

WALTER MAZNICKI,

Chairman of Resolution Committee.

**Address by Telford Taylor, Administrator,
Small Defense Plants Administration**

**EXTENSION OF REMARKS
OF**

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. PATMAN. Mr. Speaker, Mr. Telford Taylor, Administrator of the new Small Defense Plants Administration, expressed the new agency's aims in an excellent speech before Smaller Business of America, Inc., in Cleveland, Ohio. Under unanimous consent, I include his address in the RECORD:

I am grateful indeed for the opportunity to be a part of this occasion and, more than that, to meet and confer with so many distinguished leaders of Cleveland business. Here, in the heart of the eastern industrial region, is a good vantage point from which to survey some of the economic problems with which the entire country, and small business in particular, is confronted.

The Small Defense Plants Administration is barely 3 weeks old, and this is only the second time that I have been able to leave Washington and visit important centers of production and procurement. I have found both of these trips extremely fruitful and hope to make many more to other parts of the country. The problems of small business are Nation-wide, and they cannot be fully understood, or dealt with, by staying behind a desk in Washington.

Now, the international situation that has given rise to these problems is familiar to all of you. Six years ago we won a decisive military victory over the Nazi-Fascist forces that threatened us and our way of life. That victory was achieved in combination with the power of the Russian and Chinese peoples, among others. When the victory

was achieved, we all looked forward to and hoped for an era of international peace and good will, and the establishment of a genuine, world-wide community of nations.

Events have rapidly proved that this is still a goal to be ardently sought, but not an immediate prospect. The Russian people are enslaved, and the Chinese flushed and confused by a wave of nationalism and revolution which has swept them into the Russian orbit. Our trusted allies of wartime are still in an early stage of economic and social convalescence. The era of good will seems far distant; for nearly a year and a half we have been engaged in Korea, and whether we call it police action or war, it is still a bitter and mortal battle.

We still cling to the hope and bend our efforts to lay the basis for lasting peace, but no man can be sure that the specter of a world war may not emerge into horrible reality, even within the life expectancy of the aged. We cherish our liberties, we revolt at the thought of becoming a garrison state, and we owe it to ourselves and our children to preserve the material and spiritual blessings of peace, restless though that peace may be. All-out mobilization for war is an ugly and destructive thing at best, so we have undertaken to pull the throttle only part way out. And, as a result, we grapple with the dislocations of a partial mobilization, without the all-consuming and simplifying solutions to the terrible equation of an all-out war.

No wonder, then, that our economy is suffering from the troubles and frustrations of split personality. And these consequences are coming down upon the head of small business with especial weight. We are living in the era of the tank, the airplane, the atomic bomb, and the guided missile. Military procurement of the means and weapons of war comes in ever more enormous and complicated bites. The demand for aluminum, copper, and steel for military purposes pinches the civilian economy acutely. The big companies swallow up both the Government contracts and the material where-withal of civilian production.

The trend is unmistakable, and there is no sign yet of a reversal. On the contrary, things are apparently going to be worse before they are better. We have just last week heard General Bradley tell us that the air program must be stepped up if the battle for defense is to be won. It seems plain that tanks and planes are going to be bigger and faster and more numerous than ever, and the impulse of procurement officers to seek out the big manufacturer, with regiments of engineers and acres of plant, is going to be stronger than ever.

GENERAL OBSERVATIONS

In this connection, I would like to make two general observations to clarify the attitude with which I am approaching my new duties as Administrator of the Small Defense Plants Administration. There is nothing in the Defense Production Act, under which this agency is constituted, that says that big business is a bad thing. I have stated previously, and want to reiterate, that there is to be no "holy war" of little business against big business. In a capitalist free enterprise economy, we certainly need big business and the wonderful things that research laboratories and assembly lines can accomplish.

Therefore, and this brings me to my second general observation, it is understandable that many procurement officers and officials charged with the allocation of scarce materials tend to think first about the big companies with nationally known names. But the fact that this tendency is under-

standable does not make it right to think about them preferentially or to the exclusion of small business from its rightful share in our economy as a whole.

It is wholly understandable and natural that your 16-year-old son may want to drive the family automobile at 60 miles an hour down the main street of the town, but that does not make it a safe or sane thing for him to do. We must have women and babies and even pedestrians, or soon we will have no 16-year-old boys.

And, in similar fashion, our national economic welfare depends on the preservation of a balanced and varied economic structure. If small business is allowed to wither on the vine, before very long there will be no big business. It is the mission of the Small Defense Plants Administration, as I envisage it, to insure that our program of partial mobilization does not lead to such disastrous consequences, as well as to foster and enlarge the contribution that small business can make to the defense program.

Now, it would be idle to pretend that it is going to be an easy and simple matter to accomplish the objectives to which SDPA is dedicated, or that there are not substantial difficulties and obstacles in our path. One very real difficulty is that we have gotten off to a very late start. The Korean war has been going on for nearly a year and a half, and many of the basic decisions with respect to the mobilization program were made many months ago. The SDPA is faced with a procurement and allocation pattern which, to a large degree, has already been set. For the accomplishment of our purposes, it would have been much better if the agency had been in existence during the past year, while the defense program was taking shape.

Then, too, this late start means that we have come into existence at a moment when a very acute period is just around the corner. Only a few weeks ago NPA Administrator Manley Fleischmann said that, so far as the first and second quarters of next year are concerned, the outlook is, to use his word, "dismal." He went further, and told a group of Senators and Congressmen, members of the Small Business Committees and Banking and Currency Committees of both Houses, that: "The cuts that we have made will mean that there will be localized unemployment, loss of profits to many manufacturers of nonessential civilian goods, and the actual closing down of plants which cannot operate on the limited supplies of aluminum, copper, and steel which will be made available to them. We have hoped to hold such unhappy developments to a minimum, but there is no dodging the fact that many will be hurt." The SDPA comes face to face with these acute shortages when the agency is still a newborn infant, and wrestling with basic problems of organization and staffing.

Finally, the immediate financial resources of the SDPA are very limited. The last appropriation act traveled most of the way through Congress before the agency came into existence. Indeed, I took the oath of office only the day before Congress adjourned. As a result, the SDPA has only a small interim appropriation of \$350,000 for administrative expenses, which must see us through until, at the next session, Congress again has an opportunity to consider the question of enlarging our budget. In the meantime, we will be limited to a monthly payroll of not much more than \$60,000.

NO DEFEATISM IN SDPA ATTITUDE

I have mentioned these obstacles not by way of criticism, either of Congress or the executive branch, but only so that you will understand what we are up against. Whether our financial resources are large or

small, the mere creation of a new Government agency is not going to solve the problems of small business. And, having mentioned the difficulties, I now want to make it unmistakably clear that they do not lead to any defeatism in my own thinking or in the attitude with which the SDPA will seek to accomplish its mission. In no wise do we accept the bland assumption that high mortality rates among small businesses are a necessary concomitant of the defense effort. Any such assumption is antithetical to the national welfare. Ways and means must be found to keep business failures and closings to a minimum, not only for economic reasons, but so that these resources will not be lost to the Nation, and will continue to provide the basis for further expansion.

Accordingly, the fact that the SDPA will, at least at the outset, be a very small agency in terms of staff and budget, does not mean that we are going to fall back on a philosophy of inaction while waiting for reinforcements. It does mean, however, that we must select very carefully those areas of action in which we can be most immediately effective with a small but determined staff. We cannot afford to spread ourselves all over the lot and fritter away our energies and slender resources. The situation calls for a concentration of effort in carefully selected directions.

Now, the statute (section 714 of the Defense Production Act as amended) under which the SDPA operates contains a great many paragraphs and clauses and a long series of functions and powers. I do not think that there is any need to go through it with you section by section. In general, it may be said that our activities under the statute fall in four major spheres. These are credit, the allocation of scarce materials, Government procurement, and information.

In the credit field, our statute contains a new authorization to the Reconstruction Finance Corporation to make loans and advances to small business concerns for a wide variety of purposes. The SDPA is empowered to recommend such loans to the Reconstruction Finance Corporation and a fund of \$100,000,000 is set aside from which loans can be made.

LOAN PROCEDURE WITH RFC

I have already met with Mr. Symington, the Administrator of the Reconstruction Finance Corporation, to lay the basis for the making of these loans. The staff of the SDPA has been in almost constant conference with the staff of the RFC to work out the procedural details, and in the very near future we hope to announce the consummation of a practicable working agreement so that these funds will be available for loans to small business concerns upon the basis of properly supported applications. It is my earnest hope that the procedure for obtaining such loans will be simple and expeditious, and will prove of real benefit to small business.

In the credit field, another problem has been repeatedly called to our attention for which we hope we can provide a speedy solution. In the letting of subcontracts to small businesses, many large prime contractors have been insisting upon a general right of set-off against payments to the subcontractors. This has proved a serious obstacle when subcontractors have endeavored to assign their subcontracts as collateral for bank loans. Mr. Symington and I both feel that this practice is a real obstacle to the performance of defense contracts by small business concerns, and have called this situation to the attention of the Government contracting agencies. We certainly hope that

the prime contractors will speedily abandon this practice voluntarily; if not, governmental action may be called for.

Turning to the field of procurement, the statute empowers the SDPA to enter into contracts with the procurement agencies of other Government departments, and to arrange for the performance of these contracts by letting out subcontracts to small business concerns. A revolving fund of \$50,000,000 is authorized to support these contracts, but this fund has not yet been appropriated by the Congress, and, therefore, we will not be able to take action of this type for the time being.

SPREADING OF CONTRACTS

On the other hand, there are several other things that can be done now to spread both prime contracts and subcontracts among small business concerns. As Senator Sparkman brought out in his talk here in Cleveland yesterday, the trend toward concentration of prime contracts among a relatively small circle of large manufacturing companies has not yet been checked. Munitions Board figures show that dollar volume purchases from small firms in the 1950 fiscal year amounted to 24.5 percent of the total. In 1951 dollar volume purchases from small firms amounted to 21 percent. The latest figures released by the Munitions Board, giving the statistics for the month of July, reveal that only 16 percent of dollar volume of prime contracts went to companies employing fewer than 500 employees.

Now, as I stated earlier, this concentration of prime contracts in the hands of big companies is, in part, a natural result of the character of the defense program. Heavy implements of war, such as tanks and airplanes, do not lend themselves to small scale production as readily as uniforms and rifles and C-rations. But this factor makes it all the more important that compensatory procurement policies be followed with respect to products which small business is equipped to provide. It is not the fault of small business that the military needs of the times tend to concentrate in the big concerns. It will be the fault and the misfortune of the Nation as a whole if action is not taken to prevent this concentration from working a dislocation which would be harmful and, perhaps, fatal to the national economy.

Then, too, these large contracts for heavy equipment offer extensive opportunities for the participation of small business through subcontracts. The SDPA plans to lay great stress on this aspect of the procurement problem. I have said that there is to be no declaration of war against big business. This presupposes that big business will take a farsighted and enlightened attitude, and will cooperate with the Government in distributing subcontracts as widely as possible among small business concerns. And it is in this field that the informational powers of the SDPA can be exercised to great advantage. There is a startling lack of precise information about the extent to which small business is participating in Government procurement through subcontracts, and about the methods and practices which big business is following in distributing subcontracts. It will be the earnest intention of SDPA to throw some light into this obscure situation.

There are many other ways in which the spreading of both prime and subcontracts can be promoted. The establishment of production pools of small plant facilities is a good example. During World War II, some 250 such pools received governmental clearance. They included more than 2,000 companies, employing about 140,000 workers,

and it has been estimated that they obtained over \$600,000,000 in Government contracts. At the present time, however, only five such pools have been certified by the Government and, so far as I am informed, not a single prime contract has as yet been awarded to any of the five. Time does not permit me to elaborate on this important branch of our future activities, nor to cover other problems in the procurement field with which we will be dealing.

MATERIALS ALLOCATION

The allocation of scarce materials—which, at the moment, means aluminum, copper, and steel in particular—will be an especially acute problem during the coming year. Under our basic statute, all allocation orders and priority policies must, from now on, be drawn up in consultation with the SDPA. The Governmental machinery to carry out this function is presently being devised. The SDPA will, I am sure, be given representation on the committees at the Defense Production Administration and National Production Authority, where the basic policies and directives with respect to the allocation of materials are evolved, and will present and support the legitimate claims of small business with all the vigor at its command.

To discharge all these and other functions effectively, the SDPA is going to need the advice and support of small business all over the country. Furthermore, while much can be done to aid the small-business man in Washington, I am confident that much more can be done in the major production and procurement centers throughout the country. For the time being, our budget will permit the establishment of only a very limited field organization. We cannot afford large regional offices or very many offices. A skeletal field organization is, however, vital, to keep us in touch with what is going on throughout the country, and to give small-business concerns a point of contact and assistance so that they will not have to run to Washington with all their problems. We want to be on the spot to help, and I have had many valuable suggestions from your association with respect to decentralization and regional representation.

In conclusion, I want to lay at rest the notion that it is the purpose of the new SDPA to obstruct or delay the defense program. On the contrary, its purpose is to support and strengthen defense production by expanding its resources and giving wider scope and fuller opportunity for the contribution of ideas and products that small business can make. By this very process, we can also insure that the strains and stresses of defense production do not work a fundamental dislocation of our economic structure, and throw it out of balance in a way that would soon be harmful to the defense program itself, and ultimately fatal to the national welfare.

The purposes of the Small Defense Plants Administration, are, therefore, not only in line with but an integral part of our political and economic tradition. They are highly conservative, in the best and most precise meaning of that much-abused word.

I am confident, therefore, that small-business men all over the country will welcome the new agency and support its purposes. I want to thank all of you for the invaluable advice and encouragement which you have already given, no less than for the courtesy and hospitality with which I have been received here in Cleveland.

I am sure that a relationship of this sort will go far to insure the success of our undertaking, and will benefit not only small business but the Nation as a whole.

Dedication of Memorial to the Memory of World War II Veterans at Nahant, Mass.

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at the dedication of a memorial to World War II veterans, Nahant, Mass.:

Fellow Americans, whenever I visit a cemetery, my attention is drawn to the brave little flags that flutter in the breeze over the graves of our hero dead.

There are not many of these distinguished markers.

During life's journey, only a few are fit enough to be called upon for such devotion and sacrifice.

You and I work to support ourselves, as we must. Perhaps we labor to raise a family and to provide them with the advantages that we did not have. The only reward we ask for is to see them become a credit to themselves and to their fellowmen. And then, sooner or later, we are called from our earthly cares to sleep, like the silent ones in this sanctuary of the dead, whose spirits have become one with their Creator.

This is the pattern of life for most of us.

But what of the few who lived and died not for some personal goal, not for their families, but for all of us?

What gave these young men the faith and the courage to liberate themselves from the narrow claims of self and give up their lives in defense of the many they did not know?

I always think of this as I bow my head before the little flag over the grave of a man who died in action.

The answer does not come easily.

You and I try to imagine what we would have done in their situation. War is often waged with long-range weapons, of such velocity and destructive power, that one cannot see the enemy. Before this vast, impersonal terror, would we be able to conquer our own fears, to help and protect the men to the right and to the left of us?

Not having gone through this agony, we do not know how we would have met it.

We stand before their graves and wonder, striving to learn second-hand from their experiences.

Because we the living need their belief and their firm purpose so that we will face up to the unseen problems of our time for which there are no easy solutions.

There is no greater fear nor challenge than that of the unknown. Men and women of character do not run away from it. By going forward they make the unknown become known, and in so doing they conquer it and themselves.

A child cannot cling forever to the apron strings of its mother for then it would never grow up.

The early American pioneers did not turn back from the savage wilderness to the comforts they had left behind. They pushed ahead, fighting and overcoming great odds, finding fulfillment by using and developing their God-given abilities.

It was the same with these gallant men of Nahant who dared to live and die courageously.

In one way, we mourn their passing because they were too young to die. They wanted love and laughter and meaningful work just as you and I. We miss the contributions they would have made to the larger life of family, community, and Nation. But in another sense they accomplished more in the dedication of their youth than many others whose span of years on this earth is long, if nothing more.

They could have taken the easiest way and in saving themselves have lost the war.

Then you and I would have been secure in the grip of tyrants who would rule us with an iron hand.

The security of faceless people, the security of the living dead

You and I want food, clothing, shelter, and more of the creature comforts of life, but we want the opportunity to earn them on our own with no strings attached. By working for them in self-respect and respecting our fellowmen. Not by transferring this responsibility to an all-powerful government that will demand our minds and souls in exchange. Not by falling for the "father-knows-best" lullaby that is the theme of communism and that would, if it could, transform this world into a human zoo, fed and sheltered and put through its paces at the crack of the whip and the gun.

Only as free men and women—mature and responsible men and women compromising our differences by voluntary methods—can life have peace, progress, and dignity.

The Americans who gave up their lives in World War II fought for this chance against the resurgent barbarism that in the name of order would smother mankind in ignorance and regimentation.

They won this chance for us at great cost. The chance, not the guaranty.

What we do with this opportunity from now on is the test of our ability as a free people.

The men who rest beneath this green sod gave all. Their younger brothers are also giving their life's blood in Korea at this moment.

What are we being asked to give? Only a little more effort and a little more money, both trifling compared with their supreme sacrifice. In fact, it is unworthy to make a comparison in these terms.

We can, however, try to match their unwavering faith.

By dedicating ourselves to the practice of truth, honesty, and justice, we shall not only become better men and women, but we shall help our Government to exemplify those qualities that shall win world-wide cooperation in the effort to establish an honorable and lasting peace.

Military strength and economic strength—these we must have to protect us on our journey into the uncertain future, threatened as we are by cunning and dangerous foes.

But it is our faith that will see us through.

It is not a faith of one sect, or race, or political party, but one that believes in the dignity of Man.

No iron curtain and no twisting propaganda can forever stop its message of hope and mutual confidence from reaching all peoples. By showing to the world the better life enjoyed by those who benefit from freedom, and by offering to help the downtrodden masses in other areas of the globe to share in the spiritual and material blessings of liberty, we shall break the barriers of fear and hate and envy that divide mankind.

The men of Nahant who fought and died in World War II, were Americans first, but I believe that they also had this greater goal in mind.

So far, the genius of freedom as released in the United States has concentrated upon the development of material abundance.

Now we have the opportunity—yes, and the responsibility—to bring to others the creative secret that we have discovered for their own emancipation and for the development of a world-wide civilization.

On the front face of this memorial are the following words, etched in lasting Vermont granite:

"The citizens of Nahant in grateful memory here inscribe the names of those who come not back again."

They are gone in the flesh, but into our hands their torch has passed—lighting the way toward the better world that we must build—to vindicate their courage and devotion.

Senator McCarthy

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Walter Johnson in the Country Lawyer column of the Northumberland Echo, Heathsville, Va.

There being no objection, the article was ordered to be printed in the RECORD as follows:

COUNTRY LAWYER

(By Walter Johnson)

There is much ado about what is being done by Senator JOE MCCARTHY, of Wisconsin. For long he has been demanding a clean-up in the Department of State. As a result of his demands made on the Senate floor he has been the subject of most bitter denunciation. Government officials and the liberal writers and commentators are throwing punches at MCCARTHY. Many others join in because they have not thought the matter through and they repeat what seems to them to sound good.

It is argued that MCCARTHY has proved nothing and to this it must be said that there has been no opportunity to prove anything. The Tydings committee of the Senate was charged with the duty of investigating but it turned out to be a whitewash entitled to no credit. Records in the executive branch are kept secret from Congress by order of the President.

It is also argued that Senator MCCARTHY is abusing the privilege of the Senate. The founding fathers wisely provided in the Federal Constitution for freedom of Congress by stipulating that remarks in Congress cannot be questioned elsewhere. It is hard to understand how demands that only real loyal Americans be employed in responsible public position is an abuse of privilege. Even if it were there are 95 other Senators who have the same privilege and who may well rise to debate with Senator MCCARTHY.

The fury of the attack on Senator MCCARTHY would seem to indicate that he is on the right track. It is the same fury that was directed at Congressman Martin Dies, of

Texas, some years ago when he was exposing communism. Dies was chairman of the House Committee on Un-American Activities. When he and his associates started exposing the monster he became subject to the most violent attacks. This was so furious that he had to devote his entire attention of defending himself and this had the effect of substantially halting the work.

Dies, a Democrat, was one of the most courageous men ever to sit in Congress. Eventually his health was broken by overwork and he was driven from Congress. But he had got the work so well started that others have been able to carry on.

There are few thinking people who can conclude that our present very difficult situation was brought about by just plain bungling. It just couldn't happen that way. Even with the greatest lack of intelligence there would, with patriotic honesty, be a reasonable number of steps in the right direction. The record shows otherwise.

Despite what may be said the work of Senator MCCARTHY is of tremendous advantage to the people. The Senator is on the firing line. He is drawing the fire to himself. In so doing he has created a situation under which the committees of Congress are left comparatively free to proceed with their work quietly and efficiently. This is in sharp departure from the time when Dies had to do the work and defend himself, too.

Only recently President Truman, speaking at dedication of an American Legion office building in Washington, took occasion to level a lot of names at persons who challenge communism in government. He insisted that there are no Communists in government. In comment on the President's talk Democrat Senator MCCARRAN, of Nevada, said "There are none so blind as those who will not see."

We are caught in a situation which demands that only real Americans be in our State Department. Not only should they be real Americans but they should be thought to be real Americans. They, like Caesar's wife, should be above suspicion. When our boys are dying by the thousands in combat with communism there can be no excuse for even a taint of communism in our Government.

If our President is so blind he will not see, then it is up to our chosen representatives in Congress assembled to do whatever is necessary in protection of our people. We may well be thankful that at this time we do have at least some men of vision and courage in the halls of Congress.

Could Eisenhower Win?

EXTENSION OF REMARKS

OF

HON. RALPH W. GWINN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. GWINN. Mr. Speaker, under general leave to extend my remarks, I include an article by Lawrence R. Brown: [From the Freeman of September 24, 1951]

COULD EISENHOWER WIN?

(By Lawrence R. Brown)

(Can Eisenhower win an election on "glamour"? Lawrence Brown thinks not. In this article he relates the Eisenhower boom to

the Republican dilemma as regards the basic issue of national survival.)

The maneuvers to capture the Republican nomination for Eisenhower are reminiscent of those that so disastrously captured it for Willkie. There is the same synthetic publicity accepted as evidence of mass popularity, the same approval by the liberal and forward-looking elements of the Republican Party—that is, by the eastern suburbs—the same slightly craven despair of the professional politician who wants to win with anybody and accepts a candidate's own publicity as evidence of his political strength.

There is even a faint resemblance between the men as individuals, the same air of boyish masculinity, the same public doubt concerning their understanding of political realities, the same narrow competence inflated out of all proportion by public misunderstanding of their real responsibilities. Despite their outward air of craggy, individual strength both men have owed their fame to others. Willkie to the Wall Street group which made him a prominent lawyer, Eisenhower to the leftist faction of the Roosevelt administration which gave him his stars and his commands.

There is, however, a deeper similarity in the two candidacies. Both represent the efforts of the same faction of the Republican Party to cooperate with the foreign policy of the Democratic administration. The backers are men who profess objection to some of the domestic policies of the administration but approve its foreign policy. Their public plea, of course, is that only an internationalist and forward-looking candidate can win the election. Privately, they argue that the Republicans must nominate a popular figure, a man with glamour. The substance of their view, however, is their unwillingness to conduct a campaign on any issue at all.

They know that to exclude foreign affairs would be to exclude all real issues and merely replay 1910, 1944, and 1948. Hence their plea for a candidate with glamour. Willkie was supposed to have it. Eisenhower is said to have it. With this quality, it is argued, a candidate can get votes on his personality, not his clarity of purpose or understanding of the crisis in which his country finds itself. But the trouble with glamour is that though it may lead to popularity, which is only a fancy name for favorable publicity, it does not win elections.

Eisenhower, like Willkie, would be a natural candidate for the Democrats, but again that position has been preempted. Even more than Willkie, he is one of those candidates whose professional support is from people who are for him because they think some other people are for him. You meet many of the first, but few of the second. It might seem that so synthetic a candidacy would collapse after a little sober analysis by the professional Republican leaders. To envisage the kind of campaign Eisenhower could wage against Truman at once exposes its absurdity. Why should anybody vote for the obedient subordinate and reject his responsible superior?

HOW CAN EISENHOWER ATTACK?

Wherein can Eisenhower attack the Democratic administration? For those policies which he himself executed without a murmur? Obviously, he cannot mention foreign policy beyond the vague cooperative generalities of Willkie. Can he campaign on domestic policies only? Hardly with success. First, he is marked as a man with no experience in domestic matters. Secondly, there is no domestic question that does not promptly bring in foreign questions. Taxes, the draft, Government spending, labor pol-

icy; none of these can be separated from the foreign crises that have sometimes been the cause and always the excuse for more than a decade of domestic issues. No candidate committed to the foreign policy of the Democratic administration can do more than be petulant about domestic questions. He would have raised the same vast sums for the same foreign purposes, but somehow he would have made the taxes lighter. He would have drafted and controlled the economy for the same objectives as his opponent, but he would have done it better. It is not difficult to see who would win the American voters in that kind of campaign.

It might be supposed that the impossibility of winning with Eisenhower would gradually dampen the ardor of his more practical backers; but it almost certainly will not, for the very good reason that to win is only their secondary objective. Their primary objective, as in '40, is to continue the Democratic foreign policy. If Eisenhower can win, that will be fine. If he cannot, he will have accomplished what is to them his principal function: the occupancy of the Republican presidential nomination to be sure that no opponent of the Democratic foreign policy gets it.

This campaign within a campaign needs more attention than it gets. Its object is to prevent foreign policy from becoming an issue, and the Republican candidacy of Eisenhower is merely the certain insurance of success.

To suggest that the fate of the United States—its continuance as an independent nation or its submergence under Soviet conspiracy and ultimate conquest—hinges upon the presidential election of '52 is to evoke undesired echoes of nineteenth-century campaign oratory. It is curious that in the past, when no election result could have touched the survival of the Nation, it was the style to say that it could, while today with the Soviet colossus bestriding the earth, fashion decrees that this fact must be considered irrelevant to an American political campaign.

This is the substance of the campaign for Eisenhower. It is also the accepted view of many eastern Republicans and, for entirely different reasons, of many of the one-time isolationists of the Middle West. It is also the view of most of the press and the radio. In this view it must be assumed that both parties are equally committed to defense of the United States against Soviet attack, equally unanimous in this commitment and equally willing to employ what seems from moment to moment the best strategy of defense.

DEMOCRATS AGAINST AMERICA

The trouble with this view—which is the substance of the bipartisan foreign policy—is that the rise of the Soviet Empire cannot be separated from domestic American politics, because that empire was created not by its own might but by American domestic politics. Soviet world power did not just happen, nor could the Soviet Government have achieved it by its own efforts. That empire is the creation of the faction that for years has steadily increased in power within the Democratic Party. Despite the administration's verbal attacks on Communist aggression and its childish prosecutions of the inconsequential riffraff of the official Communist Party, this faction is still able to protect its key men in the Government and to influence the major lines of American foreign policy.

These are the men who kept British and American armies out of Eastern Germany and the Danube Basin, not as the most expeditious way of defeating Germany but in

order to give these lands to the Russians. These are the men who used lend-lease and UNRRA to increase Russia's postwar military potential. These are the men who turned over Asia to the Soviet Empire preliminary at Yalta and finally with Marshall's arms-embargo against the Chinese Nationalists. These are the men who have blocked every attempt to remove Soviet agents from key policy positions in the Government. These are the men who always oppose Communist aggression in speeches and always aid it with such of the political power of the United States as they can discreetly use for that purpose. These are the men who with another 4 years of power safely in their grasp can accomplish the final destruction of the United States before an irresistible Soviet World Empire.

The fact that the Democratic Party as a whole never had such purpose is without bearing. Within the pro-Soviet faction there were enough men, powerfully enough placed in the Government and the Democratic Party, to manage American policy in such a way that the Soviet Empire grew to be the mighty power they desired it to become. They may have thought they were serving world peace, or idealism, or the welfare of humanity, or that they were merely promoting their own political or military careers by working harmoniously with an obviously powerful element in the Roosevelt administration. Whatever their motive, they created the Soviet Empire and then disarmed the United States.

These are the facts, and any difficulty in understanding the motive of such men does not change them. It is not the motives of a prominent man of today but the commitments of an obscure, ambitious careerist of 20 years ago that are decisive. These men still control the dominant faction of the Democratic Party in all questions concerning Russia, and since the President appears to be their intellectual and moral prisoner, there is no possibility of loyal Democrats regaining control of their party.

True, the country does not know this; therefore, foreign policy seems a troublesome issue to many short-sighted Republicans who themselves have rarely thought through the process by which the United States became a groveling suppliant to Chinese and Korean agents of the Soviet empire. True, the people as a whole know only that Russia has become an immense power and that we have become weak; that ever since 1943 the Soviet empire, has grown constantly stronger and more threatening. But they also know that everything that brings politics into their daily lives—high prices, the draft, Government controls, the Korean casualties, high taxes—in one way or another always comes back to the power and menace of this immense empire and the wordy but altogether ineffective counteractions of the administration. All they know, in essence, is that something is terribly, dangerously wrong.

The problem has not yet the status of a political issue because everyone who raises it is treated as a sorehead, a publicity seeker. It is not a party issue, and until it becomes one the evidence will be rarely printed and more rarely considered. But once it becomes a party issue, the overwhelming evidence placed against the public certainly that it is not right for us to be shamefully weak and the Russians dangerously strong will make it the most powerful political issue in many generations of American politics. Nor can there be any serious doubt about the way the American public would vote on that issue.

From the mere view of party advantage the question, therefore, arises why the Republican Party does not set to work to build

this issue—the betrayal of American interests to the Soviet empire—into the central theme of its 1952 campaign. Surely, say the naive apologists for the administration, if the facts were so damning, the Republican Party would not leave this field to the scattered efforts of a few Senators and Representatives. These apologists overlook the basic fact that in the realities of American politics there is no Republican Party, and until there is a nominee for President whom self-styled Republicans must either repudiate or support, there will be none. Until then, nothing can be a party issue.

REPUBLICANS AGAINST THEMSELVES

There are also two major factions within the Republican Party, the eastern internationalists and the one-time isolationists of the Middle West. That fact explains the reluctance of most prominent Republican politicians to force the issue of foreign policy into the election of '52.

The difficulty that faces the one-time isolationists in raising this issue is not so grave as that which inhibits the eastern Republicans, but it is still a difficulty. A serious examination of the administration's pro-Soviet policies brings in question the entire policy of the United States in the recent war and even to some extent in the earlier war. It raises the question of war as an instrument of national policy, and this the one-time isolationists desire to avoid. In their hearts they object to the consequences of both wars, but instead of objecting to the political goals toward which the two wars were directed—a distressing, cold-blooded issue to raise in the emotional atmosphere of a democracy—they keep silent about their real grievance and object to war as such. Foreign wars, they see, have involved the United States in manifest disasters, and it is hard for them to credit the reality of a kind of war quite outside their experience. The United States was never before in danger, and they find it difficult to sense that it now is.

So this naturally nationalistic wing of the Republican Party are left in the quagmire of sempiternity because of their fallacious conclusion that no war can be really necessary to the life and welfare of the United States. Thus they back into approximately the same position that the eastern internationalists occupy frontally and by choice: that no war of national interest should be fought because the purpose of world politics is not national welfare and survival but collective security and international peace.

But it is primarily the eastern internationalists among the Republicans who are unable to make Democratic betrayal to Russia the central issue of the 1952 campaign. These are the Republicans of the suburbs of the large eastern cities. They are by no means all the eastern Republicans, but they are the most vocal and command the most money and the best press. They are not only fearful of a strong nationalistic policy; they would deplore it as morally wrong. They have been well trained by the past literary generation to be more than a little ashamed of their own country and acutely conscious of whether they were fully abreast of the current intellectual style. Since for many years the intellectual fashion has been not only internationalist but even covertly leftist, only a Babbitt could be so hopelessly outdated as to concern himself with gaining crude practical advantages for the United States. That the survival of a state depends on the maintenance of its advantages would be too immoral a fact for them to recognize.

Naturally these Republicans demand that the party nominate a man with internationalist views, who will accept the current

clichés of the eastern press and the slick-paper magazines about collective security and international cooperation. They cannot make a real issue of the rise of the Soviet Empire. They cannot admit to themselves that this empire is an immense power and a deadly menace. To do so would not only make nonsense of their pet international theories but establish the sound political judgment of men they have been taught to despise. It simply cannot be made respectable to expose the Soviet Empire and its American apparatus for what they really are. Too many prominent intellectual, literary, and academic figures would emerge tinged with political idiocy if not with treason. Too many eastern Republican politicians would look imbecilic for sitting on the sidelines through such a gigantic betrayal. If the truth about Hiss was hard for the eastern intelligentsia to take, the truth about the entire Soviet apparatus would be staggering.

BABBITT UP TO DATE

From these basic considerations comes the formula that the Republican candidate must appeal to the "forward-looking elements," the body of liberal opinion supposed to be attached to neither party. To do this, of course, he must be an internationalist and possess that vague but indisputable quality of intellectual respectability. He must have no part of the repute of a JOE MARTIN, a MCCARTHY, or even a TART. At the moment Eisenhower best fills the bill. The political fallacy of this opinion—which the Republican Party has accepted with known results since 1940—is not in point here, but the real meaning of the definition of the desirable candidate.

What is the practical mechanism for determining what Republican candidates could fill these specifications? Who presumes to speak for the "forward-looking elements"? Manifestly the "liberal" commentators of press and radio. Their names are familiar: Elmer Davis, Lippmann, the Alsops, Doris Flesoon, Stokes, Childs, Mellett, Pearson, Eleanor Roosevelt. Beyond these there are a few technically anonymous sources of similar views, the publicly unidentified editors of the Washington Post, the New York Times, the New York Herald Tribune, and the St. Louis Post Dispatch.

This group is the generator of what is accepted as "liberal" and "internationalist" opinion. Certainly it does not come from such "reactionaries" and "enemies of the U. N." as Fulton Lewis, Pegler, Sokolsky, Lawrence, Sullivan, Frank Kent, the editors of the Washington Times-Herald, the New York News, Chicago Tribune, the Hearst and Scripps-Howard papers. Could these men establish a man as either a "liberal" or an "internationalist"?

These two lists contribute the bulk of the political comment reaching almost all those Americans directly reached by any political comment at all. The first interpretation of political events, the first character estimates of a man, reach public attention through these men and women. Roughly speaking there are no other important sources of political information available to the American people.

Now, since the second group listed above are considered completely reactionary, "liberal" political opinion is confined by simple mathematical elimination to the first group. They and they alone can speak for "liberalism" and the "forward-looking elements."

The question remains concerning intellectual respectability. Who can confer or withhold this label? Who has pictured Senator Vandenberg as a great statesman and Senator TART as muddled and reactionary? Who has unceasingly built up George Mar-

shall and unceasingly belittled Forrestal and Louis Johnson? The point is not whether these views of American public men are correct or erroneous, but that they are held by people who think of themselves as liberals and internationalists—including a large group of eastern Republicans. The further point is that these are precisely the estimates of public men which the first group of commentators has promulgated for many years.

These being the sources of liberal and internationalist public opinion, these being as a whole the group that proclaims who is and who is not intellectually respectable in American politics, it is obvious that, if the Republican Party wants a candidate who conforms to these specifications he must be a man generally acceptable to this group. Yet these political commentators have for nearly 20 years been almost the intellectual proprietors of the Democratic administration, thereby gaining a public importance that opposition could never have given them. For them to approve any Republican candidate except one foredoomed to defeat or certain to continue the same administration under a different party label would be well beyond the elastic limits of human nature. Even if there were no question of harmony of political objective, their mere livelihood and public prestige require them to work for the continuance of the same basic administration in Washington.

This is the nettle that the Republican Party must grasp or it will again flitter away its efforts in a senseless, foredoomed election. It cannot have a candidate who will be considered liberal and intellectually respectable unless, like Willkie, he is already a prisoner of the Democratic administration or, like Dewey, doomed by the boredom and indifference of the reactionary Republicans.

Furthermore, if the Republicans want a candidate who will please the liberal commentators, what sort of campaign can he wage? For what can he attack the administration that will not bring down their abuse upon him?

Probably he could talk about government corruption in minor offices—he could not mention the cost of the President's establishment: It is not liberal to get personal in politics except against the enemies of the Soviet Empire. Probably it would be permissible to deplore high taxes and government expenditures. He could argue for restricted free enterprise and deplore the march toward statism. But can such a campaign win an election? Obviously no one is going to get very angry about it one way or the other. No one is going to feel that it is really vital to cast his vote for the Republicans. Those who do not object to the present administration are not ignorant of these things. Reminding them of what they already know and discount will gain no votes.

Nor would this sort of campaign be of any use with those opposed to the administration. They, too, are a little cynical about political virtue. It is not for sins but for vast crimes that they detest this administration, even though they sense them rather than know them in precise detail. To go to people who are mortally worried for the life of their country, who are sick with dread at the prospect of the vague disasters that this administration seems to bring ever nearer; to go to these people with chatter about RFC scandals, the need for sound money and a free economy, or with opposition to creeping socialism, or any other superficial wordy campaign that would not shock the liberal commentators, is simply to confirm them in their despair.

THE WAY TO DEFEAT

For the Republican Party to refuse to pitch its whole campaign on the Russian policy of the United States is to insure its defeat. The vast growth of Soviet power is implicit in every problem disturbing Americans. Everyone is aware that the Roosevelt and Truman administrations had something to do with the growth of that power. Some think they deliberately aided its growth, knowingly contrary to the interests of the United States. Others think they honestly miscalculated, honestly blundered, but generally did the best they could. But everyone is aware that Soviet power has become immense. Everyone is aware that this power today is a danger. For the Republicans to ignore this danger, to fail to make it the central thesis of their campaign, is to ignore the only issue to which people will pay serious and consistent attention because it is the only issue they know is real. It is the only issue upon which the Republicans can get enthusiastic voters, and without them the election might as well be conceded.

A campaign on the pro-Soviet record of the Democratic administration would at once be labeled "dirty." It would be the McCarthyism so deplored, and so dreaded, by the Democratic high command and by every liberal commentator. This might seem on its face to recommend it to the Republicans—as it perhaps does to the bulk of the party—but it seems to terrify the pundits of eastern Republicanism. They are willing to win but not at that price. Yet that price may be the survival of their country.

Vultures Are After McCarthy

EXTENSION OF REMARKS
OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Pittston (Pa.) Sunday Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VULTURES ARE AFTER MCCARTHY

The vultures are after United States Senator Joe McCarthy, arch foe of Communist traitors, but I don't think they will get him. For one thing, Senator McCarthy is a combat veteran of World War II with a good record, and the veterans are with him judging by the frequent appearances he is asked to make before veterans' conventions and the enthusiasm with which he is greeted at those affairs. Also, the smear attack turned on McCarthy has not overcome the fact that he has focused the attention of the American public on the scummy Communist rats who have burrowed in the State Department and other sections of our Government. The American people like a fighter and Senator McCarthy is a fighter who has gotten under the skins of the people with soft spots in their hearts for the Stalin gangsters and their tools in this country.

A good many of the McCARTHY haters are the kind of people described in an article

in the September 1951 American Legion Magazine called Our New Privileged Class. This privileged class are the group who have been playing Joe Stalin's game in this country; either as outright Communists or as Communist-fronters or Communist supporters. They have been getting away with setting up a howl of outraged innocence if they are criticized, and their power has been such that they have often been able to destroy politically and financially, and sometimes even physically anyone who dared to cross them in their Communist devilment. Well, Senator Joe McCarthy has outsmarted them and so nothing will be left undone to destroy McCarthy. Eleanor Russell you can be sure is with the opposition to McCarthy. Eleanor, in my estimation has been one of the most dangerous promoters of this new privileged class. Senator McCarthy spoke in Wilkes-Barre several years ago and he made a good impression on people who heard him.

Fifteen Hundredth Anniversary of
Vartan

EXTENSION OF REMARKS

O

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address delivered by me:

Friends of freedom, 1,500 years is a long time to remember.

It is more than eight times the age of the United States of America.

Very, very few events in the history of this world are honored in recollection so faithfully over the centuries as the exploits of Vartan.

He must have been a remarkable man to win such immortality.

As we read the story of his life, we discover in him the rare combination of physical and spiritual strength. He had the courage of a thousand men, and his Christian faith inspired confidence in all who followed his standard.

Victory did not spoil him. Defeat never crushed him. His belief in God grew with the years of his life, helping him to overcome every pain and disappointment. He fought for the Holy Cross and for the right of his people to worship as Christians.

His faith has been handed down from generation to generation. His descendants have suffered much for their beliefs, but they have never wavered in their devotion. Their country has been occupied many times by invaders but never conquered. The tyrants have come and gone but the people remain, loyal to the religion and to their own culture. The more their faith was tested the stronger it became.

Armenians are proud of this sturdy heritage.

From the deep reservoir of their experience they draw the patience and the wisdom to outlast any man-made tyranny that may be forced upon them. They know that Stalin is mortal, that communism is worldly, and that both must inevitably waste their strength and decline before the eternal truths that they cannot destroy.

Many Armenians are captives within the Soviet Union, across from the border with Turkey. We know little of what is happening to them, but of one thing we may be sure. With all their power to close churches and imprison priests, the Communists can never stop people from silently praying for deliverance. And because they only believe in things, the Communists cannot cope with this invisible force that is greater than any power on earth. If the Reds dropped a million A-bombs, they could not erase the divine promptings of the human heart, even their own. For I suspect that there are many who call themselves Communists only for convenience, or because they must string along with a brutal regime that is in temporary control. Even in Russia, there are tens of millions ready to turn on their oppressors once they get the chance.

I am sure that the Armenians will be among the first to rebel, for they are proud of their individual manhood, and have no stomach for any system of government that would use them as machines.

It is up to us to help by getting the message of hope to all the peoples behind the iron curtain. We must follow this up by offering to share some of our knowledge and materials with them so that they will be able to improve their own lot in life once they have overthrown those who keep them in bondage.

The foreign policy of the United States today is placing too much emphasis on military alliances, supported by economic aid. These are necessary to protect ourselves, but they fall far short of the real goal.

We cannot win the confidence and support of the unhappy millions who are imprisoned in the Soviet empire, by threatening to blast them out of existence. It is useless to brag about our homes and cars and refrigerators and TV sets to people who are enslaved, starving, and restless. We must convince them that we only want peace and freedom and a world in which all can exchange goods and services for the betterment of mankind.

This is the idea that we must sell, sincerely, by showing them what they can do for themselves with initial help from us.

Just an idea?

Certainly.

But remember that every great achievement in this world began as an idea and has been animated by the idea.

Take the United States for example.

It has the highest living standards of any nation in history, maintained by a great productive system.

That, in turn, is based upon freedom of opportunity, where all the energy and skill of our people is given the chance to put ability into action.

Can you imagine what would happen to American civilization if the idea called freedom were choked off? There would be a let-down everywhere. Because people who live in the strait-jacket of a police state are afraid to put their own productive ideas to work for fear that they will be punished by getting out of line.

Here we are, a people full of ideas that we test out and change and finally put into operation, suddenly getting paralysis of the imagination at the thought of applying them to international problems.

I hope that this is only a pause in the dynamics of freedom.

As soon as Washington gets over its global stage fright and starts to beam the hope of freedom and its blessings to all the oppressed people of the world, backed up by solid offers to help them get going, we shall be on the right track at last. The counteroffensive against communism cannot be one of tanks

and planes and bombs and slaughter that would weaken and impoverish the whole world, including ourselves.

What we need is a positive type of crusade that will attract people everywhere to work for freedom by showing the practical benefits that flow from fair play.

That, fundamentally, is God's idea.

And it's time we began to practice it.

A great American President, Franklin D. Roosevelt, at the beginning of the depression when many people were discouraged, assured us that: "The only thing we have to fear is fear itself."

There is much wisdom in those words, which we of today should keep in mind.

Our young nation has weathered many storms. Now, in the prime of its manhood, it is looked to by many older and tired nations not only for military and economic leadership in defense of those values we cherish but for something far more important.

We have been successful beyond all others in controlling the forces of nature to serve our needs. But this, reflected in our material progress, has merely prepared us to meet the greatest of all problems.

Have we the faith in ourselves, the will and the democratic resourcefulness to become the builders of peace?

If we follow the design of the Divine Architect who showed us the way over 1,900 years ago we cannot fail.

The humble people all over the world are demanding it. Our Government can be the first in history to translate this human yearning into substantial fact.

That is why we remind ourselves this day of the words spoken by your countryman, Vartan, who counseled us that: "Fear is a sign of doubt; but as we have repudiated doubt long since, let fear also disappear from our hearts and minds."

We have the tools he did not have.

All we require is some of his character, the mental and moral courage to continue on, inspired by a great and creative idea.

I am sure that you, blessed with love of liberty, will help your fellow-Americans to meet the responsibility of leading the world into a happier future.

Statement of Hon. Joseph R. McCarthy, of Wisconsin, To Accompany the Time Magazine Documents

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD the following articles at this time: A letter to Mr. Henry Luce, publisher of *Time*, *Life*, and *Fortune* magazines, and documents Nos. 1, 2, 3, 4, and 5. The documents which I am inserting in the CONGRESSIONAL RECORD today conclusively prove that in the name of *Time* magazine, deliberate, degenerate lying marches on.

I want to make it clear that I do not endorse all the statements made in the enclosed material. The *Time* memorandum goes far beyond anything I have

ever stated about Gustavo Duran. For example, I deleted a sizable number of lines from the *Time* memorandum because I knew of no evidence other than hearsay to justify the claims against him therein being publicly made.

I repeat, the extent of my charges against Duran was that, first, he was regional head of SIM and second, that SIM was the Communist-controlled secret police of Spain and a counterpart of the Russian GPU.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE.

Mr. HENRY R. LUCE,

*Publisher, Time, Life, and Fortune,
Time, Life, and Fortune Building,
New York, N. Y.*

DEAR MR. LUCE: I wrote, calling your attention to the fact that a feature story carried by *Time* on JOE MCCARTHY consisted of a sizable number of deliberate misstatements. As you know, prior to the writing of that story, one of your reporters accompanied me on a speaking tour through the Middle West and West. He reported back to your office that the evidence which I gave my audiences on Duran was a convincing and damning link in the picture of Communist infiltration. His report on this point apparently led the staff of *Time*, *Life*, and *Fortune* to the conclusion that this story had to be discredited if the American people were to be lulled into believing, as *Life* recently stated, that "Communist infiltration of Government is no longer a legitimate worry." *Time*, thereupon, set about the task of discrediting the Duran story at all cost.

I call your attention to the Duran case not because it was the most flagrant example of lying in *Time*'s story, but rather because the complete and deliberate falsity of this phase of the story could be proven by information in your own files, and for the additional reason that *Time* uses the Duran case as exhibit 1 to show that MCCARTHY is a liar.

In your answer to my letter, you state: "Time, after examining the available evidence in this case, came to the conclusion that there was not sufficient documentation to support the charge that Duran was a Communist agent."

In view of this statement, I would suggest that if you will reread your own story on Gustavo Duran, you will find that it does not state that I call Duran a "Communist agent." Your story states that I made two principal allegations concerning Duran: (1) That Duran was regional head of the SIM, and (2) that the SIM was Communist-controlled. Your story then proceeds to ridicule both assertions and states: "Duran, never a Red, was definitely and clearly anti-Communist." Let us, therefore, view the written record of the Duran case from your own files.

On Thursday, March 13, 1947, Congressman O'Konski, of Wisconsin, had the following to say about Gustavo Duran (CONGRESSIONAL RECORD, volume 93, part 10, pages A1010-A1011):

"What I will say to you today is so fantastic that it will be difficult to believe. If I told you that a man born across the seas, migrated to the United States in May of 1940, and in February of 1943 was appointed Auxiliary Foreign Service Officer in our State Department at Habana, Cuba, was then stationed in Buenos Aires and finally returned to Washington, D. C., at a salary of \$8,000 per annum, as assistant to Assistant Secretary of State Spruille Braden, you would

lend me a courteous ear and not forget the entire affair. Yet, this is precisely what happened. And this is precisely how the United States was knifed out of South America to make way for the Moscow stooges."

"If he were a loyal and trusted alien this might have been fine. But this particular alien is one of the world's most notorious Communists, skilled and trained in betrayal by Moscow agents during the Spanish civil war.

"Who is this notorious Communist who rose to such heights in our State Department? Who is this notorious Communist who directed Latin American relations? Who is this notorious Communist who has driven American good will out of Latin America and substituted in its place Moscow good will? He is none other than Gustavo Duran."

Subsequent to O'Konski's speech on Duran, your staff made the following report which is still in your files:

"APRIL 25, 1947.

"To: David Hulburd.

"From: Jim Shepley, Washington—R. T. E.

"Duran and * * * —I—NA—INTL—A.

"The speech of ALVIN O'KONSKI, in the Appendix of the CONGRESSIONAL RECORD, volume 93, part 10, page A1010, is based largely on material available in the files of United States investigatory agencies. The facts—i. e., dates, names, places—are correct insofar as Latin American counter-intelligence agents have been able to confirm them. Some of the material is source-rated A 1, some of it as low as C-3.

"For better understanding of the O'Konski arguments, we background the case of Gustavo Duran.

"Duran's own story of his past, which Braden accepts, hook, line and sinker, is substantially the biography O'Konski got from the State Department. He claims that he is the scion of an old and respectable Spanish family, lived most of his early life in Madrid, studied music in Paris, joined the Spanish republican army as a buck private and worked his way up to lieutenant colonel, covering himself with glory in the defense of Valencia. He commanded a division in 1937, an army corps in 1939, escaped the fascists on March 30, 1939—with the help of United States and British consular officials, married an American national in England on December 4, 1939, etc. He is according to Cuba's Bel Tan, an extremely personable guy with a wide knowledge of music, arts, etc. He also is a shrewd manager of people.

"The other Gustavo Duran, whom O'Konski describes, is, according to Duran, two other guys. He has clung tenaciously to his story of mistaken identity. Nevertheless, when the story of the 'other Gustavo Duran' began to circulate Washington, he quietly got out of the State Department. DOS claims it was a year ago and somehow the record seems to have been falsified. Actually, he left the payroll early this year.

"Beyond the story in O'Konski's speech, the files piece together a chain of movements of Gustavo Duran which seems to have enough similarity to Duran's own version to make mistaken identity unlikely.

"The record picks up Duran in the early 1920's on arrival in Madrid from the Canaries with a friend known as Nestor.

(Nine lines deleted.)

"Sometime in this period he is reputed to have come to the attention of the GPU which became interested enough in him to test him on a few practice missions. He turns up next crossing the Spanish frontier in the early 30's as the reputed representative of Paramount pictures. Some sources

indicate that by now he was a tested and 'live' agent of the GPU. DOS bio says he was employed by Paramount in Paris in 1933 and 1934, worked for a motion picture company in Madrid in 1934 and 1936.

"The file shows him crossing into Spain, however, in 1931 as a provocateur of the Spanish Republican Revolution, working on GPU orders.

"All sources, including Duran, agree that he signed up with the Republican army after the Falangist uprising. The file reports his first act in behalf of the cause was to commandeer the convent of Siervas de Maria in the old Plaza Chamberi, and convert it to a Cheka for the detention of Falangist agitators. He is reported variously to have lived at Santa Engracia, 104 or 106, and at Hermosilla, Three. He is reported to have been a leading light in the pre-civil war days in the juvenudes comunistas y socialistas.

"In August, 1936 he had a bout with typhoid but eventually got back to his job of running the political prison. He became a fast friend of Serrano Poncela, chief of the Communist-dominated Republican political police. Prieto reports in a published document from which O'Konski quotes, that he appointed Duran chief of SIM for the Madrid zone.

"There is little doubt that Gustavo was an able soldier. He grew close to the Red Brigade commanders Lister and Modesto, who are supposed to have fought World War II as general officers of the Red Army. He was a member of the General Staff which executed the brilliant withdrawals from Talavera de la Reina, Maqueda and Toledo.

"The last days of Col. Gustavo Duran, according to the file, were spent in the Red Brigade Headquarters at Taroncon. From here, following his escape, some sources say he went to Paris, then to Moscow. The DOS bio says he went to London.

(Seventeen lines deleted)

"Both Duran and * * * are considered flatly to be MVD secret agents. Remember that counter-intelligence operations do not involve proof of assumptions. They are made on a working basis for the purposes of neutralizing foreign espionage and on occasion for disseminating false information. Please in no way associate any of the information in this research with any Federal agency."

In preparing this report, your staff had full access to the attached documents, numbered 1 through 5, from intelligence files.

In addition to the above material, I call your attention to the fact that Duran (p. 1868, Tydings hearings) himself admits his membership in SIM. Prieto, Spanish Minister of Defense, also confirms this fact (p. 1547, Tydings hearings). Prieto, as well as every other authority quoted either in your files or the Army Intelligence files, confirms the fact that SIM was Communist-controlled.

With your files, Army Intelligence, and Duran confirming the fact that he was a member of SIM, all of which was known to Time, it is difficult to find any honest reason why you should ridicule my statement to that effect and use it as the prime example of McCarthy's lying.

On page 24 of your article, you state, "There are never any circumstances which justify the reckless imputation of treason or other moral guilt to individuals in or out of office," and also "Experience proves, however, that what the anti-Communist fight needs is truth, carefully arrived at and presented with all the scrupulous regard for decency and the rights of man of which the democratic world is capable." I had hoped, Mr. Luce, that you would be willing to apply the same rules to the fight against McCarthy.

In case there is any doubt in your mind as to what honest readers, who know the facts, think about Time's article, I quote the

following telegram sent to you by William Loeb, publisher, Union Leader Corp., Manchester, N. H.:

"OCTOBER 18, 1951.

"Having respect for Time and yourself heightens the shock at your McCarthy piece which for filthy innuendo outdoes anything McCarthy's worst enemies have ever accused him of doing. McCarthy just here as this paper's guest Tuesday night which makes contrast between Time article and facts all the more vivid. You are aware that Communists' No 1 target in United States is to destroy McCarthy. Perhaps a more clever job than you realize has been done to poison your mind against a man who if not the perfect champion fights effectively for a cause that we should all be interested in. This newspaper has strong editorial opinions but confines them to the editorial page and doesn't prostitute its news columns as you have done."

Sincerely yours,

JOE MCCARTHY.

P S—If you care to do so, I shall be glad to meet with you in Washington and point out the many other deliberate and vicious misstatements made in this story.

DOCUMENT No. 1

INDALECIO PRIETO ON GUSTAVO DURAN

Indalecio Prieto, Minister for the National Defense in May 1937, encountered in his way a considerable amount of difficulties, many of which came from the tenacious infiltration of Russian Communists and their Spanish stooges into the administrative organism of the army.

Mr. Prieto gave way at last and resigned his post in the Government. The 9th of August 1938, Mr. Prieto appeared before the national committee of the Spanish Socialist Party, and made on this matter a very important report, which later was printed in Paris (Imprimerie Nouvelle-Association Ouvriere, 53 Quai de la Seine, 1939).

From this report we take the following paragraphs:

"It is true that I had some incidents with the Russians—and this part of my report might be kept secret for the time it would be convenient. The first, and perhaps the real origin of the campaign against me, arises out of the SIM.

"Certain Russian technicians proposed to me, in Valencia, the formation of a service of military investigation. I confess to have made some opposition to the project 'Why did I?' Even though I believed the service was necessary, I feared that, as it happened recently in the Direccion de Seguridad, some elements—uncontrolled by the Government—might take in hand such a delicate lever and take undue advantage of it to the prejudice of the Republic, as it happened scandalously in some cases that I need not mention. I was very much worried with the appointment of a chief of such an organization. When the question of designating local chiefs of the SIM arose, the sponsors of the project proposed to me a certain Duran for the region of Madrid. I knew that he was a Communist but, nevertheless, I appointed him. In the decree creating the SIM, which I worded myself in order to avoid the slavish way suggested in the project submitted to me, there is an article by means of which every appointment of agents of the SIM should be made exclusively by the Minister for National Defense. This was a foreseen guaranty I wanted to establish. Every agent of the SIM should be in possession of a 'carnet' with the signature, in duplicate, of the Minister himself. As soon as Duran was appointed chief of the Demarcacion del Ejercito del Centro he appointed, all by himself and without any right to do so, scores of other agents under his orders—several hundred of these were Communists, only four or five Socialists, excluding the Social-

ists provisionally appointed by the Minister of the Interior for a similar function. I found that was intolerable; and since we lacked commanding officers in the army—I noticed this lack and some deficiencies in the operations near Belchite—I ordered that all army officers who did not act in exclusively military charges, should go back to their former positions."

This was why Major Duran had to go back to his former military position. Soon afterward a Russian technician, expert on this sort of service, called on me and said:

"Question. I come to speak about the dismissal of Duran, what happened?"

"Answer. Nothing special; I am in need of commanding officers in the army and ordered him to go back to his former position."

"Question. No; you dismissed him because he has appointed some Communists as agents in Madrid."

"Answer. That is also a very good reason, since Duran has no power whatever to make such appointments."

"Question. Why couldn't he appoint agents?"

"Answer. Because, by virtue of the decree creating the S. I. M. this faculty is reserved exclusively for the minister."

I read the decree, and in presence of the evident obviousness of my assertions, my visitor added:

"Question. Duran could be entitled to make provisional appointments."

"Answer. Neither provisional nor permanent. Besides, here in Spain the provisional becomes permanent."

"Question. In any case, I come here to ask you to reinstate Major Duran as Chief of the S. I. M. in Madrid."

"Answer. I am very sorry, but I can't."

"Question. If you don't agree to the reinstatement of Duran we break all relations with you."

"Answer. I regret it, Major Duran will stay as head of a division and will not be back in the S. I. M. Your attitude is unjustified and I cannot bend to it."

"I do not consent, and my relations with the Russian technicians were, on his initiative, totally severed. After this scene in Valencia, I never saw him again."

Translated from the book titled, "How and Why I Left the Ministry of National Defense—Intrigues of the Russians in Spain."—Stenographic text of the Report given on August 9, 1938, before the National Committee of the Spanish Socialist Party, by Indalecio Prieto, Minister of the Red Government in Spain. Published in Paris, Imprimerie Nouvelle (Association Ouvriere) 53, Quai de la Seine, 1939.

THE TREASON OF STALIN—HOW THE WAR IN SPAIN CAME TO AN END

By J. Garcia Pradas, ex-director of the "CNT," of Madrid, introduction by Marcelino Garcia; edited by Cultura Proletaria, New York (1939)

Page 108) . . . "The Communist rebellion obliged us to change the commands, Lieutenant Colonel Ardid * * * though they called him very 'bolsheshevik' and notwithstanding that he did not fight against us, resulted dangerous in the command of the fortifications, and he was dismissed. * * * From the very different places all dubious people were fired. As to the Communist military commands, it resulted impossible to substitute all of them because the Communist Party of Spain held the greater part of the army in its hands. * * * Toral and Carton, for instance, remained in the command of their divisions of Extremadura. Clutat, Duran, Yglesias and others continued to stay on their posts of the Levante."

(NOTE.—Pradas and Garcia are two prominent Spanish Anarchists. They were the

chief editor of trade union newspaper CNT in Madrid and the secretary of the Anarchists Trade Unions. Both participated in the civil war on the side of so-called Republican army. When Colonel Sigismundo Casado made his putsch against Negrin in March 1939, the Anarchists supported him. The reason was their hate against the Communists who killed thousands of Anarchists at a presumed revolution in Barcelona (1937). The Communist "Tcheka" also kidnapped Andres Nin, the famous leader of the Anarchists in Barcelona, brought him to Madrid where he was tortured and finally disappeared. The Anarchists have after the civil war always attacked and criticized in a furious way the Communists whom they always call Stalinists. Neither Casado in his book, *The Last Days of the Spanish Republic*, nor Garcia Pradas in his *Treason of Stalin*, where they give a very detailed description of all the facts of their putsch against Negrin and where they mention everybody who was with them, never mention Duran as one of them. On the contrary the remark of Garcia Pradas above shows clearly that Duran was considered by him as a prominent Communist leader. He was not dismissed though his attitude was very doubtful, because Casado had not got enough reliable military people to replace Duran and the other Communist gang.)

"MEN OF LOYAL SPAIN" (HOMBRES DE LA ESPAÑA LEAL)

Aguirre, Duran, Companys, Campesino, Bergamin, del Vayo, Mijja, Robeson, Hernandez, Modesto, Candon, Pasionaria, Lister, Domingo.

By Juan Marinello and Nicolas Guillen, La Habana; Edicion "Facetas," 1942 (p. 49)

CHAT WITH THE COMMANDER DURAN

One night in Madrid I saw enter in "La Alianza de Intelectuales Antifascistas" a young man, blonde, of medium height, and distinguished manners. He wore the uniform of a commander of the people's army. The noble expression of his lively face was matched by his well-formed head. His presence was greeted by a joyful acclamation. He talked some moments to writers, painters, and people from the theater, then he sat down at the piano. In a very clean and gracious execution he started to play melodies of the old Germany. Without any pause he was playing songs from foreign countries: French, Russian, and English. Between them he played some Spanish folklores. He spent so large hours. It was 2 o'clock in the morning and the visitor without getting tired went on with his particular repertoire. He had fled from his environment into a lyrical frenzy which was growing with every moment.

When they told me the name of this musical military man I understood well his insatiable thirst. The name of Gustavo Duran told me many things. He gave me the definition of a very singular case. I know of his brave execution at the head-office division just as well as of his talent and of his artistic culture. Between the great chiefs of the Republican Army—Campesino, Lister, Modesto, Paco Galan . . . between the most beloved leaders of the work of the Spanish liberation, Duran is counted as one of the foremost. But he is distinguished from all the others by his origin, his education, his mentality. He is not as the others a man of the masses, of a humanity radically popular. He was born in a very refined atmosphere of culture, owner of a clear and perspicacious mentality. Therefore, he had since boyhood an inclination to the arts. His excellent preparation gave him wide per-

spectives. His numerous travels procured him a rare universal sense and understanding. Very Spanish with a little bit of all the different Iberian bloods—Catalan, Castellano, Canarian Islands—he exalted his particular qualities in the large years he spent in Paris. As a musician, a composer, and executive artist of pictures (movies) he never turned away from literature, nor did he lose his interest in politics. His capacities just as well as his native virtue to command took him to a delicate, difficult and magnificently refined work. The rebellion of Franco surprised him when he was directing the "doblage," that is arranging in Spanish the voices of the actors in one of the most important American movies companies. From the studio he went without delay to the barracks. In little less than 1 year this artist who did not know the difference between a brigade and a company, became the commander of a division. This man of lectures and meditation is occupying now a charge of the most grave responsibility in the Spanish hour: chief of the S. I. M. (Servicio Investigacion Militar) of the service of investigation of the people's army. He is without any doubt one of the most relevating young figures of the moment.

Very soon we became good comrades with Gustavo Duran. His visits to the Alianza became more frequent; before he sat down at the piano we talked about Cuba and Spain. One night after the dinner with the comrades was over, who were always there—Rafael Alberti, Maria Teresa Leon, Nicolas Guillen, Langston Hughes, Juan Jabas, Daniela Diaz, Antonio Aparicio, Ontanon, Rosario del Olmo, Xavier Farias—we put the chief of the division, Duran, in a real journalistic "Seige." As a good strategist he defended himself in a masterly way. At last he accepted the battle. Our dialogue was this:

MARINELLO. "I want to talk to you about your case. It seems very significant. A pure artist becomes a military chief."

DURAN. "I believe you are mistaken. I was never an artist only. Therefore, from a certain point of view my life did not suffer an important change. When you understand the intellectual work as vital as a service, the artist goes into action—the courts, the barracks, the clinic—without great spiritual commotion. He just goes on serving. . . ."

MARINELLO. "Yes. But it seems natural to me that the artist serves the revolution with the pen and not with the pistol. I don't know whether there are many artists who are commanders of divisions. . . ."

DURAN. "I don't think that that is very important. Everybody must serve the revolution as he best can. I believe that Alberti or Guillen do with their verses a work, an action just as adequate as mine. The day when . . . the revolution of Franco began, I didn't know how I should lend my help in the best way. They told me in the studio that the reactionary military men had made a rebellion. I took my leave from the actors without telling them where I would go. I presented myself to my party, the Communist, to receive orders. They gave me a strictly military assignment and a little rare one: Organize a group of motorcyclists without motor bikes. I don't know where the machines appeared, but the group was formed and was very useful. Since that time I have been going on working, fighting, and being promoted. From a private to a chief of a division. I won't deny that when they entrusted me with works of this type they knew that I had special qualities which I used before when I made a living. . . ."

MARINELLO. "But if you used so efficiently your capacities since the very first moment you need without any doubt a clear political definition which gave you such an enthusiasm that you would never recede before any type of action. . . ."

DURAN. "Sure, my evolution and my conviction were already formed. As every individual with a bourgeois background I had to suffer a large process of experience and superaction. . . . I knew the bourgeoisie in Spain. This were the people with whom we had to clash some day. They are our natural enemies. The possessing class. My repulsion for their work was turned one day into a decided attack. . . . In my movie studio where I worked 1 day a strike was declared. It seemed to me that it was my duty to join the strike. And by my condition as a director of the studio, I was considered as the responsible of the movement. We won the strike but a short time afterward I was dismissed. . . . I wasn't worried about this notice. On many other opportunities I had received tentative offers of the most important rival enterprise. It would be very easy to find another job. I offered my services. But everywhere I received pretexts and evasive answers. . . . I went to Paris. The same things happened there. . . . It was then and there that I felt myself as a worker, and that I united myself in a strong way with the proletarians of my country. Today I serve them with the arms. . . ."

NOTE—Gustavo Duran is called by Marinello "uno de los prestigiosos jefes del ejercito republicano" (one of the most renowned chiefs of the republican army). Among the names mentioned above (p. 2) are only two non-Communists (Aguirre and Companys). The others are the most famous Spanish Communists. That Duran is among them speaks for itself. Juan Marinello is a notorious Cuban Communist. He spent, together with Nicolas Guillen, who is a mulatto from Cuba, some time in Madrid in 1937. Whereas Marinello made this interview with Duran, Guillen mentions Duran at another opportunity in the same book. In "una fiesta en la Alianza" (party in the Alianza of anti-Fascist intellectuals) there was a multitude of well-known figures in the arts and letters. . . . Ernest Hemingway, the great American author, author of *Death in the Afternoon*, Langston Hughes, the great poet of the play *Mulatto*, Ivan Kolzow, the American poetress Marta Gellhorn, Duran . . . Madrid, November 1937.

Rafael Alberti, whom Duran mentions in his interview with Marinello, is a notorious Spanish Communist who lives now in exile in Buenos Aires. Alberti is also a friend of Marinello. He published in Buenos Aires in 1912 a book with all his poetries. In this book he dedicates one poem: "El Monte de El Pardo" to Gustavo Duran. This poem goes together with other poems dedicated to the "international brigades," to the Communist Spanish generals, Kleber, Lister, and Modesto. All of them serve now under other names in the Russian Army. Duran is again on this strange "list of honor" of prominent Communist leaders. Juan Marinello is also linked with the American Communist group. He published in Havana in 1941 a book, "La Libertad de Browder Es Tambien Nuestra Causa" (The Liberty of Browder Is Our Cause Too). He cooperated with the "Citizens Committee To Free Earl Browder," 1133 Broadway, New York. This committee was composed among others of the Negro singer, Paul Robeson, who also spent some time in Barcelona and Madrid with the Communist gang there, Congressman Vito Marcantonio, the Negro agitator, and the Chilean Communist, Salvador Ocampo, secretary of the Confederacion de Trabajo de Chile—the Communist-dominated trade union of Chile.

Rafael Alberti, same as Marinello, are both furious anti-Yankee. Alberti published in 1936 a very vile and vicious book against the United States of America called "13 Bandas y 48 Estrellas" (13 Stripes and 48 Stars)—poems of the Caribbean Sea. And these verses are dedicated to Juan Marinello, of

Cuba. Alberti says among other sweet things:

"Negro de la mano al blanco.
Blanco de la mano al Negro.
Que Cuba no es del Cubano,
Que es del Norteamericano.
Los Yankees vienen volando
Urracas asu-carreras
Mano a mano
Contra el norteamericano."

[Translation]

"Negro give the hand to the white man,
White man give the hand to the Negro.
Cuba doesn't belong to the Cubans,
It belongs to the North Americans.
The Yankees come flying
To fill their sugar bowls
Hand in hand
Against the North Americans."

And in another poem dedicated to Mexico he says bluntly, "Contra el gringo * * * prepare tu fusil" (Against the gringo prepare your gun).

Langston Hughes who is mentioned as a comrade of Gustavo Duran in Madrid is an American Negro Communist. He was in Spain during the civil war from 1936 to 1937 as a correspondent of the "Afro-American" of Baltimore. Hughes was also in Moscow in 1933-34 where he worked for Bolshevik pictures. He is a member of the "International Workers League" and has taken a prominent part in political cases of the United States of America as for instance "The Scottsborough Negro Boys Case" and in the fight for Browder. Ernest Hemingway who appears together with Duran in the "Allanza" in Madrid, also know well the famous "Brigade 36" mentioned in the death tunnel case. Hemingway we quote—says "a famous brigade nicknamed the moles of Ussera, who took the trench of death, that dominated suburb and dug and mined their way forward until the Franco forces had to give up position on that front * * * it was good to see the moles again. I had not been with them since early December 1937 and was envious to see how their morale was." (From The Spanish War, p. 70)

Nicolas Guillen, who together with Marinello wrote the book "Hombres de la Espana Leal" is a mulatto Communist from Cuba. He too is furiously anti-Yankee. In one of his poems, "El Esclavo (slave)" he says:

"Yo hi-jo de ti y de Africa * * *
Hoy esclavo de rojos yankees
despreciativos y voraces"

[Translation]

I am son of you and Africa * * *
I am today the slave of
Red-faced Yankees who are
Disreputable and voracious.

Marinello, Alberti, and Guillen, among many others play a dominant part in the notorious Communist organization of "anti-Fascists poets, writers, painters, and artists," with its seat in Montevideo, Uruguay, which also played a very doubtful part in Argentina in 1945 when Rodolfo Ghilardi, secretary of the Argentine Communists and prominent member of the above mentioned organization, cooperated with Mr. Braden against the Argentine Government in the organization of demonstrations, strikes, and illegal actions of every kind.

DOCUMENT NO. 4

GUSTAVO DURAN—STORY OF THE DEATH TUNNEL

(Treinta y dos meses de guerra—32 months of war) by T. Blanco Nomdedeu, Director de la Patria, Madrid, 1940

"On November 6, 1937, left this house, the street of Viriato and of Dolores Espana, in Nunez de Balboa, Numero 15, Madrid, the first expedition organized by Don Ismael. There arrived a car of the Brigade 36 which

they mounted—my two sons, Laureano, 24, and Louis, 22, also the pilot aviator, Don Emilio Camps. In this car which belonged to the general staff was a captain of the medical corps who had to give the signals to the control posts and who had to explain if necessary that he took the people in this car to render service in the fortifications. Captain Cabrera (he is mentioned together with Duran as the instigator of the death tunnel crimes in the book "La Causa General") and his "pal" told the expeditionaries that they were expected at 10 o'clock p. m. at Ussera. At this time the guard of the tunnel would be changed by loyal soldiers and then they would pass through the mine to a house which was situated between the two lines, in no man's land. From there they could enter into the liberated zone (Franco) previous to the convened password.

The second expedition left in different cars on November 8

What happened then to these expeditions? We don't know it in detail. We heard through the National Radio or through Radio Verdad the convened code words, Don Pedro and his people are well, and the cat and the she cat well; those of the staircase well. How could we have any doubt?

The terrible disappointment came later when my daughter Maria Teresa was evacuated by the Embassy of Rumania. Then they learned the terrible truth. None of the expeditions had arrived at its point of destination. When my daughter spoke to Gen. Quepo de Llano the sinister plot was discovered, and you can imagine the days of anguish we passed through. But without any doubt those wicked people acted on their own and we owe it to this fact that not all of us fell into the claws of the S. I. M.

(NOTE—On p. 102 The author says that "Celestino Martin, a young student of medicine and a refugee in the Embassy at Paragay, left Madrid through the death tunnel the 14th of October 1937 with two friends; on the 18th of October the priest Serafin Sanchez of the Provincial Hospital and his three nephews disappeared. Many other persons, among them six engineers and a lawyer, all known to the unhappy owner of the pension Ventura de la Vega, fell into the trap the 29th and 31st of October. And finally dona Nicolasa, the owner of this pension with her niece Natividad, also disappeared in the death tunnel." The author says "You must consider that those bandits didn't ask money and that they frequently raised difficulties, pretending the imminent risk of being discovered by the Reds.")

DOCUMENT NO. 5

GUSTAVO DURAN

Came to Habana, via Spain, via England and the United States of America. He met in Habana the former Spanish Minister of the Interior and Police (Ministro de defensa Nacional) Indalecio Prieto. In 1940 (?)—1941 Prieto recognized Gustavo Duran as a notorious Spanish Communist who in 1936-37 was chief of the S. I. M. in Madrid and who he had to dismiss on behalf of the disobedience and of placing only Communist agents in the secret police. Prieto met Duran through the American Legation in Habana where at that time Spruille Braden was Ambassador. He asked Braden to send him a member of his Legation who knew Spanish because Prieto does not speak English. The man sent by Spruille Braden was Gustavo Duran who was recognized immediately by Prieto, his former superior in Madrid. See also statement of Indalecio Prieto in his book "Como y por que salí del Ministerio de Defensa Nacional."—Ingrigas de los Rusos en Espana, Mexico DF, 1940—Impresos y Papeles, Calle Balsas (32), Mexico DF.—Also see speech of the Honorable ALVIN O'KONSER in Congress on March 18, 1947 (CONGRESSIONAL RECORD, vol. 93, pt. 10, pp. A1010-A1014).

Editorial From the Westport (Conn.) Town Crier

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Westport (Conn.) Town Crier.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BENTON JABS AT McCARTHY TO COVER A FUTILE RECORD

During recent weeks we have been regaled by the gyrations of our synthetic Senator WILLIAM BENTON, holding forth in the sacred Halls of Congress on any old topic that will land him on page 1 and keep his name before the electorate in preparation for the 1952 election.

It is an old formula that was perfected by the firm of Benton & Bowles, and it turned the trick in 1948 for Bowles and in 1950 for Benton. But now it is beginning to wear a bit thin. The daily dose of pontificating is being greeted with more and more yawns.

To pervert an old proverb, not one political sparrow can fall to earth without Senator BENTON noting it and commenting on it within 24 hours. This is comparatively harmless and amusing, but it is quite a different matter with BENTON's hatred of Senator JOSEPH R. McCARTHY, of Wisconsin, who is quaterbacking the drive to rid our Government of subversive elements.

Now it may be true, as some of our liberal friends claim, that McCARTHY has become a fanatic and witch burner, yet it cannot be denied that he has rendered great service in exposing some of our most dangerous Russophiles and an even greater service in arousing the general public to the danger to our governmental structure through this Red infiltration.

In return for all this McCARTHY should be kicked out of the Senate, according to BENTON, who objects violently to McCARTHY's entry into the Maryland election which brought about the defeat of Millard Tydings.

All this sound and fury has been climaxed by BENTON's challenge to McCARTHY to come into Connecticut next year and take the stump against him when he runs for reelection.

This challenge is the veriest flapdoodle, and nobody knows that any better than Senator BENTON himself, for the State Republican organization will not allow McCARTHY to enter the picture here.

It may be recalled that several attempts were made last year to bring the Wisconsin Red-buster here in behalf of the GOP nominees, Joe Talbot and Prescott Bush, but the idea was turned down by the Republican high command, which refused to allow McCARTHY to appear in Connecticut under GOP auspices.

It is true that McCARTHY made a speech in Bridgeport but this was sponsored by a group of independent women and not by the Republicans. Accordingly, it is perfectly safe for BENTON to stick his tongue out at McCARTHY and dare him to come here when he knows full well that, for some unexplained reason, the Republican State machine will not permit him to do so.

In marked contrast to McCARTHY's Red crusade, BILL BENTON's efforts in the Senate have been mainly devoted to building up BILL BENTON. He led and lost a farcical cam-

paign for the Voice of America which would have paid millions to the radio trust, and which was based on the preposterous premise that every home in Russia has a radio, and is permitted to use it.

If Senator BENTON has contributed anything to the Nation's weal in all the time he has been in Washington, it must have been so microscopic as to pass unnoticed. His McCARTHY-baiting cannot obscure a record of futility or his inability to understand the problems of the day. Connecticut, not Wisconsin, needs a change in Senators.

Farm Program Facts and Figures

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. COOLEY. Mr. Speaker, during the session of Congress which is just closing, there has been more talk about farm prices, farm income, and the cost of farm programs than in any session of Congress I can remember. This discussion has not been confined to the floor of the House but has been carried on generally in newspapers and magazines, by radio and television, and in the speeches of Government officials and others in every part of the country.

Many of the statements which have been made on this subject have been exaggerated. Some have been obviously calculated to mislead. Many have been misinformed and a still larger number have reached and supported a mistaken or distorted conclusion because they have failed to take into consideration all of the facts and figures available on the particular subject with which they were concerned.

There has been during the past year an almost frantic effort on the part of virtually every other segment of our Nation to try to saddle onto farmers the blame for high prices. In this campaign a few facts and figures have been snatched out of all context and relationship with other equally relevant facts and figures to try to prove the thesis that the farmer is the cause of inflation and that the farm price support program is a costly operation that is responsible for the high cost of food to consumers. Almost without exception statements of this kind have ignored the full facts readily available to anyone in the reports of the Department of Agriculture and other equally reliable Government agencies.

They have ignored the fact that the farm price-support program cannot possibly bring about a price for a commodity above 90 percent of parity, that the security and the orderly production made possible by support programs have been directly responsible for abundant farm production, which in many cases has kept farm commodities at relatively low prices, and the fact that the farmer has profited the least of any segment of our Nation from the economic conditions of the past few years.

Admittedly, the details of farm economics, farm and food prices, and farm-

support programs are complicated and complex. They involve many different computations and tabulations which are familiar only to experts on the subject. The real significance of statistical data relating to farm prices and farm production is not always obvious from a cursory inspection of the tabulations issued regularly by the Department of Agriculture. I am convinced that many of the erroneous conclusions which have been reached by a number of people regarding our farm program and farm prices are the result of failure to understand the material made available by the Department of Agriculture or of being given, time and again, only part of the figures relating to the subject.

In justice to the farmers of America, and in the interest of a true understanding of actual economic conditions, it seems to me that those who undertake to express an opinion on this subject should see to it that their views are based upon a study of all the available evidence and not merely upon a small and perhaps distorted portion of it. I believe that the facts and figures on our price-support programs and on the relationship of farm prices to the economy in general are their own best defenders. For that reason, Mr. Speaker, I wish to take this opportunity to present herewith, as chairman of the House Committee on Agriculture, a number of statistical tables relating to this subject for the information of the House. I shall make only such comment regarding each table as appears to be absolutely necessary to explain to anyone not familiar in detail with our farm programs, the meaning of the figures presented.

COMMODITY CREDIT OPERATIONS—THE BASIC SUPPORT PROGRAM

Table No. 1 is a cumulative analysis of the results of operations of the Commodity Credit Corporation from October 17, 1933, the start of the farm price support program, through August 31, 1951. The CCC is the agency of the Department of Agriculture charged with the responsibility of carrying out the price support program. Column 1 shows the various commodities which have been supported from time to time during this 18-year period. Columns 2 and 3 show the operations during the prewar period and during the time of World War II. Columns 4, 5, and 6 show the operations during the fiscal years 1950, 1951, and the first 2 months of 1952. The columns for the fiscal years 1947, 1948, and 1949 have been omitted in order to conserve space but are available in the monthly report of the Corporation. Column 7 indicates commodity-by-commodity the profit or loss on each item throughout the almost 18 years of operation of the price-support program.

The price-support program was established primarily to stabilize production of the great basic agricultural crops: corn, cotton, wheat, rice, tobacco, and peanuts. The figures in column 7 show that during its 18 years of operation, the price-support program has returned a net profit to the Government of about \$35,000,000 in the operation of these basic programs. The largest profit in this group is about \$268,000,000 on cotton. The largest loss in the basic com-

modities is \$84,000,000 on peanuts and this is due almost entirely to the cost of reconverting the peanut industry from its wartime production of this commodity for oil purposes.

NONBASIC COMMODITIES

From time to time the Commodity Credit Corporation has been required to support the price of other commodities. Its obligation to support many of these nonbasic commodities arose during World War II when, in order to secure additional production of certain commodities to meet the wartime emergency, those commodities were guaranteed price support at a high level for the duration of the war and 2 years thereafter. These are the commodities which were guaranteed support by the Secretary of Agriculture under the Steagall amendment to the Stabilization Act of 1942 and are the ones generally referred to as "Steagall commodities." Reference again to column 7 indicates that the loss on nonbasic commodities has been a little over \$1,000,000,000.

Referring to the individual nonbasic commodities, it will be noted that four hundred and seventy-eight million of this loss was incurred on potatoes, ninety-two million on wool, and one hundred and sixty-five million on eggs. Thus, out of the billion dollars which has been lost in the support of nonbasic commodities, three commodities—potatoes, eggs, and wool—have accounted for \$736,000,000 of this loss, or 71 percent of the total. The most costly of these programs, the potato program, was put into effect under the Steagall amendment and was terminated by Congress as soon as it was possible to do so after the conclusion of the war.

I want to emphasize again, as I have done frequently on the floor of the House, that it was never the intention of Congress that perishable agricultural products should be supported with a loan or purchase and storage program as a permanent part of the farm price support program. We got into the support of perishables chiefly as a wartime measure—to secure adequate production of certain foods that were found to be especially needed during the war period. Reference to column 2 of the table will show that in the almost 8 years prior to the war the total loss on the support of nonbasic commodities was only \$4,602,190 and \$4,435,579 of this amount was on naval stores, the dependable and adequate production of which is a military necessity.

During the war, however, we got into the support of perishables such as eggs and potatoes because we needed increased production. We may believe now that the designation of some of the commodities to receive high-level support may have been ill-considered and that better administration could have held down their cost. But those in charge of our food program did the best job they could—and on the whole it was a most excellent job—under difficult emergency conditions. The cost of this wartime food program should be considered as part of the cost of the war, rather than as part of the cost of the farm price-support program. Incidentally, the entire cost of our wartime

agricultural program, including the postwar adjustment to peacetime conditions, is small compared to the amount of money paid out to manufacturing industries on account of the termination of war contracts. The principle involved is exactly the same. But the entire cost of the agricultural program was less than a billion dollars, while manufacturing industries have received about \$6,500,000,000 in payments to compensate them for the termination of their wartime production contracts.

THE SUGAR PROGRAM

In addition to the support programs for basic commodities carried out by the Commodity Credit Corporation, there is another—the sugar support and production program—which is administered by another branch of the Department of Agriculture but which should be considered as an integral part of our overall farm program. The sugar program has been in operation since 1934. During that period it has assured us of an ample supply of sugar at all times, has

stabilized the price at levels oftentimes below those of the world market, and has made possible the virtual elimination of tariffs on sugar. It has done this at a net profit to the Government of more than \$230,000,000, over and above all expenditures, including administrative costs.

If this program is considered as a part of our basic farm program, as it should be regarded, the result is a profit of more than \$265,000,000 on the operation of our basic agricultural program in the past 18 years.

TABLE I.—Analysis of program results from Oct. 17, 1933, through Aug 31, 1951¹
[Realized gains and losses]

Program and commodity	Oct. 17, 1933, through June 30, 1941	July 1, 1941, through June 30, 1946	Fiscal year ended June 30		Fiscal year 1952 through Aug. 31, 1951	Oct. 17, 1931, through Aug. 31, 1951
			1950	1951		
Price-support program¹						
Basic commodities						
Corn	\$20,078,488	\$14,330,560	\$17,189,119	\$7,18,830	\$292,805	\$52,460,545
Cotton	27,401,798	218,328,306	3,419,604	28,938,218	112,742	268,563,867
Puerto Rican		126,011				130,108

¹ Allocation of losses and gains as between "Price support program" and "Supply program" for the period prior to the fiscal year 1947 was made on the basis of an analysis completed in April 1949. Since accounting records maintained prior to July 1, 1946, did not provide for this segregation, it was necessary to analyze program results in detail and in some cases make an estimate of the distribution between "Price support" and "Supply" of the total operating result as shown by the accounting records. This analysis was based on all known factors concerning the operations with respect to each commodity.

² Denotes loss.

³ Includes export differential on owned or pooled cotton only. Differential on exporters' cotton included under "Commodity export program."

⁴ Includes price-support loss of \$2,820,639 on the 1943 and 1944 potato programs, which was formerly included under the general commodities purchase program.

⁵ Includes price-support loss of \$11,956,386 on the 1944 egg program, which was formerly included under the general commodities purchase program.

⁶ Includes gain of \$178,697,602 carried as "Special reserve, general commodities purchase program" as of June 30, 1946, and transferred to income in May 1947. Also see ⁴ and ⁵.

⁷ During the period July 1, 1946, through June 30, 1949, activity under this program was reported as general supply program.

APPENDIX TO THE CONGRESSIONAL RECORD

A6957

TABLE I.—Analysis of program results from Oct. 17, 1933, through Aug. 31, 1951—Continued

[Realized gains and losses]

Program and commodity	Oct. 17, 1933, through June 30, 1941	July 1, 1941, through June 30, 1946	Fiscal year ended June 30		Fiscal year 1952 through Aug. 31, 1951	Oct. 17, 1933, through Aug. 31, 1951
			1950	1951		
Foreign purchase program *						
Cotton		\$5,439,464		\$2,617	\$23,980	\$5,922,341

Grand total	\$60,380,701	\$1,064,304,241	\$246,583,888	\$347,472,212	\$20,134,769	\$2,776,378,695

* Denotes loss.

¹ Insofar as possible, operating results have been retroactively classified to correspond with current budgetary program. In some instances, the accounts maintained prior to July 1, 1946, did not make possible a precise segregation of the results of foreign procurement operations.

¹⁰ Includes export differential on exporters' cotton only.

¹¹ Includes losses totaling \$56,230,432 on price-support commodities disposed of in accordance with Public Laws 389 and 393, 80th Cong., 1. e., transferred to foreign as-

stance outlets at a price equal to price of a quantity of wheat having equivalent calorific value. The Corporation was reimbursed for these losses by the Secretary of the Treasury.

¹² Subsidy losses on corn for alcohol, wheat for alcohol, and wheat for feed are included on an estimated basis. For detail of subsidy costs by commodities by fiscal years, see report of financial condition and operations as of June 30, 1949.

INVENTORIES

Frequently one sees or hears reference to the tremendous inventories of agricultural commodities held by the Commodity Credit Corporation either under its loan or purchase program. The inference is almost always that these inventories represent a dead loss to the Government—that they are vast quantities of agricultural products which have been withdrawn from the market and which are somehow going to disappear from being, with the taxpayer footing the bill for their entire cost. Reference to table II will indicate how false this assumption is.

This table shows the entire inventory of the Commodity Credit Corporation on October 29, 1951—both as to those commodities which have been purchased by the Corporation to which it actually holds title, and those which are merely pledged to the Corporation to secure price-support loans. Some of the items listed do, indeed, involve very consider-

able quantities: There are actually in the ownership of the Corporation, for example, 214,000,000 pounds of linseed oil, 386,000,000 bushels of corn, 344,000,000 pounds of winter cover-crop seeds, and 144,000,000 pounds of rosin.

The assumption that these inventories represent a dead loss to the Government—or even liabilities—is far from correct, however, as a glance at the totals at the bottom of columns 3 and 7 and columns 5 and 8 will disclose. Columns 3 and 7 show the aggregate cost of and the amount of loans outstanding against CCC's entire inventory. Columns 5 and 8 are the estimated current market value of those commodities.

Reference to the table will show that the total cost of the CCC inventory, both loans and purchase items, is \$1,802,234,000. The current market value of these same commodities is \$1,846,457,000. Thus, at market prices on October 29, 1951, the inventory held by the Commodity Credit Corporation, both by out-

right purchase and as collateral for loans, is worth \$44,223,000 more than the Corporation paid for these commodities.

In the case of those commodities which have been purchased by the Corporation, the cost of administration and of storage, transportation, and processing where necessary, is included in the acquisition cost. It should also be pointed out that when I asked the Department to prepare this table for me I requested that it adopt the most conservative estimates of the present value of its inventory, particularly in the case of perishables such as dried milk, butter, and eggs, where the market is such that if the quantities held by the Corporation were to be thrown on the open market, they might be expected to affect the price. Rather than using the quoted market price for such commodities, therefore, the Department has in most cases used the actual price at which the last sizable sale from their inventory was made.

TABLE II.—Commodities in inventories and pledged for loans—Investment and estimated market values as of recent dates

Commodity	Inventories (Oct. 29, 1951)					Loans outstanding (Sept. 30, 1951) ¹		
	Estimated quantity	Approximate unit cost	Aggregate cost	Estimated current market value ²		Quantity under loan	Amount of loans	Estimated current market value of quantity under loan ³

¹ Oct. 1, 1951, United States average price received by farmers.

² Currently there is no price support program for eggs.

³ Of this quantity, 103,400,000 pounds withdrawn from sale.

⁴ Withdrawn from sale.

NOTE.—This report reflects operating data taken from various sources and is, in part, based on preliminary estimates. The official inventory and loans of the Corporation, as taken from its accounting records, are those contained in the monthly report of financial conditions and operations.

CCC ACCOUNTING SYSTEM

From time to time Members have asked me why the records of the Commodity Credit Corporation show relatively heavy losses in the support of some of the perishable commodities during the past two fiscal years, when prices of those commodities have been relatively good and when many of the support programs for them have been proportionately inactive. Reference again to table I will show that in 1950 the support of nonbasic commodities cost \$249,000,000 and in 1951, \$345,000,000, in spite of the fact that farm prices were increasing during part of 1950 and remained at a fairly high level during 1951.

The reason for this seeming inconsistency is that, under the accounting system used by Commodity Credit Corporation, profit or loss on commodities are charged as of the time those commodities are actually sold or disposed of, instead of against the year in which the commodities were bought. As all Members of Congress will remember, there was very considerable pressure from many sources during 1950 to dispose of the sizable quantities of perishable commodities such as dried milk, butter, eggs, cheese potatoes, and others, acquired by the Department under its price-support program. Many Members, including myself, felt that it would be better to give these food commodities away before they had deteriorated rather than to hold them indefinitely in the hope of minimizing losses of the Corporation or even perhaps making a profit on them. As a result, Congress authorized and the Department of Agriculture adopted some extraordinary means of disposing of these commodities for food purposes, with little regard to the losses involved.

The substantial losses on these commodities in the fiscal years 1950 and 1951, therefore, represent this forced liquida-

tion in which these commodities, which had been purchased in prior years as part of the price-support program, were sold substantially below cost or in many cases actually given away. It is probable that had some of these commodities been retained in storage longer they could have been disposed of at current market prices and the losses substantially minimized, as was the case with butter. The losses in 1950 and 1951 on the nonbasic commodities, therefore, do not reflect the cost of supporting those commodities during that year, but rather the loss sustained in disposing of inventories acquired under previous year's support programs.

FARM PRICES

Since the start of the war in Korea there has been a general upward movement of prices that has included practically everything the American consumer eats, wears, buys, or has done for him. During this period there has been a constant effort on the part of a great many people to try to attribute to the farmer almost the entire responsibility for the increase in cost of food and similar consumer items. Table III shows conclusively, in my opinion, that this contention is entirely without foundation. Farm prices not only have not risen as far and as fast as have other prices during the past 2 years, but they are in many cases lower today than they were in 1948. How many other prices, or wages, or pay for services, can be found which are lower today than they were in 1948?

Table III lists in column 1 33 major agricultural commodities produced in the United States. Column 2 shows the price received by farmers for each commodity on October 15, 1951. Column 3 shows the price which those same commodities brought to farmers sometime during the year 1948. Out of these 33

major commodities only 10 are bringing farmers as much now as they brought them in 1948. These 10 are cotton, peanuts, sweetpotatoes, tobacco, grapefruit, beef cattle, veal, sheep, lambs, wool.

Out of these 10 commodities which have gone up in price in the past 3 years only 3—cotton, beef cattle, and wool—are of major significance in the cost of living. The one commodity about which there has been more talk than any other, and which is undeniably of great importance to consumers—beef cattle—is up 15 percent in price over 1948.

Of the other seven commodities which are bringing farmers more today than they did in 1948, peanuts, sweetpotatoes, and grapefruit are relatively insignificant in affecting the cost of living. Veal and lambs are somewhat more important to the consumer, but sheep—which have advanced in price more than any other commodity since 1948—44.76 percent—have no significance whatever to the consumer but are actually an increased cost to the farmer, since virtually the only purchasers of mature sheep are farmers who want to produce lambs or wool.

On the other side of the balance, some of the great staple food products are substantially lower in price today than they were in 1948. Wheat, for example, is \$2.10 per bushel now compared to \$2.81 in January 1948. Potatoes are only 68 percent of their price in April 1948. Dried beans are 27 percent lower now than they were in 1948. The hullabaloo that has been raised about beef prices has obscured the fact that hogs are bringing farmers only 75 percent as high a price today as they did in September 1948. The farm price of butter is almost 10 cents a pound lower now than it was in January 1948. Chickens are 25 percent lower than they were in 1948, and the Thanksgiving turkey is

bringing farmers only 35.8 cents per pound now compared to the 51.4 cents he received in December 1948.

Whatever the answer may be as to what has caused the drastic increase in

consumer prices in the past 18 months, it is quite clear that the increase has not been caused by farmers receiving any excessive or unusually high prices for their products.

cent, can be entirely unwarranted and erroneous.

One reason why the general parity ratio is not a reliable index of the prices most farmers are receiving is that this ratio may be, and frequently is, pushed up unnaturally by a very few commodities which happen to be selling far above parity, while most of the commodities farmers have to sell are below parity. This is the case at the present time, as is shown clearly by table IV. This table shows the parity ratio for the major commodities, as published monthly by the Department of Agriculture. Data for wool, mohair, and honey are not available in time for publication simultaneously with the others.

Out of the 28 commodities for which the parity ratio is shown, only 5 were bringing farmers more than parity on October 15: cotton, sweetpotatoes, beef cattle, lambs, and veal calves. The other 23 commodities are all selling for less than parity. This does not mean necessarily that the producers of those 23 commodities are losing money on their operation. But it does mean that a general parity ratio of 105 has absolutely no significance to a farmer whose cash crop is wheat—at 87 percent of parity—or potatoes—at 76 percent of parity. The fact that beef cattle at 146, veal calves at 147, and lambs at 137 have pushed the average parity ratio up above 100 means nothing to an orchardist whose apples are selling at 66 percent of parity.

Analysis of this table, therefore, shows clearly that while parity may be a reasonably accurate yardstick of the relative purchasing power of individual farm commodities, it is not an accurate guide to the over-all price level of farm products generally, or to the prosperity of individual farmers.

¹ Equivalent on-tree returns for all methods of sale.

PARITY AND FARM PRICES

The parity index, as it is applied to farm prices, is widely misunderstood and frequently misused—even by its friends. Parity is not based upon cost of production and therefore does not necessarily indicate a fair return to the farmer. It is not a measure of farm income or prosperity, since it does not take into account either the volume of production or the time at which the crop was sold. The over-all parity ratio may even be seriously misleading, since it is frequently influenced by high prices for a relatively few commodities which may be produced by only a small percentage of the Nation's farmers.

Parity was established in the Agricultural Adjustment Act of 1938 as a guide for the support of the five great basic commodities—corn, wheat, cotton, rice, and tobacco—the support and control of which was authorized by that act. Parity payments, so-called, were limited specifically to those commodities and parity was defined as "that price for the commodity which will give to the commodity a purchasing power with respect to articles that farmers buy equivalent to the purchasing power of such commodity in the base period."

When used for the purpose for which it was intended—as a measure of the purchasing power of a bushel of wheat or a pound of cotton, compared to the base period—parity is still a relatively reliable yardstick. When it is applied to

some 170 agricultural commodities, however, its reliability as an absolute measure of the purchasing power of each commodity decreases and its chief value is that of a handy index with which to compare prices from 1 month to another or from year to year. When the parity ratios for all or a great many of these commodities are calculated together in order to give a general index of prices received by farmers, the shortcomings of this general parity ratio figure as a measure of farm purchasing power are so great that it cannot be regarded as any indication whatever of farm income or the general level of prices actually received by farmers.

This general misconception of the basic nature and purpose of the parity index is responsible for much misunderstanding of farm prices and farm programs. It is only natural for most people to assume that when the so-called general parity ratio of farm prices is at 105—as it was on October 15, 1951—or at 111—as it was on February 15, 1951—all farmers are receiving above parity for their products and must, therefore, be very prosperous. Because parity was intended as a measure of the relative purchasing power of individual farm commodities—and originally only basic farm commodities, at that—and not as a measure of the general level of farm prices, the assumption that farmers generally are receiving above parity prices for their products when the general parity ratio is above 100 per-

Commodity:	Average price as a percentage of parity price—Oct. 15, 1951
Other nonbasic commodities—Con.	
Apples.....	66
Beef cattle.....	146
Chickens, live.....	77
Eggs.....	89
Hogs.....	95
Lambs.....	137
Turkeys, live.....	89
Veal calves.....	147

There are occasions when the parity ratio for an individual commodity may not even be an accurate guide as to what farmers have actually received for that commodity. The reason for this is that the parity index does not take into consideration either the volume of production or the time at which the specific commodity has been sold. Like any other business enterprise, the income of a farm business depends not only upon the price at which its products are sold, but upon the number of units that have been sold. If farmers, individually or generally, have had a bad production year—have produced few units of their products for sale—a high parity ratio for that commodity is of little significance to them. If the parity ratio goes up after the farmer has disposed of his annual production—as is frequently the case with truck crops and seasonal fruits and vegetables—the public may get an entirely false impression of the price and income derived by the producers of those commodities. This was the case with the cotton crop of 1950. In the spring of 1951 the price of cotton reached unprecedented heights in the United States. Data published at that time indicated that farmers were getting 128 percent of parity for their cotton. As a matter of fact, however, most farmers had disposed of their cotton months before that commodity reached its highest point and therefore received considerably less than 128 percent of parity for their crop.

Another thing that should be remembered concerning the parity index is that it bears no direct relationship whatever to the cost of production and therefore does not necessarily reflect what amounts to a fair price to the farmer. The parity ratio for any commodity is determined solely by the price of that commodity at current levels compared to the base period and the price of things that farmers buy compared to that same base period. It does not take into consideration or attempt to calculate the actual current cost of producing that commodity and should not be regarded as any measure of production costs.

Even in the case of some individual commodities the parity ratio may be a misleading guide as to the price farmers are actually receiving for their products. Such a misleading situation can and does arise in the case of those commodities where several different types and grades of the product—frequently used for entirely different purposes—are lumped together in calculating the par-

ity ratio for the commodity as a whole. Specific examples of this are to be found in tobacco and beef cattle. Tobacco farmers have long known that the parity ratio for tobacco as a whole is inadequate to express the actual parity position of the many different types and grades of tobacco. The public has never been greatly concerned with this, because it has thus far been a technical problem of interest chiefly to tobacco producers.

The public has been very much interested in the parity ratio for beef cattle, however, and has been seriously misled in what it thought it knew about this parity price by the very fact that the many different types of beef cattle are grouped together in arriving at a parity ratio for beef cattle as a whole. Such a figure does not give any indication of the relative price or parity ratio of the various types and grades of beef cattle or give any indication that the types most frequently purchased by consumers are selling far below the general beef cattle parity ratio, while those types which are purchased by farmers are selling far above that ratio.

For a number of years the Department of Agriculture has been computing parity equivalent prices for the various grades and types of beef cattle. This series was discontinued at the end of 1950 when the new beef-grading system went into effect, because adequate data was not available to carry out the parity equivalent on the new grades. The last computation of this parity equivalent for the various types and grades of beef cattle was made in December 1950 and is reproduced here-with as table V.

In December 1950 beef cattle generally were listed by the Department as bringing farmers 141 percent of parity and it was on the basis of this high figure and the somewhat higher prices that occurred within the next 3 months, that the Office of Price Stabilization decided to take the unprecedented action of rolling back beef prices to pre-Korea levels.

Although beef cattle generally were calculated to be selling at 141 percent of parity in December 1950, a glance at the last column of table V shows that actually only three types of beef cattle were selling for as much as 141 percent of their parity equivalent. These were canner cows at 167 percent of parity, beef bulls at 149 percent of parity, and feeder steers at 142 percent of parity. These three types of beef animals—while being almost entirely responsible for the high parity ratio of beef cattle generally have little or no direct effect on consumer prices and the cost of living. Canner and cutter cows and beef bulls are used almost entirely for hot dogs, sausages, bologna, and similar products. Feeder steers do not enter into the consumers cost of living at all, but are part of the farmer's cost of doing business—they are the raw material he must obtain in order to pro-

duce the kind of beef consumers expect to find in their retail markets. The high price of feeder steers is an added cost to the farmer—not to the consumer.

On the other hand it will be seen that in December the parity equivalent of the grades and types of cattle which comprise the great bulk of the meat appearing in retail markets were bringing farmers not more than 126 percent of their parity equivalent. Good beef steers, which comprise the great bulk of the average consumers beef ration, were bringing farmers only 114 percent of parity, and Choice and Prime beef steers were bringing only 108 percent of their parity equivalent. It is quite clear, therefore, that the beef cattle parity ratio of 141 had very little significance to farmers and livestock men and that it was probably responsible for much misunderstanding in the minds of others.

TABLE V.—Parity price equivalent and market prices per hundredweight for selected classes and grades of beef cattle at Chicago, December 1950¹

Class and grade	December 1950		
	Parity equivalent	Average price ²	Percent of parity equivalent
Beef steers: ³			
Choice and Prime.....	\$33.48	\$36.12	108
Good.....	28.80	32.89	114
Medium.....	24.30	29.71	122

Cows:			
Good.....	18.00	22.78	127
Canner.....	10.80	18.00	167
Beef bulls, good.....	17.82	26.48	149
Feeder steers ⁴	10.98	24.37	142
United States ⁵	19.08	—	—

¹ Parity equivalent estimates on basis of cattle price comparisons published in April 1942 price report.

² Chicago market prices are averages for the week in ending the 15th of the month.

³ Sold out of first hands from the Corn Belt.

⁴ Includes Canner and Cutter.

⁵ Average of all weights and grades.

⁶ United States average cost to packers.

FARM INCOME

Table VI shows that, rather than enjoying an increasing level of income during the past few years—as has almost every other segment of the population—farmers have received a smaller and smaller proportion of the national income.

While the income of the nonfarm population of the United States was increasing from about \$163,000,000,000 in 1947 to \$198,000,000,000 in 1950—an increase of 21.8 percent—the net income of farm operators decreased from \$17,000,000,000 in 1947 to less than \$13,000,000,000 in 1950—a decrease of 25.57 percent. During the same period the gross farm income—including farm wages, and so forth—decreased more than 4½ percent.

In 1947 gross farm income was 18.67 percent of the national income. In 1950 it was only 14.99 percent of the national income.

WHERE DOES THIS LEAVE THE CONSUMER?

According to the best available figures, the United States is one of only three nations in the world where agricultural production has been able to keep up with expanding population since the close of World War II. In 1951 total agricultural production in the United States is estimated at 46 percent above the 1935-39 average and per capita food consumption is up 13 percent. There can be no doubt that the stability and assurance that our farm programs provide for American agriculture have contributed substantially to our ability to increase our agricultural output in this manner.

No one will deny, of course, that new and better machinery, insecticides, fertilizers, and farming practices have also contributed greatly to our increased agricultural production, but it should be equally obvious that without some assurance that he will not produce himself into bankruptcy—and without a measure of prosperity which has permitted him to buy the new machines and take chances on new and expensive chemicals and production methods—the American farmer would have had neither the ability nor the willingness to take full advantage of the modern potentialities for increased farm production.

It must be remembered that American farmers sell the output of their labor, skill, and capital in the greatest free market remaining anywhere in the world. In virtually every other segment of our economy the producer puts a price tag on his product—a price that includes all of his labor and material

costs and some margin of profit for himself. Labor, through its union organizations and contracts, puts a price tag on its services. The farmer is the only person in the United States who must go to the market place, with his product figuratively under his arm, and ask, "What will you give me for it?"

The price he receives is not the price he puts on his own product; it may or may not reflect his actual production costs plus a profit for himself. The price of his product is the price the consumers place on it. He receives for the things he produces exactly what the consumers think those commodities are worth and are willing to pay for them. Farmers want to produce in abundance, but they have learned from bitter experience that, on this great free market where they sell their product, an oversupply of a very few bushels or pounds or dozens of any commodity—an offering at any one time of more of a commodity than the consumers want to buy at that particular time—can result in a break in the price of that commodity which will affect the whole year's crop and may result in an actual and substantial loss to the farmer on his year's operation.

There can be no question, therefore, that our agricultural price-support program, which does not guarantee farmers a fair price, which does not guarantee them a profit, but which does provide assurance that a small or temporary surplus of a commodity will not be permitted to wreck the market, has been one of the important factors in giving

farmers the assurance, the willingness, and the ability to produce abundantly.

The results of this stabilized production are readily measured in the pounds, bushels, and tons of increased agricultural output in the United States and in our steadily increasing per capita consumption of food. Not so easily measured but fully as important to the consumer and to the economic welfare of the country is the price stability which has resulted from this abundant and intelligently directed outpouring of agricultural products. No housewife who can remember as far back as World War II needs to be reminded that shortages of foods and other essential items inevitably mean skyrocketing prices, black markets, and the virtual disappearance of the short items from the shelves of legitimate retailers and from the tables of the average consumer. It does not take much of a shortage, percentage-wise, to bring about this distressing condition. By assuring constant and ample production, our farm programs have aided tremendously in preventing the outrageous price increases that always and inevitably accompany a condition of scarcity.

More significant even than the overall increase of 13 percent in per capita consumption of foods that has taken place since the years 1935-39, is the fact that our national diet has been steadily improving for the past several years. Table VII shows a revealing story. It shows that American consumers are eating more of the better, tastier, more nutritious foods and less of the foods such as cereals and potatoes which are commonly associated with a low-level diet. It will be noted that our consumption of dairy products, excluding butter, has increased 21 percent since 1939, egg consumption has increased 38 percent, canned fruits 21 percent, canned juices 247 percent, and meats, poultry, and fish 16 percent. On the other hand, consumption of flour and grain products has decreased 13 percent during the same period, potatoes and sweetpotatoes 19 percent, and dried fruits 29 percent.

1 Preliminary.

Bureau of Agricultural Economics. Per capita consumption of food, retail weight equivalent, weighted by average retail prices for the base period, 1935-39. Consumption for total population 1909-40, civilian only, beginning 1941.

Rather than costing the consumer more of his income, food is proportionately cheaper today than it was in 1939. According to the latest figures of the Bureau of Agricultural Economics, if consumers were purchasing the same foods today that they purchased in 1939, they could buy those foods with 17 percent of their income, compared to the 20 percent of their income they paid for those foods in 1939. But consumers, as has been pointed out, are eating more and better food. Even so, on a per capita basis, these more and better foods of 1951 are costing consumers only 23 percent of their income compared to the 22 percent they actually spent in 1939.

All of us, as consumers, would like to see lower prices for food and the other things we buy; but few of us would want to see our wages or our income reduced. From time to time someone longs nostalgically for the 35-cent pork chops and the 20-cents-per-dozen eggs of the 1930's but I imagine that most of those same persons would be reluctant to go back to the wages or the income they were receiving at the time of those low food prices. Certainly prices of foods and everything else that the consumer buys have gone up tremendously since 1939—but so have salaries, wages, and incomes. It is time that we as consumers learn that we cannot have 1951 wages and prices on the things we want to sell and 1939 prices on the things we want to buy.

Actually, the most reliable data available from Government agencies indicates that consumers are better off today—that the purchasing power of their dollar or of an hour's labor is greater in terms of food and other necessities—than they were in 1939. Table VIII shows the average weekly earnings in several selected industries as computed by the Bureau of Labor Statistics. It shows that, for example, average weekly earnings of workers in all manufacturing industries have increased more than 170 percent from 1939 to August 1951. During the same period the price of food has increased 138 percent while the price of all items included in the consumers price index has increased a little less than 87 percent.

TABLE VIII.—Average weekly earnings

	1939	August 1951	Percentage increase
All manufacturing.....	\$23.86	\$64.56	170.58
Bituminous coal mining.....	23.48	75.60	216.58
Building construction.....	30.39	84.62	174.45
Auto manufacturing.....	32.91	78.98	183.91
Iron and steel (foundries).....	27.52	70.94	157.78
Textile-mill products.....	10.84	48.15	185.93
Farm workers (per day with board).....	1.30	15.00	284.61

CONSUMERS' PRICE INDEX

	1939	August 1951	Percentage increase
Food.....	95.2	227.0	138.44
All items.....	90.4	185.5	86.62

1 October 1951.

In recent years we have heard much discussion of the take-home pay of workers and the actual purchasing power of the consumer's dollar. Table IX, compiled by the Bureau of Labor Statistics of the Department of Labor, shows that the take-home pay of workers in manufacturing industries in the United States is greater today, both in terms of actual pay and in terms of purchasing power, than it was in 1939 or even in 1948.

The last column in the table shows the net spendable average weekly earnings of a worker with three dependents in terms of 1939 dollars—in other words, in terms of how much his weekly pay check will buy today compared with 1939. It will be noted that from 1939 to December 1950 the purchasing power of his weekly take-home pay has increased 43 percent. Comparison of the figure for December 1950 with 1948 indicates that even during this period which encompasses the post-Korea rise in prices, the purchasing power of the worker's pay check has increased 9.8 percent. It should be added that since the publication of this table, preliminary data indicates that the purchasing power of the worker's pay check in July 1951 was about 7 percent above the 1948 level. It should be noted also, that the net spendable average weekly earnings used in this table represent the worker's pay after social security and income taxes have been deducted.

TABLE IX.—Gross and net spendable average weekly earnings of production workers in manufacturing industries, in current and 1939 dollars, 1939–50

Period	Gross average weekly earnings		Net spendable average weekly earnings ¹				Period	Gross average weekly earnings		Net spendable average weekly earnings ¹

¹ Net spendable average weekly earnings represent the average gross earnings of production workers in manufacturing industries less social security and income taxes for which the specified worker is liable. These net spendable average weekly earnings are then divided by the Bureau's consumers' price index adjusted to an average 1939 base, to obtain net spendable weekly earnings in 1939 dollars.

NOTE.—Data for series based on 1939 dollars revised beginning July 1942 to conform to the Adjusted Series Consumers' Price Index.

Another measure of where the average consumer stands is to be found in the quantity of food which an hour's work will buy today, compared to previous periods. Table X shows the quantities of typical foods which could be purchased with 1 hour of factory labor at various periods in the United States. In

September 1951, for example, 1 hour's labor would purchase 10.3 pounds of bread, compared to 7.9 pounds of bread in 1939; it would purchase almost as much round steak or pork chops as it purchased in 1939, and somewhat more than the same labor would have purchased in 1929.

trade. Or is it just the case of a few shoe-shine boys trying to earn a fast dollar?

Senator McCarthy

EXTENSION OF REMARKS OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Seattle Post-Intelligencer.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR MCCARTHY

Within the past month or so two good reporters have gone into Wisconsin at different times to assess the chances of Senator JOSEPH R. MCCARTHY for reelection next year.

Identical conclusions were reached by Constantine Brown, syndicated Washington Evening Star columnist, and Luther A. Huston of the New York Times. MCCARTHY will win the Republican primaries in April and is a sure in.

Why, with the savage attacks against him, is he a sure in? The two reporters differ when they discuss behind-the-scenes stuff, but they come together on a point that seems to us the most important in a consideration of MCCARTHY and McCarthyism.

Mr. Brown speaks of the general admiration for MCCARTHY's "bare-knuckles fight against the Communists in government."

Mr. Huston says Wisconsin people feel "there has been entirely too much complacency on the part of the Truman administration over the situation assailed by Senator MCCARTHY and that he had done the country a service by bringing it to light."

The Times man also toured Minnesota, South Dakota, Iowa, Illinois, and Indiana. In Iowa he got to talking with the editor of the Storm Lake Pilot Tribune, a weekly with

TABLE X.—Quantity of each item that could be purchased with 1 hour of factory labor, United States, September 1951, with comparisons

Bureau of Agricultural Economics
Compiled from reports of the Bureau of Labor Statistics.

Looking at our farm program as a whole, Mr. Speaker, I think it is fair to say that this program has not been costly of public funds; that it has saved consumers billions of dollars by making possible abundant production that has stabilized prices; that it is the spark plug of the production efficiency which means more and better food for American consumers; and that its stabilizing influence has been a most important factor in bringing American agriculture from the bankruptcy of the early thirties to the prosperous position it now occupies. That stability and prosperity are essential to all America—for the farmer is both the city man's food producer and his best customer.

The Committee on Agriculture does not have before it one single bill proposing repeal of any major portion of our farm program—evidence that the

program is working and that it is working to the best interest of all the people of the United States.

Gold, Opium, Diamonds

EXTENSION OF REMARKS OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SIEMINSKI. Mr. Speaker, gold is flowing to India, opium from Red China, and diamonds into the United States.

I trust someone will soon reveal the significance of this triple alliance in

a circulation not quite 5,000, deep in the grass roots country.

"In our judgment," said the editor, "people are quite willing that the Wisconsin Senator shall continue to blow out the Commies. There is a deep suspicion that his allegations, perhaps demagogic at times, are not always red herrings."

So we may take it that while many people in the Midwest do not always approve McCARTHY's methods, most of them support his aims.

There is no question that at times McCARTHY's methods would perturb the Marquis of Queensberry. But when you take on Communists and fellow travelers, particularly when they are entrenched in power and muzzling happily at the Government trough, you have to fight lumber-camp style. If you don't, they murder you.

Sometimes a man is admired for the enemies he makes. We may admire McCARTHY for this, for he is feared and hated chiefly by Communists and pinks and the type of "liberal" who, paradoxically, wants more and more government power and less and less individual freedom.

We think the people of the grass roots are right in their judgment of McCARTHY. He's a fighter, and he's on the right side.

UNESCO and Our Public Schools— Women Warned on Lending Names to Red Causes

EXTENSION OF REMARKS

OF

HON. JOHN T. WOOD

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. WOOD of Idaho. Mr. Speaker, if we make the mistake of assuming that communism is our only enemy, we are lost. Communism is merely one of the instruments used by the real conspirators to frighten us into surrendering our national sovereignty to a world government in which we will be hopelessly outnumbered and outvoted, just as we are now in the United Nations.

Now that the Communists are in ill repute, many of their former internationalist collaborators are repudiating them; but do not be deceived by this apparent change of face.

The threat to America is not from without. No exterior force can destroy us. America can be destroyed only from within. The United Nations, UNESCO, and the Bretton Woods monetary agreements are supplying the tools with which subversives work and the vehicles on which they are riding to power.

The pattern of the international Socialist apparatus is the thing to watch. It is skilled in propaganda and has made terrible inroads in almost every field of communication and opinion-forming mediums or organizations.

The American people have been propagandized into believing that the sole objective of the United Nations is to prevent war and promote peace and harmony among nations; but that is merely

window dressing to cover up the greatest subversive plot in history.

In a well-documented report, the American Flag Committee of Philadelphia, Pa., says:

UNESCO, the United Nations Educational, Scientific, and Cultural Organization, is a subversive association. It is consciously furthering a campaign calculated to pervert the teaching profession in this country, and so destroy the worth and integrity of America's first bulwark of freedom—our tax-supported public schools.

Strong words. But this report, which was carried in the Appendix of the CONGRESSIONAL RECORD—page A6551—is so startling that loyal, patriotic people and organizations, including the Daughters of the American Revolution, have paid for the printing of thousands of copies of this report to warn the American people of the plot to twist and pervert the minds of little children. A card to my office will bring you a free copy of this report.

UNESCO's scheme to pervert public education appears in a series of nine volumes, titled "Toward World Understanding for Kindergarten and Elementary Grade Teachers in Public Schools." These booklets are obtainable from the Columbia University Press, New York; and cheaply priced. Get them and read them.

The system of teaching advocated in these booklets is to capture the minds of little children, even in the kindergarten, to the end they shall be taught the ideal of a central world government, as over against that of our own constitutional republican form of government; that teachers shall constantly stress the opposite of the family teaching of loyalty to our American ideal and allegiance to our beautiful stars and stripes, substituting for it loyalty to the Communist world government of the United Nations and allegiance to its spider web banner.

UNESCO plans to make war upon the ideals of patriotic national devotion which it sees as infecting our children in the home and community. American history must be suppressed. The patriotic spirit in our children is to be thoroughly emasculated.

Teachers are encouraged to organize political pressure groups, and—in the manner of a trade union—to demand teachers' and children's rights. An attempt would then be made to legislate these rights, prepared in treaty form, which, with the approval of the Senate and signature of the President, would become the supreme law of the land, similar to the United Nations and the Atlantic Pact. Page the ghost of Hitler's youth movement.

UNESCO would intrude upon the sanctity of the home. Booklet VI contains samples of the type of sex education UNESCO proposes for the teaching of children between the ages of 6 and 13. A sense of propriety prohibits quoting the less modest, but here are a few of the suggested questions to be explored by the teachers: (a) Are there devices for limiting the family? (b) What are the feel-

ings of pregnant women? (c) Do parents undress before the child? (d) What is the child to be taught about where babies come from?

One cannot help but wonder if this is what the American parent wishes his children to be taught between the ages of 6 and 13 in our tax-supported public schools. If you do not, you had better investigate how much of this propaganda is already being used in your schools.

It is well to remember: We are the only country in the world which embraces the internationalist idea; all other nations are intensely nationalist; Britain and Russia most of all.

Internationalism is a conspiratorial device to destroy us. Show me an internationalist, and I will show you a potential traitor to the United States.

Appended is a news article from the Washington Times-Herald of Washington, D. C., which carries a timely warning to all patriotic American women:

WOMEN WARNED ON LENDING NAMES TO RED CAUSES—STUDENT OF PROPAGANDA TELLS GOP LEAGUE HOW COMMIES ABUSE NAIVE GROUPS

(By Vylla Poe Wilson)

American women leaders who lend their names and those of their organizations to plug organizations and movements, flavored with international socialism and such like may not know what they are doing, Mrs. Henry Deland Strack, of New Jersey, who has made an intensive study of propaganda in textbooks and in other forms, pointed out at the meeting of the District of Columbia League of Republican Women at the Mayflower yesterday.

"I prefer to believe that these women are naive—but remember Westbrook Pegler says naive is a French word for dumb," said this good looking housewife who is on a crusade against subversive propaganda.

"In regard to the General Federation of Women's Clubs," she said, "I have here a pamphlet put out by the National Conference of Christians and Jews—the organization in the forefront of the brotherhood activists, chosen by the State Department to indoctrinate German youth—which recommends for children a book by Howard Fast, who served a Federal jail sentence, and films by several of the Hollywood Ten."

FOREWORD BY EX-HEAD OF WOMAN'S FEDERATION

"This booklet, Religious Values for Youth carries a foreword by Mrs. La Felle Dickinson, then president of the General Federation of Women's Clubs. And, of course, in the testimony before the Congress on world government you will find the Young Women's Christian Association, the General Federation of Women's Clubs, and the League of Women Voters putting their organizations on record in favor of world government. At the American Association of the United Nations I found the photograph of Mrs. Hiram C. Houghton, president of the General Federation of Women's Clubs, as one of the radio speakers plugging their line. I prefer to believe that Mrs. Houghton, like so many of these women, is just naive, just dumb, and inclined to be meddlesome."

Mrs. Strack said that Communists never openly advocate communism in this country but carry on their propaganda for international socialism which really is not any different from communism.

"International socialism," she insisted, "will be brought about by the six Marxist abolitions—abolition of existing government of ownership of property in land, of inheritance,

of the family, of nationalism (patriotism), and of religion. Within that framework, then you can judge the program and the degree of socialism included in the program of many national organizations, the self-styled opinion-forming agencies."

STATE DEPARTMENT ACTION DEcriED

She also decried the habit of State Department and other Government departments of consulting the heads of such organizations and soon "the official administration policy is being peddled to the voters down through the State and local levels of the national organizations memberships."

"I have found," the speaker declared, "the National Education Association acting as the political arm of the new Fair Deal crowd in the public school system," she said in reporting on her investigations.

"The pattern of the international Socialist apparatus in this country and the terrible inroads it has made in almost every field of communication and opinion forming is apparent," she concluded "It is up to you Republican women to read the magazines and books that still manage to get printed which expose this process. I hope you will challenge our cultural managers as they go about obliquely performing the revolution without violence. It is really up to Republican women if you do not want this country sold down the ideological river. Time is running out. Don't let these United States go by default."

OTHER ORGANIZATIONS ALSO ARE LISTED

Besides the organizations already mentioned, others pointed out by Mrs. Strack are the National Citizens Political Action Committee, the National Congress of Parents and Teachers, the American Association of University Professors, the American Home Economics Association, the Southern Conference for Human Welfare, the National Farmers Union, the Consumers Union, Jo Davidson's Independent Citizens Committee of the Arts, Sciences, and Professions.

The speaker was introduced by Mrs. Howard Coffin, national Republican committeewoman from the District, who pointed out that there are 47,000 public-relations and opinion-forming employees on the Government payrolls telling people how to think.

Spain, the Indispensable Ally

EXTENSION OF REMARKS OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article from the Freeman magazine.

There being no objection the article was ordered to be printed in the RECORD as follows:

SPAIN, THE INDISPENSABLE ALLY

(By Hoffman Nickerson)

(Many people who welcomed alliance with Communist Russia on purely military grounds now oppose an alliance with Fascist Spain on political or religious grounds. Major Nickerson maintains that a Spanish alliance is as vital to the free nations today as was alliance with Soviet Russia in 1941.)

In allying itself with Spain the United States would exchange a militarily hopeless position on the continent of Europe for a very strong one.

At the bottom that is all there is to it. With the help of comparatively few American troops the chances of a successful Soviet invasion of the peninsula would be extremely small. Moreover, the country is large enough to serve as a base from which counterattacks could be launched when circumstances permitted. Finally, a strong Spain would give us a secure entrance into the Mediterranean, the great inland sea which bounds all southern Europe and nearly all northern Africa, and is an ideal theater for sea and air power.

If our present policy of stationing American troops in continental Europe can make sense at all—and that is a big if—it can do so only if centered on Spain. As it stands it is only a sham, an invitation to military disaster and an attempt to justify Government spending in order to keep Truman and Acheson in power.

It is a sham because we and our allies under the North Atlantic Treaty do not now have and are not even planning to raise armies and air forces powerful enough to hold any appreciable parts of Western Europe north of the Pyrenees against a determined Soviet attack. Only a delaying action could be fought behind the Rhine which is the only serious military obstacle now available to us. As soon as the Rhine was forced we could hold only peninsulas like Denmark and Brittany and perhaps a redoubt in the French Alps. Since these areas are too small to be militarily important, the real problem would then be to hold the Pyrenees and behind them to organize Spain and Portugal as our continental European base. Obviously this could be done more easily before rather than after the shooting has started.

These elementary facts of military life have been somewhat blurred in the public mind by the organized lying known as propaganda. The trick has been to talk about how nice it would be if we could hold the Rhine and even the Ruhr—although for a considerable time we shall not have a dog's chance of doing so.

Nevertheless, anyone who habitually reads the headlines in a first-class newspaper knows that our high command—the Pentagon, if you prefer—has long been pressing for a military understanding with Spain. If the present heads of our Defense Department thought that we had even a moderate chance of success in Western Europe without Spain, then they certainly would not oppose the strong anti-Spanish feeling of the present British and French Governments and of our own State Department. After all, the Chiefs of our armed services have not recently been conspicuous for resisting political pressure. That they have stood up in the Spanish case is good evidence that the strategic weakness of our European position without a Spanish alliance is too alarming to be overlooked. Probably it would be hard to find a group of educated, professional fighting men anywhere who, if speaking frankly and in private, would not agree.

Indeed it is an open secret that some of our most intelligent high-ranking officers privately agree with ex-President Hoover that we should plan only for hemispheric defense and wait for the Red Empire to blow up from internal strains which would increase if that Empire attempted further territorial expansion. This, however, is by the way.

OUR WEAKNESS IN EUROPE

Space permits only very brief analysis of the military weakness in our present European position. An obvious point in that of

numbers Britain's former Defense Minister Shinwell said at Ottawa recently that the U. S. S. R. has 215 divisions of which at least 70 are deployed against the west, and the Russian forces are growing in power and numbers. The Red Army is particularly strong in armored divisions. There are also about 60 satellite divisions. By contrast the much publicized Eisenhower army exists chiefly on paper. Hanson Baldwin, the distinguished military editor of the New York Times, recently wrote that if all the present North Atlantic Treaty powers except Greece and Turkey fulfil their entire military programs by the end of 1951 there may be 6 American and the equivalent of 17 West European divisions available for the vital sector between the Alps and the North Sea. Since that sector is about 400 miles wide, if we assume a full divisional strength of 15,000 each and if we calculate defensive density in an old-fashioned way, there would be less than 1 man for each 2 yards of front, including reserves. Including nondivisional combat troops, there would certainly be not much more than one man for every 2 yards. In 1914 such a front would have been as thin as tissue paper, and everyone knows that the multiplication of planes, tanks, and other present-day military instruments has greatly strengthened offense as compared with defense. Moreover, some western units might well be cut off and militarily destroyed before they could cross the Rhine.

The French hope to have five more divisions by the end of 1952. In 1940 they had more than a hundred. In the matter of tactical aviation, all military authorities seem to agree that in tactical planes we would be heavily outnumbered.

That so-called strategic, that is, long-range, bombing could prevent a westward advance by the Red army has rarely been maintained since Korea. Moreover the German generals who fought on the eastern front during World War II all say that attacks against the communications of Russian forces were not as effective as they would have been against western armies because Russian soldiers are accustomed to hard conditions and habitually lived off the country.

By destroying the bridges over the Rhine and destroying or seizing as many of the local river craft as we could, we might gain a breathing spell. It is worth remembering, however, that throughout military history river lines have almost never been long and successfully held against determined opponents who approached on a broad front. This was true over and over again in World War II. The Volga at Stalingrad is no exception, for the Germans reached it only at the tip of a deep and narrow salient.

The critical stage is seldom the original crossing; advanced elements almost always get across. Then follows a race of reinforcement, with the defender trying to wipe out the attacker's footholds and the attacker trying first to hold them and then to break out into the open. Air power and large airborne forces like those of the Soviets increase the chances of the offensive. During World War II even without airborne operations the Red army scored a series of striking successes in crossing rivers. Lt. Gen. Sir G. Le Q. Martel, who was the chief of the British military mission to the U. S. S. R. in 1943, says in his book, *Our Armored Forces*, that the Soviet military engineers were extremely skillful in organizing river crossings, building a number of bridges across the Dnieper at points where that river is 1,500 feet wide in an average of only 4 days per bridge. Some of their bridges carried tanks.

SPAIN IS DEFFENSIBLE

All told, therefore, Eisenhower's staff can hardly be planning for more than a brief stand behind the Rhine. There is no other continuous natural obstacle between the Rhine and the Pyrenees.

On the other hand, the Pyrenees are exceptionally formidable. Considerable mountain ranges are serious military obstacles because the wheeled vehicles essential to large-scale military transport can cross them only on prepared roads, caterpillar-tracked vehicles are often almost as much restricted, and even small parties of athletic and lightly burdened men on foot can cross only at comparatively few additional points. Also the few roads across a big range run for miles through thinly inhabited country where shelter and appreciable reserves of food do not exist, whereas in civilized countries great river valleys have dense populations, developed road systems, and abundant food and shelter.

The Pyrenees are almost ideally suitable for a modern defense in that the coastal strips at either end of the range are extremely narrow, and four out of the five roads which cross the mountains themselves do so close enough either to the Bay of Eusey or the Mediterranean to permit not only land planes but also carrier planes easily to join in defending them. Flying eastward from the bay, the pass of Roncesvalles is only 35 air miles from tide-water, the Somport 74, and the Poutalet 79. For 41 air miles westward from the Mediterranean coastal shelf there is no road until you come over the Cerdagne, the one pass over the chain with any breadth to it. Over the 13 miles between the Poutalet and the Cerdagne, the only road follows the difficult Port de Navia Pass.

Even if the Red invaders could force the Pyrenees, more than a thousand air miles from the Russian border, they would find their geographical difficulties only beginning, for the peninsula is crossed from sea to sea by a succession of transverse ranges.

Also, we saw at the beginning of this article that Spain commands the western entrance to the Mediterranean which with its islands is an ideal theater for sea and air power. Along that inland sea we have access to Greece, Turkey, and the oil deposits of the Near East. From its eastern end our planes can threaten the Soviets' vulnerable southern flank, the Caucasus and the Caspian oil region up the Volga. The Mediterranean is also a barrier against land invasion of north Africa.

Without a strong Spain astride the Straits of Gibraltar our organized bases in the western and southeastern Mediterranean area must be confined to Africa where we would suffer various disadvantages. East and west ground communications there are difficult north of the Sahara and nonexistent elsewhere. The north African Moslems, like their coreligionists in other regions, have been deeply offended by our policy toward Israel. Also, as General Fellers recently noted in the Freeman, we would be politically whipsawed by the necessity for taking sides between their nationalist movement and the imperialism of France and Britain.

Turning now to the human factors of Spain, the average Spaniard is conspicuously tough and brave. Although the Spanish armed forces lack much of the expensive military equipment which only the richest nations can afford on any scale, their senior officers are veterans of the long and ferocious civil war which ended only a few months before World War II began. As a result of that civil war the Spanish Government is probably more anti-Communists than any other in the world. The local Communist Party is outlawed and exists only under-

ground in hunted fragments. We may contrast France and Italy where Communists are a large and powerful minority, so that extensive sabotage is to be feared.

Even if geography and lack of military numbers did not make a ground defense of European France against a serious attack impossible, it would still be absurd to base our European policy on a country where both expert and general public opinion does not believe in the urgency of preparedness. Even those who, like the present writer, have always believed in the future resurrection of France must face the fact that not only the average Frenchman but also the French Military Intelligence Service firmly believes that the Soviets will not attack westward. If the French are correct, then our whole policy needs revision.

In Spain the political atmosphere is wholly different. General Franco and his government having seen communism in action on their own soil, fully appreciate its menace. During World War II Count Jordana, then Spanish Foreign Minister, repeatedly warned the western governments of what they might expect from Moscow, and time has proved him all too true a prophet.

THE ARGUMENTS OF PREJUDICE

To refute the usual arguments against a Spanish-American alliance it is hardly necessary to do more than state them. When it is said that Franco's officials are corrupt, we should remember that our State Department pinks said the same thing about our friend Chiang Kai-shek—for the benefit of the Chinese Reds now killing our men in Korea. If the charge against Spanish officialdom be true—and on this sinful earth a certain amount of corruption exists everywhere—then that is only an argument for adequate American supervision of what is done with whatever dollars and materials we may send.

Since most of those who complain that Franco is a dictator approve of our supporting Tito, who is not only a dictator but a Communist dictator, it is enough to quote, as W. H. Chamberlain recently did in Human Events, Our Lord's own words: "Scribes and Pharisees, hypocrites who strain at a gnat and swallow a camel."

The real reasons why from 1945 until recently the Spanish Government was practically boycotted throughout the west have one thing in common: none of them has anything to do with either military or anti-Communist considerations. At bottom all are due to political or religious prejudices. Spain has been and is politically Roman Catholic, and in accordance with the inflexible Spanish pride and with the absolute character of Spanish thought her governments have been Roman Catholic in a rigid and uncompromising way. To many English-speaking Protestants the legal disabilities still imposed upon the negligible handful of Spanish Protestants are provocative. These disabilities strengthen the inherited Anglo-American habit of thinking about Spain in terms of the Inquisition and the Armada of 1588—neither of which is a really live political issue. During the Spanish War English Socialists of the Labor Party strongly sympathized with the anti-Nationalist side, and an appreciable number fought on that side. Atlee himself went to Spain and is said to have been photographed giving the clenched-fist Communist salute which was customary throughout the anti-Nationalist army.

For centuries France and Spain were unsympathetic rivals, and throughout the unhappy Third French Republic their traditional antagonism was exasperated because most French politicians were so anticlerical that they made it their chief business to abuse the traditional religion of both coun-

tries. Since the same French politicians naturally sympathized with Spanish Reds and Pinks, during the civil war while nationalism was winning in Spain and while the popular front was busily preparing the catastrophe of 1940, feeling on both sides of the Pyrenees ran higher than ever.

Readers may judge for themselves whether religious memories or sectarian political prejudices are more important than military necessities.

To say that our leaders should try hard to make a firm alliance with Spain does not mean that they ought to throw themselves into Franco's arms and do whatever he might suggest. Not being a fool, he might well prove a shrewd bargainer. In this article we need not consider what concessions our negotiators might reasonably ask in return for substantial American assistance.

Meanwhile Truman and Acheson have already delayed so long before beginning to make friends with the Spanish Government that we may wonder whether their \$65,000,000,000 military budget is intended to support any real defense of Western Europe. If that defense is not based upon Spain it will be worthless.

Smear Tactics Cannot Beat Senator McCarthy's Record

EXTENSION OF REMARKS OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article by Constantine Brown.

There being no objection, the article was ordered to be printed in the Record, as follows:

CONSTANTINE BROWN SAYS SMEAR TACTICS CANNOT BEAT SENATOR MCCARTHY'S RECORD

(What do the people of Wisconsin think of Senator McCarthy? Will he be reelected to his seat in the Senate?)

(Constantine Brown, Washington columnist, visited Wisconsin and canvassed the voters. Here are his answers to the foregoing questions.)

(By Constantine Brown)

"Do you know Joe?" "How is he doing?" "He's sure put the fear of God in those Commies in Washington." These are the questions which any visitor to Wisconsin who has a District of Columbia tag on his car is bound to hear as soon as he reaches the rural sections of the State.

According to some old timers Joe McCarthy's popularity exceeds by far that of old Bob La Follette. His bare-knuckles fight against the Communists in Government; his relentless campaign against "Red Dean" Acheson have won to his side even those who in the past wondered about their wisdom of sending an inexperienced young judge, 37 years old, to represent this farm-industrial State in the United States Senate.

Not only the Democrats, but also the liberal organizations in New York and Chicago who bitterly resent McCarthy's campaign against their favorite pinks in Washington, consider his defeat a must. They will spare neither money nor effort to eliminate him from political life in 1952.

The Republican organization in Wisconsin is in a better shape than many other States in the Middle West. McCARTHY's opponents in Wisconsin are principally the liberals in Milwaukee and Madison. Their relatively small number is compensated by loud noise and beaverlike activities.

Since denunciations by word of mouth or in print is not sufficient to defeat Joe, the master minds who had engineered the defeat of Burton K. Wheeler in Montana in 1946 and tried to apply the same methods in 1950 against Senator Pat McCARRAN in Nevada, are now trying their hand in Wisconsin.

The talk in Madison and Milwaukee is that more than \$100,000 has been sent from outside the State to beat McCARTHY in the primaries. His most embittered opponents admit that he cannot be defeated by any Democrat in the 1952 elections.

The selection of the anti-McCarthyites to fight the champ is a local politician by the name of Leonard Schmidt, a good speaker and ruthless campaigner. Although he has not filed yet he is already campaigning by using material provided for him from headquarters outside the State.

This material contains the well-known charges that McCARTHY is smearing the character of innocent people in Government without any regard for truth. Because the majority of the large local newspapers carry mostly the attacks against McCARTHY from top administration leaders such as President Truman, Secretary of Labor Maurice Tobin and so forth, few, if any, know that some eight individuals charged by McCARTHY before the Tydings committee have been already removed from the Government's payroll as bad security risks.

The primaries in Wisconsin are open. All citizens can vote. And this is the strongest hope of McCARTHY's enemies to defeat him. His Republican opponent, selected by the "liberals," has already started to repeat persistently the accusations already heard over the country on the radio and in newspapers.

The appearance of Mr. Schmidt in the political arena will induce other Republican hopefuls to try their luck at the primary polls. Among those is a prosperous farmer, the former State Senator Dempsey, who has already filed. His platform is not a denunciation of McCarthyism. He says that it is high time that the State of Wisconsin be represented in the United States Senate by a real, experienced farmer.

Unless the vast amounts of money to be spent in the campaign have an effect, there is little likelihood that a smear campaign will have any success. McCARTHY's popularity is growing by leaps and bounds, particularly in the agricultural areas where everybody likes that "crazy Irishman, Joe."

The attendance at the meetings where he speaks is unprecedented in the history of this State. When he spoke on September 8, at Spring Valley, a small community of less than 700 people, he had an audience of over 2,000. He spoke the same evening at Alva, where the population does not exceed 600 inhabitants, before an audience of upwards of 2,500 citizens.

McCARTHY is not a particularly powerful orator. His magnetism and unquestionable ring of sincerity attracts the crowds and they believe him. When he spoke at Boise, Idaho, August 29, he had a greater crowd than Boise had seen even in the heydays of William Borah. Because of the rain the meeting took place in the largest auditorium in the city. Some 3,000 were packed in, and a great overflow of people were listening to his speech through loud-speakers in the streets. When he left at 1:30 a. m. there were some 700 people at the airport to bid him Godspeed.

Two days earlier, in Seattle, the largest hall had to be closed a half hour before the

speaking time because it could hold no more people. The audience had begun to arrive for the 8 o'clock speech as early as 5 in the afternoon. The overflow stood in the rain in the streets to listen.

And so everywhere on the west coast where McCARTHY appeared; in Spokane the house was sold out 3 days before the meeting, and in Portland, Oreg., the lecture hall was packed to the rafters, even though the Governor's administrative assistant expressed his disapproval at McCARTHY's appearance in that city. The Governor himself was on the platform, however.

McCARTHY's supporters in Wisconsin do not worry about his election. They know that their man can do it. But they are somewhat uneasy about the primaries not because of the smear sheets and other contraption which will appear at the psychological moment, but because sometimes money can talk louder than the best arguments.

McCarthy Will Beat Down Commies

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Pittston (Pa.) Sunday Dispatch.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

MCCARTHY WILL BEAT DOWN COMMIES

United States Senator JOSEPH McCARTHY will not be kicked out of the United States Senate by the enemies he has developed through his fight on Communist scum in our Government. Don't be surprised if the Democrats get more hurt in the ouster attempt on McCARTHY than McCARTHY does.

All this drum beating about the defeat of ex-Senator Millard Tydings, of Maryland, being due to Senator JOE McCARTHY sticking his nose into a Maryland election and being unfair to the Tydings lug seems to me to be so much hogwash.

The same people who are letting off propaganda barrages about the alleged injustice of Tydings' defeat never let out a peep about New York pro-Communist fronts that have reached out into other States to support candidates sympathetic toward the Communist termites. Neither do those bleeding hearts give the people of Maryland credit for having studied the open record of Mr. Tydings as a friend of the Commies and booted him out on account of it. Isn't it true that Mr. Tydings himself once attributed his defeat to the Catholics of Maryland? Now McCARTHY is dragged in, because the pinks think they can smear him.

The drive on Senator McCARTHY is part of what has been going on among the cock-eyed liberal set since Franklin Roosevelt and his wife put the welcome mat out for the Communists. Anyone who dares turn the spotlight on people who have been friendly to the Communists is abused. General MacArthur is another who has been abused by these left-wingers. However, the same cockeyed crowd who abuse anti-Communists can find all kinds of excuses for Alger Hiss, Dean Acheson, and such people,

Bogey of McCarthyism

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Springfield (Mo.) Leader and Press.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOGEY OF MCCARTHYISM

Bleeding heart liberals in the East are getting all hot and bothered about a bogey they call McCarthyism. What is this headless horseman of politics?

In torrid terms the junior Senator from Wisconsin is accused of smearing some of the brethren by throwing scarlet paint on them. But the protest seems to betray symptoms of a deadly malady that afflicts the body politic today.

For a good many years this country has suffered from a rash of radicalism on the left. Writers and speakers outdid themselves in denouncing Republicans, reactionaries, economic royalists, employers, and every man who owned more than one automobile, as public enemies. In all those years, until Joe McCARTHY came to the fore, the whole chorus was on one side. There were no extremists on the right. Now that one has arisen who picks up the brickbats and hurls them back, not always in a Chesterfieldian manner, should not be matter for surprise and hurt feelings, particularly by anybody right of center.

Men like Herbert Hoover, Tom Girdler, Senator Taft, and Secretary Forrestal were smeared with glorious abandon and the middle-of-the-road journalists smiled tolerantly on what they said was mere exuberance of free speech. But when one man comes along and uses a similar weapon of offense against Alger Hiss, Owen Lattimore, Philip Jessup, Henry Wallace, et al., cries of anguish arise. Free speech is being prostituted, we are told, and men denied their sacred right to agitate for the overthrow of republican government.

It's too much to expect that one side will continue uniformly to be gentlemen and let the other side do all the dornick flinging. The reason that capitalism and free republican government have been losing the battle of the century is that their advocates have tried to fight emotionalism with logic, demagoguery with statesmanship. They have couched their appeal to the judgment of posterity, while the roughnecks of socialism were using those raw and primitive come-ons that get votes.

Senator McCARTHY is not a man of judicial temperament—at least not that of the judge who said the other day that he was not worried over how many guilty felons escaped punishment so long as all the innocent went free. McCARTHY lacks the cold, detached philosophic mind. He is something of an extremist. But we need men like him in this mortal crisis of freedom, to balance the political teeter board that so long has been weighted down on the left. And besides, McCARTHY has been right more often than wrong. He was proved to be right about Lattimore. No one seriously doubts that he was right when he charged that the executive departments at Washington had a heavy

infiltration of Reds and homosexuals. And Philip Jessup's reply to the charges made by McCarthy and Harold Stassen is on its face a tissue of mental evasions.

Also McCarthy may be applauded for the enemies he has made, such as Drew Pearson, Senator Benton of the smelly team of Benton and Bowles, The Nation, Daily Worker, and Pravda.

The New York Times sent a veteran news analyst to Wisconsin to verify reports that McCarthy would be unseated at next year's elections. The report was that the voters of Wisconsin like McCarthy, consider him a winner, and will reelect him in 1952.

McCarthy should represent to Republicans a fighting type of politics the party has not used in a presidential election for a long time. Senator DIXSEN beat the veteran Scott Lucas in Illinois last year with a two-fisted, eye-blackening, name-calling campaign of the same type as his opponent's, only better. That is the sort of campaign, and the only sort, that Harry Truman fears for 1952. This is a time to bar no holds. For four times the New Deal-Fair Deal Socialists have won with the tactic, "The end justifies the means." That is McCarthy's tactic, and a dash of it may well be recommended as a new seasoning for Republican leaders, who for so long have lost by default.

Former Moscow Pastor Backs McCarthy and MacArthur Views

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Catholic Herald Citizen.

There being no objection, the article was ordered to be printed in the RECORD as follows:

FATHER BRAUN, FORMER MOSCOW PASTOR, BACKS MCCARTHY AND MACARTHUR VIEWS

GREEN BAY.—Senator McCarthy's charges that Communists have infiltrated into the Government are entirely defensible, Father Leopold Braun, A. A., told members of the Green Bay lecture forum here Sunday night. For 12 years the American pastor in charge of the Church of St. Louis in Moscow, Father Braun said:

"I happen to know some of the men named by McCarthy personally and of the existence of documentary evidence against them, and from a purely patriotic and not political point of view, the Senator's position is entirely defensible."

In the question-and-answer session, Father Braun defended General MacArthur's campaign plan in Korea. He said he believed that the war in Korea was deliberately stopped a year ago when the military objectives of MacArthur were about to be completed. But the Government thought that this would displease the U. S. S. R. and lead to world war III. "I'm sorry to say that the foreign policies of His Majesty's Government (England) had a lot to do with the stalemate in Korea."

Father Braun said that MacArthur's campaign theory in the original sense was the only way we could bring about victory in

Korea because at that time MacArthur knew that Russia would not attack.

Diplomatic relations with Russia should be continued but only on an absolute reciprocity basis, Father Braun said. "At present, all the privileges of diplomatic immunity are accorded to the U. S. S. R. while we are looked at as scum of the earth in the Soviet capital."

He said several Russian organizations operating under harmless names are nothing more than divisions of the secret police with the sole purpose of obtaining secret information in the United States.

Present curbing of Communist infiltration in Government is in contrast to the situation several years ago, Father Braun said. He pointed out that Gerhart Elsler, a known Communist, was not deported until the mass of evidence against him had reached tremendous proportions.

Prior to this time, he said, "the wife of a certain President wrote a letter to the Secretary of State asking clemency for Elsler so he could continue his work."

He also charged that an ex-President had told the FBI, "Don't touch it," when confronted with a dossier containing the damning evidence on Elsler.

The real reason the Russian people do not rebel, Father Braun said, is the ubiquitous vigilance of the secret police operating in three spheres—interior, transportation, and border. He described Russia as a "hermetically sealed" country but he expressed the belief that the people are beginning to awaken to the fact that they were not living in a paradise and they are demanding more information about the way of life outside of the country.

He described the transfer of 1,750,000 Polish people and 2,000 Spanish young people to Russia, where they were forced to accept citizenship with antedated papers. This prevented their being repatriated to their own countries, "a case of genocide worthy of U. N. attention, but try to get it on the docket," Father Braun said.

Nikolai Zarubin is now Russian Ambassador to the Court of St. James, where he was received with open arms. But this same man played a very, very black and despicable role as a diplomat while Soviet Ambassador to Ottawa, where he directed the entire atom spy ring of North and South America."

More recently, Zarubin was one of four delegates of Russia to the San Francisco Conference, where the Japanese Peace Treaty was signed, said Father Braun.

The speaker predicted that one Malenkov would succeed Stalin in fact, although Molotov may be the figurehead dictator.

Communist Infiltration in the State Department

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD articles in the Washington Star by David Lawrence on Communist infiltration in the United States Government.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

OFFICIAL REPLY CALLED MISLEADING—RECORDS OF TESTIMONY MADE BEFORE CONGRESSIONAL COMMITTEES CONTRADICT SNOW'S STATEMENT ON STATE DEPARTMENT REDS

(By David Lawrence)

To what extent have Communists and Communist sympathizers infiltrated the United States Government and particularly the State Department in recent years?

An answer to this question is attempted in a speech by Chairman Conrad E. Snow of the Loyalty Security Board of the State Department. He has made some very significant statements which unquestionably will attract the attention of congressional committees as they examine further what appears to be an official reply to various charges leveled in recent months.

The first point that strikes the eye is the argument that, even if there were Communists or sympathizers in the State Department, they did very little harm at most. Here is the exact language by Chairman Snow on this point:

"I can say confidently that there are no known Communists in Government. If there are any secret Communists—Communists who join no Communist fronts and speak no Communist sentiments—of course I cannot say, for they are not known.

"The Hiss case and the case of Judith Coplon in the Justice Department have done more harm in terms of public confidence than any harm Hiss or Coplon ever did in the delivery of classified papers. Both worked in absolute secrecy—their best friends were ignorant of their acts. Neither would have been employed by Government for a day after their acts were discovered. But a swallow does not make a summer—neither do these two cases make out an infiltration of Government by Communists."

The foregoing assertion will be challenged, and, in fact, is contradicted by records of the testimony made before congressional committees.

Thus, the declaration that Alger Hiss, for example, would never have been kept in Government employ for a day after his acts were discovered, is not borne out by the testimony given by Whittaker Chambers, a confessed Russian spy, who has told congressional committees that as early as 1939 he notified the State Department that Hiss had given him secret papers. The record shows that Hiss not only continued in the State Department for years afterward, but that he played a very important part in the preparations for and in the discussions which went on at the Yalta Conference as recently as 1945.

The statement by Chairman Snow says also:

"Since December 17, 1947, when the President's loyalty program was implemented by directive of the Loyalty Review Board of the Civil Service Commission, the Loyalty Security Board of the State Department has had before it over 500 cases of State Department employees who have been investigated for loyalty by the Federal Bureau of Investigation—the FBI—and not one case has been found of a present Communist working in the State Department.

"Over that period eight employees have been held to be security risks, but not one of those admitted present membership in the Communist Party, nor was there evidence of present membership."

A reading of the foregoing statement by those who have not followed closely the controversy over the loyalty program would

lead to the impression that infiltration in the State Department hasn't occurred because no present Communist can be found. The strongest argument of the anti-Communist group in America has been that former Communists either stayed on in Government employ or were permitted to resign without an explanation of what harm they had done while in Government employ.

In the statement above quoted, the words "present Communist" or "present membership" were not underlined by the speaker, but there are many observers who insist that the presence of former Communists today in highly confidential posts is bad security. Chairman Snow reveals that since 1947 about 40 other employees have elected to resign during the process of investigation and adjudication of loyalty." He adds:

"What might have been found in their cases, had they gone to hearing, of course, I do not know. But this small number—less than 50 in all—out of a department of 94,000 employees—who have either been held to be security risks or who have for one reason or another desired not to face investigation, does not indicate any noticeable infiltration of Communists in Government."

What is the importance of the word "noticeable"? It will be noted that Klaus Fuchs, who was cleared through a faulty system in which the State Department shares responsibility, stole American atom-bomb secrets. Yet it can be said he is just one employee out of the thousands of employees of our own and foreign governments who have dealt with classified information in recent years. To use 50 in ratio to 94,000 is misleading in itself. Not all the 94,000 employees of the State Department have anything to do with confidential information. It is a rather small group which has access to secrets, and there is no way of knowing whether the 50 who have either been dismissed or resigned had such access. The public is entitled to information on this point as well as to information as to just what part was played by Alger Hiss and others who are admitted now to have been bad security risks.

STETTINIUS NEVER LEARNED FACTS—HOW HIGH UP IN THE STATE DEPARTMENT DID THE FBI REPORTS ON RESULTS OF EMPLOYEE LOYALTY INVESTIGATIONS GET?

(By David Lawrence)

What happens to information on loyalty which is communicated by the Federal Bureau of Investigation—the FBI—to the State Department?

This question is raised because of the statement just made by Chairman Conrad E. Snow, of the Loyalty Review Board of the Department of State, who says publicly that Alger Hiss would not have been kept in Government employ 1 day after his acts were discovered.

The same State Department spokesman on loyalty matters says that both Alger Hiss and Judith Coplon "worked in absolute secrecy—their best friends were ignorant of their acts."

But the FBI wasn't ignorant of those acts. It promptly prosecuted Judith Coplon, and it also laid before the State Department certain information about Alger Hiss which the Department officials chose to disregard.

But how high up in the Department did the FBI reports ever get? It is plain from a reading of the book by the late Edward R. Stettinius, Under Secretary of State and later Secretary of State, that he evidently did not know what the FBI reported. In his book dealing with the Yalta Conference—published in November 1949 by Doubleday & Co.—Mr Stettinius pays tribute to the work of Alger Hiss and says:

"I never heard of any questioning of Mr. Hiss' loyalty from any one inside or outside of the State Department or from the FBI during my term of service in the Department."

Mr. Stettinius became Under Secretary in September 1943 and Secretary of State in November 1944. He resigned in June 1945. That's a long period of time during which FBI information apparently never got to the Secretary of State.

It is known that in 1939 Whittaker Chambers, confessed Russian spy, went to Adolph Berle, Assistant Secretary of State, and told him about the work that Hiss had done in our Government as a Russian agent.

It is known that in the latter part of 1941 and early 1942 the FBI obtained the notes of Mr. Berle and gave the State Department whatever information it had about Alger Hiss.

It is known that in March 1945, just after the Yalta Conference—and before the United Nations Conference at San Francisco, in which Alger Hiss played an official part—the FBI transmitted to the State Department a comprehensive report about Alger Hiss that created quite a stir among some officials in the Department.

Now Chairman Snow, in his public statement, says that the chief damage done by the Alger Hiss case was in undermining the confidence of the public in the State Department, and he places as secondary the harm that Hiss did in the delivery of classified papers.

Evidently Chairman Snow has not given weight to the opportunities which Alger Hiss had to communicate directly or indirectly to the Russians what he knew of American policies and plans. For Mr. Stettinius reveals in his book that he "reviewed" with Hiss and only two other advisers certain questions for purposes of presentation to President Roosevelt at Yalta. Critics of the administration in Congress claim that America was "sold down the river" at the Yalta Conference.

Among the questions listed by Mr. Stettinius as having been reviewed by him with Alger Hiss were the treatment of Germany, the Polish question, the relations between UNRRA and the Soviet Government, the rights of American representatives on the allied control commissions for Bulgaria, Rumania, and Hungary; questions of oil concessions in Iran, policy in China with reference to Russian influence with the Chinese Communists, the Turkish straits question, and international trusteeships.

Chairman Snow points with pride to the record that since December 1947, "not one case has been found of a present Communist working in the State Department," and asks: "What, then, is all the shouting about?"

Yet in his own public statement Chairman Snow says that between December 1947 and today, 8 employees have been found to be security risks and about "40 other employees have elected to resign during the process of investigation and adjudication of loyalty." He adds frankly:

"What might have been found in their cases, had they gone to hearing, of course, I do not know."

The FBI furnished a file on every one of those cases. When the chairman of the loyalty board in the State Department eliminates 40 loyalty cases because they didn't go to a hearing, does that mean the background of those 40 cases was unimportant?

There is another pertinent fact on which the fullest candor is essential. How much pressure, if any, was put on the 40 loyalty cases to resign? Does the Department do its weeding out by pressure and thus maintain a perfect score, enabling it to say that "not

one case has been found of a present Communist working the State Department"?

The \$64 question, finally, is this: Although in every other important department of the United States Government disloyalty cases have been found and loyalty boards of those departments have recommended dismissals, why has the State Department never found a single disloyalty case that resulted in a formal dismissal?

Plainly Chairman Snow has chosen to give out a part of the story and only the part which in his opinion "does not indicate any noticeable infiltration of Communists in Government."

Dean Acheson

EXTENSION OF REMARKS

OF

HON. JOSEPH R. McCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a letter printed in the New York Times of August 30, 1951.

There being no objection, the letter was ordered to be printed in the Record, as follows:

DEAN ACHESON DISCUSSED—BASIS OF OPPOSITION TO THE SECRETARY OF STATE PRESENTED

TO THE EDITOR OF THE NEW YORK TIMES:

"In Praise of Dean Acheson" was the title you gave to a letter in the Times of August 16, written by Samuel Guy Inman. Since I am a member of the "get Acheson" crowd, an exclusive little group that appears to include four-fifths of the population, I was curious to read what Mr. Inman could find to say in his praise. But I was disappointed. The burden of the letter was that Senator McCARTHY is disgraceful and Mr. Acheson a very brilliant fellow indeed. Few facts were adduced to support either contention.

Mr. Inman, who, according to Who's Who, has been employed as a consultant by the State Department on dozens of occasions over the years, cited the following points in Mr. Acheson's favor.

1. He was well prepared for his task when he became Secretary. Granting that this was true, is it not his record since then that really matters? Many besides Senator McCARTHY feel that Secretary Acheson is the most spectacular failure in diplomacy since Neville Chamberlain. The loss of 600,000,000 people in China and Eastern Europe to Kremlin domination since the end of the war is enough to qualify him for that distinction, even though his responsibility must be shared with President Truman and General Marshall.

U N ACTION ON KOREA

2. He improved the United Nations by his brilliant strategy in getting a vote through the Security Council to send armed forces to stop the aggressor in Korea.

The brilliance of this is debatable. United States forces had already gone into Korea, so the Security Council was presented with a fait accompli. Mr. Inman says nothing about Mr. Acheson's brilliance in persuading President Truman to bypass Congress by calling the war a police action, thereby avoiding the nuisance of asking for a declaration of war as the Constitution requires.

3. The Secretary was called equally brilliant in his leadership in strengthening our relations with the free world through the Atlantic Pact, European Union, etc.

The fact that this free world has been shrinking at an alarming rate during Mr. Acheson's stewardship was not mentioned. The value of the Atlantic Pact to this country will be more apparent when and if General Eisenhower succeeds in his current mission. There will be time enough then to apportion the credit. Just what European Union Mr. Inman is referring to I do not know.

INTER-AMERICAN RELATIONS

4 Mr. Acheson is said to have improved the organization and atmosphere in the Bureau of Inter-American Affairs, as observed by Mr. Inman.

If it could be shown that some South Americans share this viewpoint, the observation would be more impressive.

These items were all that Mr. Inman mustered in praise of Dean Acheson. He neglected some other things for which Mr. Acheson has been praised by his admirers:

His brilliant—nay, total—diplomacy in promising Tito that we would come to his rescue if Yugoslavia were attacked by the Soviets, while gallantly refraining from asking any help from Tito if we should be attacked in Germany.

His throwd bargaining by which he secured the release of Robert Vogeler in the short time of 1 year and for the paltry ransom of \$125,000,000 worth of machinery. When asked by a reporter whether he would try to exchange the Soviet spy Gubitchev for Mr. Vogeler, Mr. Acheson coldly retorted: "We don't do things that way."

His great personal courage in refusing to resign in the face of long and clamorous bipartisan demands that he do so.

MONTGOMERY M. GREEN,

HAVRE DE GRACE, MD, August 16, 1951.

McCarthyism and Trumanism

EXTENSION OF REMARKS

OF

HON. JOSEPH R. MCCARTHY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, October 20, 1951

Mr. MCCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Journal-American of September 21, 1951.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

MCCARTHYISM AND TRUMANISM

President's Truman's manifested decision to make "McCarthyism" an issue in his prospective campaign for reelection can easily prove to be his fatal political blunder.

"McCarthyism," whether one cares for it or not, is neither spontaneous nor an invention of the Wisconsin Senator.

It is, in its particular form, a vigorous protest against Communism in the New Deal—which means Communism in the United States Government.

And if the Communist infection had not existed in the New Deal, "McCarthyism"

could not have occurred as a caustic but salutary corrective.

This is not a matter of mere speculation.

The records of Congressional investigating committees, and even more of Federal criminal courts, have established the essential facts.

To cite the most notable example—

Alger Hiss, who went to Yalta with President Roosevelt, where China was betrayed, and who was Secretary General of the organization meeting of the United Nations, denied under oath any complicity in the Communist conspiracy and was indicted for perjury.

President Truman, instead of respecting the constitutional legal process, attempted to ridicule the action as a "red herring."

But Alger Hiss was convicted and sent to prison.

Did President Truman—under oath to enforce the laws—then recant his contemptuous remark?

He did not!

On the contrary, his Prime Minister, Secretary of State Acheson, unctuously and contumaciously declared that he would not turn his back on Alger Hiss.

And Secretary Acheson remains in Mr. Truman's Cabinet.

Moreover, on how many occasions has Mr. Truman impeded or frustrated congressional investigations of New Deal communism by withholding from Congress reasonable access to public documents, which, no doubt, were prepared in good faith for the public security and afterward, by Presidential order, were secretly sequestered in the New Deal's padlocked files?

The most spectacular instance of McCarthyism in action and its effect upon New Deal political fortunes was that of former Senator Tydings, of Maryland.

Senator MCCARTHY had alleged that New Deal communism perverted our far-eastern policy, causing the loss of China and inviting the Korean war.

Senator Tydings conducted a New Deal investigation, the most revealing feature of which was publication of the suppressed Wedemeyer report on Korea.

The Tydings committee's report was most deservedly called a whitewash.

When, subsequently, Senator Tydings sought reelection, Senator MCCARTHY indignantly took to the stump in Maryland, and Mr. Tydings—after long and distinguished service—was defeated.

A prudent politician sitting in Mr. Truman's place might regard the Tydings episode as premonitory, even if his patriotic impulses did not compel him to respect, at least, the motives of McCarthyism.

He might conclude that this thing called McCarthyism is, in its way, an expression of loyal and offended Americanism, and that it is hardly smart politics to oppose either loyalty or Americanism.

But perhaps this is too severe an observation in President Truman's case.

It may be that Mr. Truman simply has a blind spot in his political vision when communism is concerned; or else, politicianlike, he has a weakness.

Whichever the case, it is reasonable to suspect that some of Mr. Truman's continuing advisers may be primarily to blame for his mistaken and essentially dangerous attitude of supporting communism indirectly by stubbornly and directly opposing militant anticommunism.

For militant anticommunism is the proper definition of McCarthyism.

Was the Decartelization Program Sabotaged?

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Saturday, October 20, 1951

Mr. SABATH. Mr. Speaker, under leave granted me I insert part IV of an article which appeared in the bulletin, Prevent World War III, No. 6, November–December 1950, published by the Society for the Prevention of World War III, New York City, under the heading "Was the decartelization program sabotaged?" as follows:

WAS THE DECARTELIZATION PROGRAM SABOTAGED?—PART IV

IV. BOSCH FRIENDS IN HIGH PLACES—GENERAL WILSON

While the Decartelization Branch was preparing its order against Bosch, company officials were not laggard in defending their interests. They established close relationships with such people as George Erlon, economics chief of the military government in Stuttgart. Through Erlon, the Bosch people were able to learn the details of the order planned against them. They were also intimately associated with Leland Spencer, chief of the bipartite industry and commerce group. Spencer, an influential person in the determination of the steps taken by military government to revive German industry, declared that the Bosch directive would have to pass through his hands before it would be approved.

Spencer was in touch with United States businessmen who gathered material for use by the pro-Bosch officials in military government to defeat the decartelization program. In particular to water down and emasculate the Bosch order. Among the statements gathered, for instance, was one from Charles E. Wilson, former chairman of General Electric, opposing action against Bosch as detrimental to German industrial recovery. This material, gathered by Kenneth L. Meyers in the United States, was forwarded to George Erlon, Württemberg-Baden economics chief, and thus became available to Bosch for use in prosecuting its case before the various appeal boards. Other individuals on behalf of Bosch included Major General Hayes, deputy military governor, who inquired into the nature of the impending action against Bosch and lent encouragement to those who were engaged in whittling down the Bosch directive. Among the most important of these individuals was an ex general of the United States Army, Arthur Wilson.

As early as 1947, Wilson undertook an offensive against the decartelization program and the Bosch order. Ex-General Wilson, a private individual, and in no way associated with the military government, received the support for his activities from every military government official opposing the Decartelization Branch. They included the already well-known Bronson, Hawkins, Wilkinson, Spencer, and others, as well as officials in JEIA (Joint Export-Import Agency) such as George Santry, John French, and other top officers of that agency.

Wilson's actions in the interest of Bosch deserve the closest scrutiny. General Wilson

had met Bronson while the latter was in the service. He came to Germany on his own, armed with an introduction to General Clay. Although Wilson did not talk to Clay about Bosch directly, he nevertheless voiced his opposition to the entire decartelization program. He stated that his efforts on behalf of Bosch had the full support of all of Clay's top lieutenants but did not indicate whether General Clay, himself, had directly encouraged his efforts.

Wilson was vitriolic against the staff of the Decartelization Branch. He denounced their efforts to deconcentrate German industry as a reflection of their belief in the "Morgenthau plan." He argued that Bosch had already been deconcentrated as a result of war action. He disputed the findings of the Decartelization staff on the cartel and monopoly position of Bosch within Germany and justified exclusive trade and distribution practices in the name of efficiency and normal business practice. He demanded that the order against Bosch be rescinded and that the company be permitted to remain intact in the western zones with all of its subsidiaries. He declared that American taxpayers would be burdened if action against Bosch took place and stated that even the Bosch employees would suffer a decline in their standard of living. In all of these arguments, Wilson was echoing the Bosch position which Bosch officials had prepared in their reply to the order to comply with the already emasculated directive signed by Bronson.

However, Wilson's intervention in the affairs of Bosch was not the result of his deep concern for the American taxpayer. As a matter of fact, as early as April 1947, Wilson had entered into business negotiations with the Bosch firm for the exclusive distribution of Bosch products throughout the entire world. The nature of the contract between Wilson and associates and the Bosch combine will be examined in the following section. It is necessary, however, to look at the various intermediary steps undertaken by Wilson prior to the final signing of the Bosch deconcentration order, to grasp the full importance of Wilson's activities on behalf of the Bosch cartel.

General Wilson engaged in numerous conversations with the Bosch officials in the course of 1947. Through Erlon and the industry and commerce group under Leland Spencer, Wilson was informed of the pending action against Bosch. Wilson started his operations by appearing in Berlin and soliciting the support of General Hayes, Deputy Military Governor. He was supplied with an official car, an office, and a secretary. He expressed alarm at the consequences of deconcentrating Bosch to all of the top administrators of military government. He obtained the help of General Hayes with particular reference to the patent provisions of the pending Bosch order, and through General Hayes, he requested that they be changed. He engaged in numerous conferences with Bronson, Hawkins, and Wilkinson on these matters. He also spoke to a number of staff members about the Bosch order, but denied their motives and the purposes of the entire procedure. These conferences between Wilson and the Bronson-Hawkins team occurred periodically over the course of months. It will be recalled that during this period, a draft of the deconcentration order had already been prepared and submitted to Bronson without any action and that the final version accepted by Bronson had been depleted of its vital provisions.

Is it a matter of coincidence that the vital parts of the Bosch order were thrown out on Bronson's instructions at the time when Wilson was conferring with Bronson

and Hawkins? As we shall show in the next section, all of these provisions were of paramount importance in Wilson's business deal with the Bosch company.

The real motives behind Wilson's activities were made apparent when he presented Bronson and Hawkins, during one of his periodical visits to Berlin, with a copy of a draft of a contract between the so-called International Products Trading Co. of Zurich, Switzerland, and the Bosch firm, giving the former exclusive rights to sell and distribute Bosch products on the international market. Wilson requested Bronson and Hawkins to give approval of the contract which had already been, in principle, accepted by JEIA (the Joint Export-Import Agency). These conversations concerning the contract also took place before Bronson instructed staff members of Decartelization to delete or change portions of the original draft of the Bosch order and before Bronson signed the revised draft of this order.

At no time was any member of the Decartelization staff informed by Bronson that such a contract was in existence or being considered by him and Hawkins, or that an agreement had been entered into by a foreign company and a German firm which was subject to deconcentration action. At no time prior to the issuance of the approved draft on Bosch did Bronson consult the legal members of his staff as to the validity of such a contract. Its existence was in effect kept secret by Bronson and Hawkins.

Hawkins and Bronson, after making a number of minor revisions in the contract, gave their approval to the deal, and the contract was forwarded to JEIA, which gave its final approval in July 1948.

Asked to account for his relations with Wilson, Bronson subsequently grew very hazy about his conversations with him. Bronson never questioned the impropriety of a private individual, a citizen of the United States, a former general, representing the interests of a German company before an official agency of the United States Government. In any case he never informed the staff about Wilson's deal with Bosch until the contract was accidentally discovered by a member of his staff who raised the entire issue of the legality of Wilson's actions and the legality of the contract itself.

V. BACKGROUND OF THE IPTC (INTERNATIONAL PRODUCTS TRADING CO.)

It is clear, as Wilson subsequently admitted himself, that his intervention on behalf of Bosch was only motivated by his personal interest. It is also evident that Wilson's activities on behalf of Bosch bore fruit in the revisions in the Bosch order and the Hawkins-Bronson approval of his private deal with Bosch. It may explain the long delay in taking action against Bosch and the lukewarm attitude toward the contemplated action by General Clay.

We can examine, therefore, at this point, the International Products Trading Co. itself and the kind of arrangement it made with Bosch.

The IPTC is stated to have been established as a result of the initiative of two Greek businessmen by the name of the Gherstos brothers. For over 20 years they operated an agency in Greece and other countries for the distribution and sale of Bosch products. After World War II, the Gherstos brothers undertook to reestablish their international connections with Bosch. For that purpose they first approached a certain Colonel Colcaire, assistant military attaché of the United States embassy in Berne, Switzerland. They proposed to Colcaire the reestablishment of an international agency for the distribution and sale of Bosch products throughout the entire world through the

formation of a company under Swiss laws. Colcaire avidly accepted the proposal in which he would have a substantial participation without investing any money, since the Gherstos brothers agreed to supply all the capital.

During these negotiations, General Wilson, at that time vice president of the Trans-World Airlines, made his appearance. It is not clear whether he already knew the Gherstos brothers or was introduced to them by Colcaire. In any case, he agreed to participate in the establishment of the proposed company under the same conditions. Subsequently, Colcaire was eased out of the deal and Wilson became an equal partner in the new company, owning one-third of its capital stock with the money put up by the Greek businessmen. Wilson's share was to be repaid by him out of the future earnings of the new firm.

Wilson immediately took over the assignment of setting up the company and entered into negotiations with Bosch on details of the contract for the exclusive distribution and sale of their products. Wilson, as we already have seen, undertook the job of obtaining military government approval for the deal and sought to interfere in the pending deconcentration action against Bosch.

As a private individual, Wilson was clearly engaged in activities which violated military government regulations. On the other hand, is it not evident that Bronson and Hawkins, in encouraging a private business venture on the part of an American citizen, did not live up to their oath of office?

VI. THE MEANING OF THE BOSCH-IPTC CONTRACT

The contract signed by Bosch and the IPTC, and approved by JEIA in July 1948, conveyed on the IPTC exclusive rights to sell and distribute Bosch products in the international market. When its existence was finally brought out into the open through the accidental discovery by a decartelization staff member, it was characterized as illegal and in violation of British and American laws on decartelization. In addition, staff members declared the new Swiss company to be a front for Bosch and a method whereby Bosch hoped to evade military government laws on the accumulation of foreign assets by a German company and thus pile up foreign assets outside the jurisdiction of the occupational authorities.

The evidence that Bosch and Wilson had engaged in an attempt to outwit military government came from a former director of the Bosch firm who had been connected with the operations of Bosch for many years. This individual stated that, in reality, the IPTC was not a private baby of Wilson as Bronson continually asserted, but a company established after a conference between Wilson and Bosch officials in Switzerland, held in the summer of 1947. The purpose of this company was to build up Bosch's foreign assets and the capital for the enterprise came through Bosch. Its directors also were declared to be in the employ of the German firm. We have already seen that Bosch was adept in the utilization of various cloaking devices to hide its ownership of domestic or foreign companies. It is a charge which cannot, therefore, be lightly ignored. The IPTC, moreover, employed as its chief agent, a Swiss national who had been the liaison for Bosch during World War II. This person now became the general manager of the IPTC. Among his activities was the reestablishment of Bosch affiliates in Spain and Portugal, two countries with which German firms were expressly forbidden to do business under existing United States laws. While these charges that IPTC was a dummy for Bosch were expressly denied by Wilson,

it is a fact that top officials of military government never endeavored to find out whether they were true or not.

But aside from these aspects of Wilson's activities and the actual ownership of IPTC, lawyers for the decartelization staff declared the contract itself to be a violation of Law 56. The contract provided for the maintenance of international cartel agreements by requiring the IPTC to protect Bosch from any limitation on the sales of its products in any country whether that country was within or outside the agreement. The contract further bound IPTC not to deal in any competitive products, as such products would compete with Bosch regardless of price, performance or method of manufacture. IPTC was obligated to compel its subcontractors to adhere to this principle. The contract was declared to be exclusive geographically since it covered the entire world and all-inclusive since it pertained only to Bosch products.

Decartelization staff lawyers declared the contract was made and the IPTC established for the purpose of providing Bosch with an ostensibly independent company for the re-establishment of Bosch's international network of sales and distribution outlets under the control of Bosch, and intended to build up reserves of foreign exchange outside the combined zones of occupation. Under military government laws, a German company was prohibited from making and entering into such an agreement. This would be true even if the IPTC were not a front for Bosch. In substance, then, Wilson, with the support of military government officials, had sought

to evade military government regulations, and his actions were therefore clearly in violation of occupation laws.

It is certainly strange, therefore, to realize that neither Bronson nor Hawkins made any effort whatever to inquire into the nature of Wilson's activities nor to demand any information on the individuals associated with the IPTC. The casualness with which they approved an agreement clearly in violation of laws they were pledged to uphold, throws a revealing light on the whole attitude toward decartelization and on the nature of the behind-the-scenes efforts to bury decartelization, and the sabotage of their solemn obligation to carry out the laws of the United States.

We need only refer to Bronson's behavior after the discovery of the contract and the nature of Wilson's activities. Afraid of the repercussions from his high-handed manipulations in favor of Wilson and Bosch, Bronson made a gesture toward ascertaining the opinion of his legal staff. Without exception, all of the members of the staff consulted declared the contract to be a violation of Law 56 and British ordinance 78.

To add to Bronson's discomfiture, Brigadier Oxborrow, British chief of decartelization, officially denounced the contract as illegal and protested Bronson's unilateral action which Bronson explained as due to difficulties of communication between himself and the British. Subjected to such pressure, Bronson stated that perhaps he had gone "out on a limb" in this matter and had made a mistake.

In any case, Bronson agreed to have the whole case reviewed and requested staff members, in conjunction with the British, to prepare a memorandum outlining why the Bosch-IPTC contract should be nullified for dispatch to JEIA. Such a memorandum was prepared for the signature of Bronson and Oxborrow. Bronson accepted the memorandum but never signed it. Instead he hurried to Berlin for consultation with Hawkins, telling the latter that maybe they had both stuck their necks out too far. Hawkins recommended that the Legal Division of OMGUS be asked for an opinion. After due deliberation, Colonel Raymond, chief of the Legal Division of OMGUS, came forth with the answer. Raymond's advice was a masterpiece of noncommitment. After outlining the relevant sections of military government law which would prohibit Bosch from making such a contract with a foreign company, he declared that no facts had been presented by which a conclusive judgment could be made. Without approving or disapproving, the Legal Division, in effect, declared the deal to be a fait accompli.

The final nail was thus driven into the fiasco of the Bosch case. Whether action against Bosch will ever be taken remains to be seen. The final draft of the Bosch order, in any case, was so innocuous that Bosch could afford, with Wilson's approval, to submit to a deconcentrating action which, at best, would only be a pious gesture.

Will the United States have to seize Bosch for the third time?
